Downloaded from https://www.holybooks.com

This is a reprint of the English Translation of the Nyāya Sūtras of Gautama by Mm. Dr. Ganganatha Jha, the versatile Sanskrit scholar who will ever be remembered for his dedicated and selfless pioneer work and immense contribution in the field.

The work was first published serially in the *Indian Thought* (Vols. IV-XI), a quarterly journal devoted to Sanskrit learning, over a period of eight years from 1912 to 1919.

Dr. Jha's translation covers a large field and includes, besides the original *Sūtras* of Gautama, the *Bhāsya* of Vātsyāyana and the *Vārtika* of Uddyotakara in full as well as relevant notes from Vācaspatimiśra's *Nyāyavārtika-tātparyaţikā*, Udayana's *Tātparyaparisuddhi* and Raghūttama's *Bhāsyacandra*. The work naturally became enormous in bulk and it is not surprising that it took for its completion so many years and so much energy of the author and as many as 1800 pages in print.

This reprint of the great work is issued in response to the increasing demand of the scholars.

#### PUBLISHER'S NOTE

This is a reprint of the English Translation of the Nyāya Sātras of Gautama by Mm. Dr. Ganganatha Jha, the versatile Sanskrit scholar who will ever be remembered for his dedicated and selfless pioneer work and immense contribution in the field.

The work was first published serially in the Indian Thought (Vols. IV-XI), a quarterly journal devoted to Sanskrit learning, over a period of eight years from 1912 to 1919.

Dr. Jha's translation covers a large field and includes, besides the original Sütras of Gautama, the Bhāsya of Vätsyāyana and the Vārtika of Uddyotakara in full as well as relevant notes from Vācaspatimiśra's Nyāyavārtika-tātparyaţīkā, Udayana's Tātparyaparifuddhi and Raghūttama's Bhāsyacandra. The work naturally became enormous in bulk and it is not surprising that it took for its completion so many years and so much energy of the author and as many as 1,800 pages in print. Perhaps this also explains why in spite of the great utility and importance of the work no publisher could venture to bring it out in a book form during the past so many decades.

We are offering with great pleasure to the interested readers this reprint of the great work in response to the increasing demand of the scholars and believe that it will be received in a befitting manner.

It may here be noted that the system of transcription used when this work was written more than half a century ago, has a few variations, some rather odd-looking, from the system in use now.

Not being learned in the 'Science' or 'Art' of 'Chronology,' I have secured a contribution on that subject from my colleague, Pandit Gopinatha Kaviraj, which is printed here as the 'Introduction'; and I am thankful to him for having thus removed a serious defect from the present work. It remains for me only to indicate in brief the materials that I have made use of in preparing this translation. For the Bhāşya I have relied mainly upon the Edition published in the 'Vizianagram Sanskrit Series' and for the Vārtika on the Edition in the 'Bibliotheca Indica'; for the latter I was also helped, after having finished Adhyāya I, by the Second Edition (or rather 'reprint') of the work in the Benares Series. In the case of the former I was helped by the following manuscripts :--

I. Palm-leaf styled in the notes as 'Puri Ms. B' which contains the Bhāşya from 1-2-4 to the end.

II. Palm-leaf styled as 'Puri Ms. A,' containing the Bhāşya from the beginning to 3-2-42.

III. A palm-leaf Ms. of the Sütra only.

These three were kindly lent to me by the revered Shankarāchārya of Govardhanamatha, Puri.

V. A palm-leaf Ms. of the Bhāsya, Adhyāya V only-styled 'D.'

VI. Paper Ms. of the Sūțra only belonging to Jagadish Mishra.

VII. Paper Ms. of Sūțra only belonging to Babu Govindadasa.

Every one of these manuscripts was found to be quite correct, specially the first two, which proved of incalculable help in fixing the text of the Bhāşya in several places.

For the *Tatparya* I have used the edition in the 'Vizianagram Sanskrit Series.' For the *Parishuadhi*, I have had to rely upon a manuscript secured for me several years ago from Madras, by my friend Babu Govindadāsa.

Of the *Bhāṣyachandra*, I had a single manuscript, obtained from Babu Govindadāsa's valuable collection.

In addition to these I have also used, for my notes, (a) the Bodhasiddhi also called Nyāyaparishişta of Udayana, and the Anvīkṣānayata!tvabodha of Vardhamāna; — manuscripts of both of them having been secured for me by Mahāmahopādhyāya P. Vindhyeshwari Prasad Dube of the Sanskrit College Library.

The translation of Vätsyäyana was taken up in sheer "bravado," if the use of such a term be permissible in this connectior. The first scholar to try his hands on it was the late Dr. Ballantyne, who handed down the task to his pupil Mahāmahopādhyāya P. Keshavashastri, who carried on the work up to a few pages and then apparently gave it up. Subsequently the work was taken up by a friend of mine at Caloutta; but when I asked him, after a few years, how far he had progressed, he told me frankly that the work was terribly difficult and so he had given it up. Then and there I made up my mind to undertake the work,—and to make the task still more difficult, and hence worth doing—I took up the *Vartika* also.

How far I have succeeded in this audacious task, it is for the learned to judge, and in their hands I leave it, desiring no better tribunal to adjudicate upon my work and upon my reputation.

With this brief preface I lay my work at the feet of those to whom I owe all I am and all I have-

#### INTRODUCTION.

#### I.—PRELIMINARY.

The Works, of which an English translation has been offered for the first time in the following pages, consist of (a) Nyāya-sūtras by Gotama, (b) Nyāya-bhāşya by Vātsyāyana and (c) Nyāya Vārtika by Uddyotakara. Vāchaspati Miśra's Tātparyatikā, Udayana's Tātparyapariśuddhi and Raghūttama's Bhāshyachandra, have been utilised only in so far as they have been deemed useful for illuminating the more obscure points in the Sūtras or in their Commentaries.

The history of Nyāya remains still to be written, and it is not known with certainty how and when this system came to be associated with Vaisheşika. In the Nyāya. bhāsya, and naturally in all subsequent works based upon it, we find the two systems generally mixed up. The Vaishēşika cetegories are everywhere tacitly assumed in Nyāya, and. though on certain points, metaphysical (e. g. 'pilupāka ' versus 'pitharapāka') and epistemological (e. g. recognition of the number of pramanas, viz. four in Nyaya and two in Vaisēshika), the two schools diverge from each other, their general harmony is still very remarkable and would seem to be fundamental.. In the present state of our knowledge it is not possible to discriminate the two systems with any degree of accuracy, except by characterising one as mainly logical and methodological and the other as metaphysical. And besides this there are other factors to be counted. There have been theological influences at work in the elaboration of the ideas of each school. The allied Jain and Buddhist thought of the age must also have had some effect

<sup>°</sup> Cf. in this connection Dr. D. Faddegon's "The Vaicesika System," pp. 48-49.

on the system as a whole. The age in which the early Nyāya literature was written was an age of polemics, and until the history of contemporary thought, especially what is revealed in the oldest Buddhist and Jain literature, comes to be written, all speculations regarding the fundamental character of this literature are bound to be more or less unsuccessful. Then again, there is the almost insurmountable difficulty of determining, in the case of the Sūtras and the Bhāşya, whether the whole work proceeded from one author or consists of parts ascribable to different authors belonging to different times. The subject is complicated, and a study of the Bhāşya and of the Vārtika is calculated to be very helpful in this direction.

# II.—THE NYÄYA SŪTRAS AND VÄTSYÄYANA BHÄSHYA.

(1) OPINIONS OF SCHOLARS.

#### (i) On Nydya Sutras.

The Nyāya system of philosophy, like every other Indian system, is based upon a body of aphoristic sayings, called 'Sūtras,' which are ascribed by tradition to one Aksapāda (called in Chinese soc-mock, lit. 'foot-eye'), more popularly known as Gotama or Gautama. Who this Gotama was and in what time and country he flourished are questions to which no satisfactory answer can be given. Scholars have of course attempted to offer an answer, but all in different ways.

(a) Mahāmahopādhyāya Haraprasāda Sástri (J. A. S. B., 1905, pp. 177-180) tries to show, on Chinese evidence, that Akṣapāda, the "founder" of Nyāya, was a pre-Buddhistic teacher, but he adds that the Sūţras as we have them are comparatively modern, being probably post-Mahāyanic in age. He places them in the 2nd Century A. U.

(b) Mahāmahopādhyāya Dr. Satis Chandra Vidyābhūshaņa (Introduction to "The Nyāya Sūtrās of Goțama," S. B. H, pp. v-viii; Bhandarkar Commemoration Volume, pp. 161-162) believes that the author of the Nyāya Sūtras, who was identical with the author of Gautama Dharma Sūtras and of the Pitrimedha Sūtras and was an inhabitant of Mithila, lived in the 6th Century B. C. and was a contemporary of Buddha. He was the author of the *first* chapter of the work, the later chapters being subsequent additions.

(c) Professor Jacobi (J. A. O. S., XXXI, 1911, pp. 2, 13) says that the Sutras and the Bhāṣya are later than the origin of Sūnya Vāda (*i. e.*, end of 2nd Century A. D.) and earlier than that of Vijñānavāda (*i. e.*, end of 5th Century A. D.), and that the interval between the Sūtras and the Bhāṣya need not be supposed to have been more than a generation. He assumes, it seems, that the whole Bhāṣya is one uniform work (cf. Ibid, p. 6).

(d) Professor Steherbatskoi ("Epistemology and Logic as taught by the later Buddhists," as summed up in J. A. O. S., 1911, pp. 4-5), on the contrary, sees in the Sūtras and the Bhāşya marks of acquaintance with Buddhist Idealism, whence he declares them both to be posterior to 500 A. D. This view has been refuted by Jacobi.

(e) Bodas (Introduction to Tarkasangraha, B. S. S., pp. XXX-XXXII) says that the work of Kanāda, as we possess it, can not be anterior to 400 B. C. and posterior to 500 A. D., which is the date of Vātsyāyana. Vātsyāyana under Ny. Sūt. 2-2-36, refers to Vaiś. Sūt. 3-1-16. The Sūtras of Gotama are older than those of Kanāda. He says definitely that Gotama's text belongs to 400 B. C. on the ground that Shabara Svāmi (Bib. Ed., p. 10) quotes from Upavarşa a passage shewing that Upavarşa was familiar with Gotama's system. If this Upavarşa be identical with the minister of Nanda there is no inconsistency in placing Gotama in the 4th Qentury B. C. or a little earlier, (f) Professor Suali (Introduzione allo Studio della Filosofia Indiana, p. 14, accepts in the main Jacobi's conclusion but remarks that though the time of Vätsyäyana may be accepted as right, that of Gotama is doubtful. One generation is too short an interval to be placed between the Bhäşya and the Sütras. He would suggest an interval of 100 years, if not more, thus referring the Sütras to about 300 or 350 A. D.

(g) Professor Garbe (Die Sankhya Philosopie, p. 33) considers Nyāya to be the latest of the six orthodox systems and says that no trace of it is to be found before the Christian Era. He states no grounds for his conclusion, but he notes that the Nyāyadarśana as such was known to Pañchaśikha whom he believes to have been a contemporary of Sabara, living sometime between 100 and 300 A. D.

#### (ii). On Vālsyāyana Bhāsya.

Regarding the Bhāşya too there is a wide diversity of views.

(a) First of all we may refer to the theory of Dr. Windisch who, in his excellent pamphlet "Uber Das Nyāya Bhāshya," pp. 14-15, has sought to prove that the Nyāyabhāshya must be ascribed to the same period in which the Mahābhāshya was written, *i. e.*, about 200 B. C. He shows by means of illustrations that both the works are more or less similar in structure and style and that both contain a number of pregnant sentences which are of the same type. In the case of Mahābhāshya, Kielhorn has established this satisfactorily (cf. his booklet "Kātyāyana and Patańjalio"). These sūtra-like short sentences never end in **gfd** and must be the work of a predecessor. It is interesting to find that the explanations of these generally end in **gfd** i These explanations, in the case of the Nyāyabhāshya, usually end in **gfd**  which Kielhorn showed as belonging to the explanation-part and not to the Vārtika itself. The sūtra-like sentences would in course of time (as their origin was forgotten) come to be regarded doubtfully as Sūtra or Bhūshya This has been, we know, really the case.

(b) Dr. Vidyābhūshaņa (Introduction, p. X) places Vātsyāyana, whom he makes a native of Southern India, about the middle of the 5th Century A. D. or (Bhandarkar Volume, p. 163; Ind. Ant., 1915) about 400 A. D. The whole work is evidently by one author. The Nyāya Sūtras 4-1-39, 4-1-48, 2-1-19, 4-2-32, 2-1-37 and 4-2-26, 3-2-11 are interpolations from Mādhyamika Sūtra and Laukāvatāra Sūtra, which somehow crept into the text before or during the age of Vātsyāyana.

(c) Mm. H. P. Sastri (J. A. S. B., 1905, p. 178) makes Vātsyāyana post-Mahāyānic, *i. e.*, a successor of Nāgārjuna and Āryadeva.

(d) Stcherbatskoi's view (loc. cit.) is that Vätsyäyana lived long after 500 A. D. Both the Sütras and the Bhäshya are supposed to contain references to Vijñäna Väda and must be posterior to the date of its origin in the 5th Century.

(e) Jacobi (*loc. cit.*) places Vātsyāyana about the beginning of the oth Century or earlier. He accepts Windisch's Vārtika theory and allows an interval of about a generation between the Sūtras and the Bhāshya.

(f) Suali (loc. cit.) accepts Jacobi's date for Vātsyāyana, as already noted.

(g) Bodas (Introduction, p. XLI) assigns Vātsyāyana to the end of 500 A. D. on the ground that "he preceded the well-known Buddhist teacher, Dinināga, who is said to have lived in the early part of the 6th Century."

#### (2) REVIEW AND REMARKS.

We have attempted to give above the views of some of the best authorities on the chronology of the Nyāya Sūtras and Vätsyäyana's Commentary upon them. The time of the Sutras is found to range from the pre-Buddhistic or Buddhistic age to about 600 A. D. So about Vātsvāyana the dates assigned vary from 200 B. C. to about 700 A. D. This wild confusion is a sure indication of the fact that we are travelling on insecure ground. And as a matter of fact it is not possible to be quite precise when the premisses are so shaky. The Sūtras and the Bhāshya do not seem to have vet been studied with that minuteness and thoroughness which their nature demands A critical edition of the Sutrapātha of Nyāya, based upon a collation of all available Mas. of different recensions and of the Sutras as accepted by the various glosses and commentaries still existing, is the greatest desideratum of the day, and until this is done it is vain to endeavour to determine the sulrates of a particular aphorism. In the translation efforts have been made to determine this, as far as possible. From the very nature of the present work, the translator has had to rely upon the verdict, direct or implied, of the Bhāsya, the Vartika, and the Tälparya, and also upon Vāchaspati Miśra's Nyłyasāchīniban lha; but help was also derived from two old manuscripts, obtain. ed from two different sources.

The question of Bhāshya is even more complicated, as Mss. of this work are comparatively very rare. In these circumstances therefore all such theories as have a bearing more or less direct on the character of the text have to be accepted as only tentative. Then again there is the inevitable danger of a tendency to read modera thought into old words. If there be a passage illustrating an old theory which has died out but which survives in its developed for m in a recent but better known Vada it is very likely that we shall understand it as representing the latter. The early history of Indian thought being not known in detail it becomes really very hard at times to identify a particular doctrine.

Professor Stcherbatskoi's theory does not seem to call for any new comments. Jacobi has already treated it at some length and tried to shew that neither the Sūtras nor the Bhāshya can be proved to contain allusions to Buddhist Idealism, so that they must be earlier than the age of Asanga and Vasubaudhu (500 A. D.). Vāchaspati's interpretation of Sūtras 4, 2, 26 35 as directed against Vijnānavada is erroneous. So far it is all right. But Jacobi, Vidväbhüshana. H. P. Sästri and Suali all find in the Sütras and Bhäshva traces of Sūnyavāda. This seems to me problematic. That there is a doctrine much allied to the later Buddhist Sunyavada need not be gainsaid. But it does not seem to have yet been established that this doctrine is really the same as the so-called Súnyaväda of Nāgārjuna's school. And even if it is there is no necessity to assume a priori that the whole work proceeded from one pen and belongs to one, viz., the post-Nagarjuna, period.

## (3) The Age of the Sūtras an the Bhāshya.

Assuming that all the Nyāya-sūtras, as we have them to-day, are not genuine and that some of them may possibly represent later interpolations<sup>\*</sup>, there is no reason to deny that the general framework of the system is of a much earlier date. There is nothing to contradict Dr. Vidyābhūshaņa's view that the Sūtras belong to 600 B. C. Mm S´astri's opinion that Akshapāda was pre-Buddhist and was the founder of the school is also acceptable, but where is the proof to shew that all the Sūtras came after the development of the Mahāyānic School and that even some of them were not composed by Akshapāda himself?. The suggestion of the

<sup>\*</sup>Cf. Faddegon, "the Vaicosika System," pp. 46-47.

Sūtras having passed through several redactions may be accepted in the main, but this does not militate against the antiquity and genuineness of some parts of the work at any The introduction of Yoga in a work on Nyāva is not rate. altogether inexplicable, if we remember that both Yoga and Nyāya (including Vaiseshika), as systems of theological philosophy, belonged to the Saiva School. The very word Iśvara, (as distinguished from 'Purushottama' of Sāikhya which, as Haribhadra points out, was affiliated to Vaishnavism) signifies Siva. Even in later times the Saiva Naiyāyika Bhāsarvajũa (800 A. D.) introduced Yoga in his Nyāya tract, viz., Nyāya Sára. The section on Yoga in Gotama's work (Sūtras 4, 2, 38-48) does not bear on it any special mark of later development. The "peculiar character" referred to by the Sästriji is not apparent to me.

It is interesting to observe that the several doctrines which have been introduced in the 1st Lecture of Chapter IV as **quaran**: does not refer explicitly either to Sünya Vāda or to Vijñāna Vāda. They may well stand for theories so widely current in Buddhistic and post-Buddhistic (but generally pre-Christian) times, and a detailed examination of these in connection with the history of contemporary thought is sure to be highly profitable and enlightening. The Sütras and the Bhāshya must be subjected to such an examination before any final opinion regarding their age can be fitly pronounced.

This is not the right place to enter into a discussion of this kind, but we may just note a word or two here briefly in order to suggest that this line of pursuit is likely to yield valuable results.

(1) First of all, we may refer to the doctrine as stated in Sūtra 3-1-52, which states that **Ray** 'touch' is the only sense-organ, the other so-called sense-organs being only modifications of it. This is a queer, but a very old view, and we find it as early as 500 B. C. in Greeco, where Democritus

(and later on Aristotle too) advocated a similar theory. And even in modern Nyāya, though the unity of sense-organs has been rejected as such the importance of tas and its distinctive character have been strongly emphasised. The doctrine of स्वज्ञमनोयोग, i. e. the view that relative consciousness is possible only when there is contact between manas and trak, is based upon the recognition of the fact that the function of स्वक in our mental life is unique.\* But the doctrine as mentioned in the sutra asserting that रवन, is the only sense-organ stands by itself. It is unknown to any of the existing systems of philosophy. But we know that it is the old Sänkhya theory. Both Ratnaprabhā and Bhāmati under Ved. Sūt. 2-2-10, attribute it to Sānkhya. It does not exist in the Kārikā of Īśvarakrishņa and appears to be much older than this author. The date of Isvarakrishna is uncertain. Dr. Keith (Sankhya System, p. 69) places him about 450 A. D. and Dr. Vidyābhūshaņa's opinion is very much the same (Med. Logic, p. 83). For reasons into which I cannot enter here I feel inclined to assign a much earlier date to the work. Probably the publication or Māthara Vritti undertaken by Dr. Belvalkar will help to clear up much confusion on the matter. At any rate it seems probable that the view on rem was very old and Gotama's allusion to it is a probable sign of the antiquity of the Sūtras.

(2) Then we may pass in review the various Vādas discussed in the 4th Chapter, Lecture 1. We should remember that these were all extremist theories (**CANART:**) in connection with the origin and nature of the world.

(i) The first Vada (4. 1. 14-18) which affirms the origin of things from pre-existing जामाव, is as old as the Upani-

<sup>•</sup> It is for this reason that in Sushupti or dreamless sleep, when the manas happens to be within the 'puritat' beyond the sphere of **rear** it enjoys rest and there is abeyance of conscious life altogether. For details see my forthcoming work 'Nyšya Vaiseshika System of 'Thought' (Part III, Section on Psycho-physics, &c).

shads and is found in the Pali literature. It amounts to a denial of what is technically called उपादाननियम ।

(ii) The next Vāda known as Īśvaravāda (4. l. 19-21) declares that the Ultimate Nimitta of production is God and not पुरुषका or पुरुषकार । This is the ultra-theistic position which disavows the efficiency of human will altogether and assigns every product to the direct intervention of a Divine Resolve. The human will is said to be efficient in subordination to actustion from Above. The Ancient Pali and Prakrit literature is replete with accounts of similar theories. The statement अवो जम्तूरनीशोऽयमात्मनः झुजदुःजयोः । ईश्वरप्रेरितो गच्छेत स्वर्गं वा रवसमेव वा॥ (M. Bht. वनवर्ष, 83. 28) says plainly that pleasure and pain, i. e. the fruits (कल), come directly from God and not from human effort, for the simple reason that man as such is ignorant (आप) and impotent (जनीश) in regard to his pleasure and pain. The new is God. Such fractate exists in the Upanishads, † and we may detect it in some shape in the Pāśupata Darśana of Mādhavāchārya's Sarvadarśanasangraha. This is of course slightly distinguished from the Isvaravada of which the Sveta° Up° (1, 2) speaks.

(iii) The next theory (4. 1. 22-24) leads us to a denial of all kinds of *nimittas*. This is evidently an aspect of **EANA**. **EAN I** Cf. Asvaghosha's Buddhacharita, 9. 52. Here too the freedom of will is repudiated. This doctrine is really the same as **ufuenegevene** described in the Brahmajālasutta of Digha Nikāya. In the Samangala Vilāsini (1. 118) Buddhaghosha explains the term as 'springing up without a cause, and in the Udāna (6. 5) it is said to signify negation of origin from a cause, whether intrinsic (**EER STATE**) or extrinsic (**EER** 

<sup>•</sup> Probably this was a reaction against the extreme Mimánsā theory of Karma. The theory is as old as Buddha's day. And it is not impossible though not likely, that the word unread in the phrase ' gauge ' etc. implies material (unread) as well. In that case it would be an allosion to the early Brahmaväda. In this connection the reader is referred to the noise given in the present translation in loco, † Cf. Kaush. Up., 3. 9.

**state:**). This is **tanuage** pure and simple, and was an old doctrine, associated, in one of its phases, with the name of Makkhaliputta Gosāla who denied not only freedom of will (**gtant**) but also all forms of causality, **ig** or **state**. This doctrine is also called **utgate** and was one of the three views which the Com. on Dhammasangani characterises as incorrigible and hopeless.

(iv) Now the rejection of **स्वभाव**, own nature or individuality of a thing ends in **অमाववात्**—a doctrine which is discussed in Sūtras 4. 1. 87-40. This **অमाववात्** is the preliminary to the historical Sūnyavāda.

(v) This is closely related to the other doctrine, i.e. **स** वॉनिस्यतावाव, viz., that everything is impermanent. This is the logical antecedent of *technical* **स**विकवाव of subsequent centuries and was an old view. This view is a truism of Buddhist Literature and need not be stated in detail.

(vi) The opposite doctrine, viz., सर्वनित्यतावाद (Sutras 4.1 29-33), was also current very widely in early times. The name mutantit used sometimes to be given to an aspect of this doctrine, though of course with a slightly different shade of meaning. The entited are, i e., the belief that 'Everything Is,' of which the Satkāryavāda of Sānkhya was a later modification, was the earliest and most general form of this doctrine. Professor Garbe, in his 'Sānkhya Philosophic,' notes that the Sāśvata Vāda as discussed in the Brahmajslasūtta is the Sānkhya view. That Garbe is right would appear from the following declaration in Vyāsabhāshya (under Yoga Sūt. II. 15) : उमयप्रत्याक्याने (i.e., on denial of उच्छेर्याद and देत्रवाद both) च शाश्वतवादः, इत्येतत् सम्यक्दर्शनम् । And on the other hand we observe that the सर्वनित्ववाद discussion turns on a view which from the very language of its expression we recognise at once to be of the Yogins. Cf. Nyāya Bhāshya:

Samaññaphala Sutta in D. Nik., 2. 20; Uvāsagadasāö 7. 166 (Hoerale's Ed., p. 97),

# अवस्थितस्योपादानस्य धर्ममात्रं निवर्त्तते धर्ममात्रमुपजायते, स बलु उत्पत्तिविनाग्रयोविषयः । यज्ज्वोपजायते तत् प्रागप्युपज्रननादस्ति । यज्ज्व निवर्जते तज्ञिवृत्तमप्यस्तीति (under Nyāya Sūtra 4-1-32),

(vii) सर्वपृथक्त्यवाद (Suts. 4.1.34-36) was also known to the earlier Buddhist literature. This view is intimately connected with पुद्धवाद and therefore with सवयवादयविदाद in general. The notion that the whole is a mere aggregate of parts and not a distinct entity from them, *i.e.*, that द्वड्य is only a name given to a definite collocation of gunas, was very old indeed. Away from the Buddhist philosophers it was also partly recognised by Patańjali in his Mahābhāshya (c.f. gunanau).

(viii) The **cital area a** is very mysterious. Vätsyäyana's interpretation is not clear. It was a doctrine of number, propounded to account for the origin or nature of things. The word **unit** implies that it was an extreme view. Could it have any connection with the Vedic notion of **gr**; or with some form of the Pythagorean Theory of Number?

All this is guess-work, but very probable. At all events it is plain that the thesis regarding the late origin of some of the Sūtras, especially those referring to the several doctrines, is not conclusively demonstrated, though it may be admitted that interpolations do exist in the Sütra and in the Bhāshya. The similarity of ideas, and even in some cases of stray words, does not necessarily prove, as Paudit Phanibhushana Tarkavāgiša rightly remarks in his introduction (P. 34) to his excellent Bengali translation of Nyāya Sūțra and Bhāshya, reference to any particular theory of later years, unless it is olearly stated. We know from a study of Indian philosophy and Literature that certain stereotyped sayings have come down from ancient times, and though these may be found in different works they need not be ascribed to any of them. By way of illustration it may be said that Nyāya Sūtra 4-2-32 reminds one of a similarly-worded saying in Patafijali's

Mahābhāshya (under Pan. 4-1-1): झलत्तु मुगतृष्णावत् गम्धर्वनगरं यथा। आदिस्यगतिवत् सच्च वस्त्रान्तर्हितवच तत्। Even this verse which is split up into 4 parts and commented on by Patañjali is apparently older than his own time.

What is said of the Sūtras applies to a certain extent to the Bhāshya also. The interval between the two is not known, but it is certain, as Windisch has already established, that the Bhāshya was not the immediate successor to the Sūtras. There had been a Vārtika of which some fragments exist, not only on the 1st but even on subsequent chapters. *Cf.* the vartika: **ggfāfigen***c***n***i***caci***i***cacicicicis** but even on subsequent chapters. *Cf.* the vartika: **ggfāfigen***c***n***i***cacicis** been explained by Vātsyāyana which practically exhausts the whole Bhāshya on the Sūtra. Considering this fact, a space of 300 or 400 years would not be an unreasonable interval to suppose between the Sūtras and the Bhāshya. In other words Vātsyāyana may be assigned to the 2nd or 3rd Century B. C. \*

This date would not be incompatible with the general style and structure of his language. The peculiar use of certain particles, viz., **c**(**a**, **uu**, **uu**, **uu**, **au** and more particularly of would seem to be an indication of the antiquity of the work. The use of **a** in prose, which reminds one of the Brahmans and Pali texts, in remarkable and almost decides the question.

As to the further question of his identity with Kauțilya and with the author of Kāmasūtra a negative answer has to be given. There does not seem to be any historical evidence in support of this identity. Kautilya's attitude towards **mreficial** and his style of composition are in direct antithesis to the Nyāya Bhāshya; and as for the Kāmasūtra it is decid-

<sup>•</sup> It must be confessed that this view too, like the others contested, is no better than a tentative assumption, but it works better on the whole. Any definite conclusion regarding the date of these works must be put off till the results of researches into the history of *Pre*-Christian thought of India are available to us.

edly a later composition. The testimony of lexicographers where these names are put together as synonymous does not go far enough.

## III.—NYÁYA-VĀRTIKA.

The date of Uddyotakara, the author of Nyāya Vārtika, is capable of more exact determination. It is beyond doubt that his Nyāya Vārtika was intended to be a defence of the Bhashya against the attacks of the Buddhist philosopher Dinnaga, whose time is now generally believed to have been the end of the 5th Century A. D. Thus the age of Dinnaga establishes the terminus a quo for the date of Uddyotakara, and the terminus ad quem is furnished by a reference to his name in Subandhu's Vāsavadattā: =यायदिपति. मिवाचोतसरस्वक्रपाम (Hall's Edition, p. 235). Subandhu was unquestionably prior to Bana (700 A. D.) who eulogises on his Vāsavadattā in the Harshacharita (e. g. कवीनामगतादूव्पे! नूनं and probably, as Dr. Gray says (Introduction to the Eng. translation of Vāsavadattā, pp. 8-12), he may have lived in the latter part of the 6th Century or beginning of the 7th Century. From these evidences it would follow that Uddyotakarā's literary activities belonged to a period in 600 A. D.

The statement of Vāchaspati with reference to the Vārtika (subscription and seven as late as Vāchaspati's day the Vārtika had been an old and antiquated work and apparently fallen into discredit. The expressions angescure and garce fores is manified read together imply that the work had been already overloaded with wrong interpretations. All this involves a long interval of time between Uddyotkara and Vāchaspati, though the date for Vāchaspati as given in his Nyāyasüchīnibandha be understood to refer to Saka Era (898=976 A. D.), instead of Samvat which to me seems the most agreeable assumption.

'Till Subandhu's day Uddyotkara's work had been in the height of its glory, after which some powerful Buddhist Logicians directed their polemic attacks against it in defence of Dinnaga, and overthrew its reputation. Who these Buddhist Logicians were we do not know. Dharmakirti might have been one of them, and there might have been others from the Buddhist Universities, viz., Nalanda and Vikrama Silā. The Buddhist Logic was in its fullest vigour in those days. But it is certain that in this pretty long interval there arose no eminent scholar<sup>•</sup> who could come forward and champion the cause of Orthodox Logic-a task which was left for Vāchaspati in the 10th Century (or more probably in the 9th Century) to accomplish. The word ufascali would therefore imply great antiquity (which though not very great would appear as such on account of the neglect of the text) of the Vārtika as well as the unsettled condition to which it was reduced, Udayana informs us that in the work of restoration of Uddyotakara's text Vāchaspati was indebted to (his teacher or विद्याग्र as Vardhamāna says) Trilochana.

Dr. Vidyåbhushana's identification of Vådavidhi and Vädavidhänatikä with Dharmakirti's Vädanyäya and Vinita Deva's Vädanyäya Vyäkhyä is not more than an assumption. Dharmakirti was a later writer who did much, it seems, to throw Uddyotäkara's work into disgrace. If Dharmakirti's date be accepted as 635 A. D. (Med. Logic, p. 105)—a date which synchronises with the time of S'ri Harsha, the patron of Bäna, who refers to Subandhu in whose romance, as we have seen, the name of Uddyotakara occurs as the author of a Nyäya treatise—Uddyotakara must be pushed back much earlier. The hypothesis that all these famous writers were contemporaries does not rest on any

<sup>•</sup> Udayana refere to this fact उचोतकरसम्प्रदाया अमूर्चा (गवीनां) यौदनं, सच कालवशाद् गत्तिनसिव । Tat, Pari., P. 9.

positive basis. The two works mentioned in Nyāya Vārtika can not yet be determined. Pandit Phaņi Bhūshaņa's suggestion that Vādavidhānațīkā might have been a commentary on a work by Subandhu—the Buddhist Naiyāyika who had been one of the main objects of Uddyotakara's assaults—is indeed a happy suggestion† but no *definite* conclusion can be arrived at from these uncertain data.

Uddyotakara was very deeply and widely read in Buddhist philosophy (post-Mahāyānic), and we find everywhere in his work the unmistakeable stamp of a learned and eloquent personality. There are several quotations and hidden allusions to Buddhist literature in the Vārtika which are yet untraced, and it will be some time perhaps before any light can be expected to be thrown upon these obscure passages. What for instance was the Sarvābhisamaya Sūtra to which the Vārtika refers (Ben. Ed. p. 339) and from which it has taken an extract ? It seems from the language to have been one of the earlier Buddhist Sūtras and was devoted to the exposition of pudgalavada against nairalmyavada. May it be identical with the well-known 'Bhārahāra Sūtra' mentioned in Prajñakara Mati's Bodhicharyāvatārapañjikā (P. 474) and other Buddhist works? Cf. Ponosin's note in J. R. A. S., P. 308.

# IV.—TÁTPARYAŢĪKA, TĀ FPARYA PARISUDDHI AND BHÄSHYA CHANDRA.

#### (a) $T \bar{A} T PARYAŢIK \bar{A}$ .

Vāchaspati's age is too well-known to call for any special notice. But the identification of the era mentioned in his Nyāyasūchīnibandha, viz., 898 (परवृष्टपु) is an open question still; some hold that it stands for Vikrama Samvat, while others protest against this view and accept the Sakābda.

† See his Introduction, p. 39.

<sup>•</sup> For Dr. Vidyabhüshaņa's arguments See J. R. A. S., July, 1914 ; Bhandarkar Com. Volume, pp. 163-164.

**INTRODUCTION** 

In the former alternative the year corresponds to S41 A. D. and in the latter to 976 A.D. On grounds which I have stated elsewhere at length I should prefer the former equation and assign Vāchaspati to the middle of the 9th Century. He was a voluminous author and extremely learned in all the systems of philosophy (orthodox and heterodox), on each of which he is said to have written commentaries.\*

#### (b) TATPARYA PARISUDDHI.

Udayana belonged to the latter half of the 10th Century. He himself mentions 906 Sakābda or 984 A. D. (तकीम्बराह) as the year of the composition of Lakshaņāvali. His Tātparyapariśuddhi is a valuable Commentary on Vāchaspati's work. But he was, more than anything else, an intense and original thinker, and it is in such works as the Nyāya Kusumāñjali and Ātmatattvaviveka that we can find his genius at its best. Besides the Pariśuddhi, in which he had to confine himself to the traditional way of interpretation, Udayana wrote also an independent commentary. named anistatic or anistatic on the Sūtras of Gotama, which work also has been utilised in the notes on Chapter V.

#### (c) BHASHYA CHANDRA.

Not very long ago, Babu Govindadāsa of Benares discovered among a heap of manuscripts said to have belonged to the great Vedānta teacher Madhusūdana Sarasvatī, a manuscript of an entirely unknown commentary on the Nyāya Bhāshya, by one Raghūttama. This unique find he made over to the translator of the Bhāsya, who has utilised it in his 'notes.' The manuscript however extends

<sup>•</sup> There is no evidence, as far as I know, to support this tradition. Apart from the Buddhist systems even the Vaigeshika has been left untouched. Nor does any indication exist in his other commentaries to shew that he wrote on Vaigeshika or on the Buddhist philosophy. That he was a master of all the systems '**Hany cane**' stands of course uncontested.

to only the middle of Adhyāya III, and as the copy appears to be in the author's own handwriting, there is no hope of securing a complete copy. Such as it is, it is being published for the Chaukhambha Sanskrit Series, and Dr. Gangānatha Jhā expects to be able to supply the deficiency in the 'Chandra' with his own gloss, which bears the humble title of 'Khadyota.'

#### V.-CONCLUSION.

The Nyāyabhāshya and the Nyāya-Vārtika are extremely difficult works, not only for obscurity of style and relative frequency of elliptical expressions (specially in the former) but also for the comparative obsoleteness of many of the doctrines which have been therein introduced. The neglect into which the books were allowed to fall during the last millenium, more particularly on the advent of Navya Nyāya in the 15th or 14th Century, helped only in adding to this obscurity. It is a matter of no small congratulation therefore that we have at last an English translation of these abstruse scholia from the mature pen of a veteran and distinguished scholar, and it may be fairly hoped that the publication of these works, now in their English garb, will bring on a revival of interest in the study of ancient Nyāya Stāstra of India.

## THE NYĀYA-SŪŢRAS OF GAUTAMA

WITH

THE BEASYLA OF VATSYAYANA<sup>\*</sup> AND THE VARTIKA<sup>†</sup> OF UDYOTAKARA.

With notes from the Nyāyavārļikaļāļparyatīkā of Vāchaspaļi Mishra ‡ and the Tāļparyaparishuļdhi of Udayanāchārya.

DISCOURSE I.

DAILY LESSON I.

LECTURE (1) §

Enunciation of Subjects, Purpose and Connection of the Treatise.

INTRODUCTOBY-BHASYA.

The Instruments of Right Cognition  $\parallel$  must be regarded as rightly effective, because it is only when a thing is known by means of an Instrument of Right Cognition that there is a possibility of its giving rise to fruitful and effective exertion. As a matter of fact, nothing can be known except through an Instrument of Cognition; nor can fruitful exortion be aroused, except when things have been known; as it is only when the agent has cognised a thing by means of an Instrument of Cognition that he desires either to acquire or to get rid of it; and the effort of the agent stimulated by this desire to acquire or get rid of the thing known is what is called 'exertion'; and this exertion is called 'fruitful' when it becomes related to a result; that is to say, when the person putting forth exertion, on desiring either to

• 'Vizianagram Sanskrit Series,' No. II.

+ 'Bibliotheca Indica.'

1 'Vizianagram Sanskrit Series,' No. 15.

§ This division of the 'Daily Lessons' into 'lectures' is in accordance with the 'prakaranas' of the Nyāyasāck nibanīka of Vāchaspaţi Mishra.

[This word 'pramāņa' is used both in the sense of 'instrument of right cognition (in which case the right cognition is the direct fruit, and ultimate exertion only the indirect fruit), and in that of 'right cognition,' in which case the exertion is the direct fruit. In the present context we take the word to mean 'instrument of right cognition' because of what follows in lines 7-8 below, where the 'prumāṇa' is distinguished from pramiți or Right Cognition. acquire or get rid of the thing, comes, by that exertion, actually to acquire or to discard it, his exertion becomes 'fruitful.'

The 'object' or 'thing' (cognised by means of the Instrument of Cognition) is of four kinds: viz. either, (1) pleasure, or (2) a source of pleasure, or (3) pain, or (4) a source of pain. These objects of the Instrument of Cognition are innumerable; owing to the fact of the number of living creatures being infinite. It is only when the Instrument of Right Cognition duly operates with regard to an object, that due success can belong to the 'cogniser', (who then only can havo any idea of the object),—to the 'cognised object' (which then only can have its true character known),—and to the 'right cognition' (which then only can lead to the due comprehension of the object); because there is no possibility of the object being accomplished, so long as the most effective cause is not present [and it is the Instrument of Cognition which is the most effective cause].\*

'Cogniser' ( $Pram\bar{a}t_{f}ri$ ) means that person who is stimulated to exertion by the desire to acquire or discard the object; that by means of which the person obtains the right cognition of the thing is called the 'Instrument of Right Cognition' ( $Pram\bar{a}na$ ); that thing which is rightly known is called the 'cognised object' ( $Pram\bar{e}ya$ ); and the comprehending or knowledge of the thing is called 'right cognition' (Pramiti). It is on all these four factors that the real nature of things is dependent (for its being accepted, or rejected, or treated with indifference).

"Now what is this 'real nature' (of things)?"

Bha. Page 2. It is nothing else but 'being' or 'existence' in the case of that which is (or exists); and 'non-being' or 'non-existence' in the case of that which is not (does not exist). That is to say, when something that 'is ' (or exists) is apprehended as being or existent—so that it is apprehended as what it really is, and not as something of a contrary nature (i. e. as 'non-being')—then that which is thus apprehended constitutes the 'true nature' of the thing. And analogously, when a non-entity is apprehended as such—i. e. as what it really is, not as something of a contrary nature, —then that which is thus apprehended, constitutes the 'true nature' of the thing (of the non-entity).

<sup>• &#</sup>x27;Anyatamarthah salhakatamartho drastayah' -- Vartika.

"But how is it possible for the latter,—*i.e.*, the nonentity, that which does not exist—to be cognised by means of an Instrument of Right Cognition?"

This is possible, we reply; because as a matter of fact, at the time that the existent thing is cognised (by means of the Instrument of Knowledge), the non-existent thing is not That is to say, there is non-cognition of the noncognised. existent, only at the time that there is cognition of the existent; and this shows that it is only by means of the Instrument of Cognition, whereby the existent is cognised that we cognise also the non-existence of the nun-existent. We illustrate this by reference to a lamp: when the lamp illumines, and renders visible, something that is visible,---that which is not seen in the same manner as that visible thing. is regarded to be non-existent; the mental process being as follows: 'if the thing existed it would be seen,-as it is not seen, it must be concluded not to exist.' In the same manner, at the time that the existent thing is cognised by means of an Instrument of Knowledge, if, at the same time, something else is not equally cognised, the conclusion is that this latter does not exist, the mental process being as follows: 'if the thing existed, it would be cognised, -as it is not cognised, it must be concluded not to exist.' Thus we find that the same Instrument of Cognition which manifestsmakes known-the existent thing, also manifests or makes known, the non-existent thing.

The 'Entity' is going to be described by means of a comprehensive group of sixteen.

<sup>•</sup>The only difference thus between the existent and the non-existent is that, while the former forms the object of the Instrument of Cognition directly, the latter does so only indirectly, -i. e. through something that exists.

#### VIRTIKA-INTRODUCTORY.

"This treatise is being written by me for the purpose of removing the blemish of error cast by inferior logicians" upon that body of doctrine which the chief of sages, †Akşapāda propounded for the peace and welfare of the world'.

'From the true knowledge of the categories, —*i. e.* the Instruments of Right Cognition and the rest, —follows the attainment of the highest food'; —such is the first aphorism of the Treatise (Shāsṭra; body of doctrine) propounded by Gauṭama; and this aphorism serves to point out the ‡connection (and purpose) of the Treatise.

The opening sentence of the Bhāsya is—'An Instrument of Right Cognition must be regarded as rightly effective,  $\mathcal{G}_{c.}$ ,  $\mathcal{G}_{c.}$  § And this sentence serves to reiterate the connection of the Treatise with its purpose (the attainment of the Highest Good); inasmuch as the science does actually set forth what is the Good of Man.

+ Another name for Gauțama. The origin of the name is thus explained : The sage Gauțama used to be so completely absorbed in his logical problems that, having his eyes closed on that account, he one day fell into a well. God, taking pity, there upon bestowed upon his feet the power of vision; ever since he came to be known as 'akaşpāda'--'One who has eyes in his feet.'

<sup>‡</sup> The true knowledge of the categories is the subject to be described; and the Treatise is what describes them; this is the relation or connection of the Treatise with its subject, which is indicated by the first Sūţra. Another thing that is indicated by it is the relation of cause and effect between the treatise and the Highest Good. These are the two 'connections':--(1) that of the *described* and *describer* between the Treatise and Right Knowledge of Categories: and (2) that of *cause and effect* between the Right Knowledge and the Highest Good.

§ The Categories being capable of being known, it could not be argued that the Science has no connection with the Highest Good; because as a matter of fact the Science does describe that Good, along with the means of attaining it. All then that could be doubted is the possibility of our carrying into effect, practically, what is laid down in the Science as such means; and it is this doubt that is set aside by the opening sentence of the Bhāşya, which, by showing this possibility, establishes upon firm basis the desired connection between the Science and the Highest Good.

<sup>•</sup> The 'logicians' here referred to are Dinnaga and others.

The term 'Treatise'  $(sh\bar{a}stra)$  here denotes the duly co-ordinated aggregate of "words descriptive of the Instruments of Right Cognition, and the other categories. The 'word' is an aggregate of letters; an aggregate of words constitutes an 'aphorism'  $(S\bar{u}tra)$ ; an aggregate of aphorisms forms a 'Lecture' (prakarana); an aggregate of lectures is a 'Daily

Lesson' (Ahnika); an aggregate of daily lessons Vār. Page 2. forms a 'Discourse' (Adhyāya); and the aggregate of five discourses forms the 'Treatise' (composed by Gautama). What is set forth by the 'words' of this Treatise is the sixteen categories,-viz., the Instrument of Right Cognition and the rest. What the 'Treatise' ('body of doctrine') ultimately is concerned with is the Highest Good of Man. For the special characteristic of a 'Shāstra' is that it explains the real nature of such things as are not truly cognised by the ordinary means of knowledge, i.e. Perception and Inference; and the subject-matter (visaya) of a Shāstra thus is the real nature of things not known by ordinary means. And the man entitled to study the Shāstra is that disciple who is equipped with the requisite inner qualities (of head and heart).

A 'man' belongs to one of four classes—he either has true knowledge (is *wise* and *learned*); or is destitute of knowledge (altogether *ignorant*); or he is in a state of doubt as to the true nature of things; or he has altogether perverse notions. Among these four the 'learned' man only is in a position to teach; the rest, standing in need of knowledge are men to be taught. In cases where such men depend on the contact of the sense-organs with objects, they learn through Perception; where they depend on the perception and remembrance of certain characteristic features of things, they learn through Inference; and finally, where they require verbal instruction (viz. in the case of matters not to be

<sup>•</sup> This includes the *definition* of the categories, as well as the examination of hose definitions, and such other details connected with the subject-matter.

known through Perception and Inference (e. g. the Highest Good of Man), the Shāstra steps in and imparts knowledge.

The 'Good' of Man (for the attaining of the highest form of which, the means are to be sought for in these scientific treatises) is of two kinds-pleasure and cessation of pain. \*Each of these two kinds again is of two kinds seen and unseen. The cessation of pain is both absolute and non-absolute ('relative' or 'partial'). The partial cessation of pain is that which is brought about by the removal of such temporary causes of pain as a thorn and the like; the absolute cessation of pain, on the other hand, is brought about by the removal of all the twenty-one kinds of pain. These twenty-one kinds of 'pain' are :--(1) the body, (2-7) the six sense-organs, (8-13) the six kinds of cognitions, (20) pleasure and (21) pain. Of these, the Body is regarded as 'pain', because it is the abode of all painful experiences; the Senseorgans, the Objects and Cognitions are so regarded, because they constitute the agency though which painful experiences come; Pleasure is regarded as 'pain', because it is always accompanied by certain sources of paint; and Pain is so re-The 'removal' of all these is garded by its very nature. possible only by abandoning such agencies as those of *dharma* (merit, or righteousness) or adharma (demerit, or unrighteousness); all future merit and demerit are 'abandoned' by not

• The reading here is questionable; the passage as in the text would mean-• Pleasure is the seen good, and cessation of pain is the unseen good';--this, in the first place, would not be true; and in the second place, this would not be in keeping with the explanation give by the *Titparya*. It says--'The seen pleasure is that produced by such visible things as garlands &c.; the unseen pleasure is in the form of heaven and the like; similarly the good in the shape of cessation of pain also is both seen and unseen.

† The sources of pain present in all Pleasure consist-(1) in the fact that man has not full control over the means whereby the pleasure is attained, (2) the transient character of the pleasure, (3) the desire or hankering that one feels toward the pleasure. being produced (by any acts of the agent); and those that have been produced are 'abandoned' by becoming exhausted in consequence of the person having passed through all the pleasurable and painful experiences consequent upon the said merit and demerit.

[The author now proceeds to show in what manner the cessation of pleasure, which has been classed as 'pain,' may constitute the 'good' of man.]

Persons are of two kinds-those that are possessed by attachment, and those that are free from attachment; 'attachment' consisting in the desire for objects; and 'non-attachment' in the absence of all desire for objects. And in accordance with this two-fold division of men.

Var.-Page 3. human activity also is of two kinds: the activity of those who are free from attachment is of only one kind,-being always for the purpose of avoiding the undesirable "; all their activity arising from the motive expressed in the form ' may I avoid the undesirable :' these people have no desire for any object (for the acquiring of which they would have recourse to the other form of activity). The activity of men possessed by attachment, on the other hand, is of two kinds: (1) for the attaining of the desirable, and (2) for the avoiding of the undesirable; the man who desires a certain object acts with the motive of attaining that object; and he ceases from activity towards the acquiring of another object for which he has no desire, to which, in fact, he is averse.

[The Vārțika proceeds to explain the clause 'pravriffisamarthyat,' 'there is a possibility of its giving rise to fruitful exertion.']

The exertion or activity of men possessed by attachment is again two-fold, according as it is *fruitful* (samartha)

<sup>•</sup> For these people, pleasure also is a form of the 'undesirable.' † The word 'Samarfaa' in this connection has been explained by the commentators as equivalent to 'samyagarfa', i. e. artharyabhichari, not diragree-ing with its objective; and it is only the fruitful action that is in due consonance with its objective.

or not fruitful (asamarfha.) The exertion or activity of persons with attachment is thus both fruitful and not fruitful. When urged by the motive of attaining a desired object, the man puts forth exertion or activity, and does obtain that object, his exertion or activity is said to be 'fruitful'; similarly it is called 'fruitful' when acting under the motive of getting rid of an undesirable object, he succeeds in getting rid of it. On the other hand, if, in the former case, he does not attain the desired object, or if, in the latter case, he does not succeed in getting rid of the undesirable object,—his activity is said to be 'not fruitful.'

There is yet another classification of activity under two heads, according as the \* Pramāņa (leading to the activity) is rightly effective (arțhavaț) or not rightly effective. [It might be questioned how Pramāņa can be not rightly effective; but the explanation is as follows:—] The true Pramāņa is rightly effective; because through it objects are apprehended in their true nature;—the false Pramāņa, on the other hand, is termed Pramāņa in a figurative or secondary sense, inasmuch as it resembles the true Pramāņa in a certain general feature (and it is this latter Pramāņa which is not rightly effective).

"But what is that general feature which enables us to class the false Pramāna as a *Pramāna* at all?"

Through both of them, we reply, 'generalities' (general characters; sāmānya) are apprehended. That is to say,

<sup>•</sup> We may note here that the word 'praming' is somewhat promiscuously used. It stands for the 'instrument of Right Cognition' when the right cognition is regarded as the fruit of Pramāņa; but when the exertion of the cogniser is regarded as the fruit, it is the right cognition itself that is spoken of as 'Pramāņa.' The word in the present context is used in this latter sense; because it is the exertion that is spoken of as the fruit; though in the former case, even though the Right Cognition is the desired fruit of the Pramāņa, the resultant activity is the ultimate fruit; but only through the cognition. And in view of this in the present context also the word may stand for the 'Instrument of Right Cognition.' The värjika specially favours the interpretation of 'pramāņa' as Valid Cognition—See Vār. Turi p. 4, 1, 14.

it is well known that generalities are apprehended through the real Pramāņas; and through the unreal Pramāņas also generalities are apprehended<sup>®</sup>.

In view of the above twofoldness of *Pramāņas*,—when the man acts after having apprehended his object by means of the *real Pramāņa*, his activity or exertion is samartha or 'fruitful'; but when he acts after apprehending his object by means of the false *Pramāņa*, his activity is asamartha or 'not fruitful.' And it is by virtue of this (inciting of fruitful activity) that the Pramāņa is called 'rightly effective.'

Against the opening sentence of the  $Bh\bar{a}_{\bar{e}ya}$ —"An Instrument of Right Cognition must be regarded &c."—the following objection is raised :—"As there is mutual interdependence, neither of the two propositions can be established." The answer to this is that the objection has no force, 'on account of there being no beginning.' The sense of the objection is

<sup>•</sup> In the stock example of the apparently valid, but really wrong, cognitionwhen we know the piece of shell as silver-the wrongness of the cognition is proved by the subsequent recognition of the object as shell, this recognition being regarded as valid; but when picked up, the object turns out to be shell and not silver. Now what is the difference between these two-the first invalid cognition of silver, and the second valid cognition of shell? The Parishuddhi remarks that the real form in which the cognition of silver is present in the mind of the observer is-'This, bright white substance, is silver'-in which there are two factors, the general one ' the bright white substance ', and the particular one ' silver.' Similarly the form in which the subsequent valid cognition of shell is present in the mind is-'This bright white substance is shell,'-wherein also there are two factors, the general, one, 'the bright white substance,' and the particular one, 'shell.' Thus then, the general factor is common in both; this is what is meant by the 'apprehension of generalities' that has been declared in the text to constitute the similarity of the valid and invalid cognitions. The above explanation holds good if we take the word 'pramana' as standing for 'instrument of right cognition.' When we take it to stand for 'right cognition,' however, the explanation has to be extended one step further: the 'instrument of right cognition' in both the above cognitions is 'Sense-perception '; and how in both cases the cognition brought about is 'valid' or 'right' is to be explained as above.

further clearly explained\* :-- "In the opening sentence under discussion, is has been declared that it is only when a thing ic known by means of an Instrument of Right Cognition that there is possibility of its giving rise to fruitful exertion; and vet the assurance that a thing has been known by means of an Instrument of Right Cognition can be obtained only on finding that it gives rise to fruitful exertion; such being the case, we ask-which of these two comes first, and which later? If it is the Cognition of the thing by means of an Instrument of Right Cognition that comes first,-how can there be any such definite cognition, until its capability of giving rise to fruitful exertion has been ascertained? If, on the other hand, it is the knowledge of the capability of giving rise to fruitful action that comes first, how can there be any exertion (towards the acquiring or getting rid of an object) unless the thing has been duly Cognised ? Thus we find that it is not possible to ascertain which of the two, the fruitful exertion

• The Tatparya explains the objection thus :--

"The mere cognition of an object cannot be the cause of any fruitful exertion ; it is only the assured definite cognition of the object as being of a kind that accomplishes a desirable purpose, that can give rise to any exertion ; this assurance being based upon an inferential cognition of a number of things of that kind being the cause of the fulfilment of desired purposes ; this therefore is all that can be meant by the first part of the sentence in question ; this definite assured cognition of the object is not possible until the observer has ascertained the validity or rightness of the Instrument whereby that Cognition has been got at. At the same time, the fact that the Instrument of Cognition is valid,—as also the fact that the things of the same kind as the one under question are conducive to the fulfilment of desired purposes,—can be ascertained only by, and after, finding that the exertion to which they lead, is fruitful; and it has already been pointed out that the fruitful exertion itself is not possible without the ascertainment of the aforesaid two facts. This is the *interdependence* that is meant."

The Parishuddhi sums up thus :--"The assured cognition and the inference are not possible without the ascertainment of the validity of the Instrument of Cogniton, or without the recognition of the universal character of the proposition that all things of the kind are conducive to the fulfilment of desired ends; neither of these last is possible without exertion ;- the exertion again is not possible without the assured cognition and inference aforementioned." or the Cognition by means of an Instrument of Right Cognitioncomes before and which after."

The answer to this is that the objection does not hold; because the world has had no beginning, as we shall prove later on, under sūtra 3-1-19. If the world had a beginning, then only would there be any force in the objection embodied in the question which of the two comes first-the cognition of the object by means of the Instrument of Right Cognition, or the possibility of giving rise to fruitful exertion ; as however the world is beginningless, such interdependence necessarily implied in many worldly processes; ia and hence it is not right to take objection to any one process on that ground alone. In reality however all that is meant by the opening sentence of the Bhasya in question is to point out the capabilities of the 'pramana' \* (Instrument of Right Cognition) and the 'pravritti' (exertion), with a view to ascertain their relative effective force in the accomplishing of their desired ends [and not to point out the precedence or sequence of the one to the other]: the sense of the sentence thus is that, ordinarily, when a man has to put forth an exertion, he cognises the object by means of an Instrument of Cognition, and then puts forth the exertion ; and having put forth the exertion he obtains the fruit of that exertion.

<sup>†</sup>A question is here raised [bearing upon the order of treatment adopted by Gautama]:—" Does the capability (to accomplish the Highest Good) belong to the cognition of objects by means of the Instruments of Right Cognition? or to the exer-

• The Tat. reads 'prāmāņya' for prāmāņa; this reading however is not satisfactory.

<sup>+</sup> What this question drives at is that the attainment of the Highest Good being the declared aim, the proper order should have been to explain the details or *exertion* and not (as Gauşama has done) those of the Instruments of Right Cognition ; be' cause as a matter of fact the Highest Good is attained, not by the mere definite Cognition of things by means of the Instruments of Right Cognition,—but by such exertions and activities as (1) the *contemplating* of all objects as being the source of pain, and (2) the *meditating* upon the true essence of the soul. tion?" • The answer to this is that both are capable, inasmuch as both are equally necessary conditions (of the accomplishment of desired ends). And what the opening sentence of *Bhāşya* does is to point out this fact (of both being capable) and also to indicate what the result is (with relation to which they are capable).

Or, lastly, the opening sentence may be taken as explaining what happens in ordinary practice: the sense being-[Inasmuch as Instruments of Right Cognition must be regarded as rightly effective, because it is only when a thing is known by means of an Instrument of Right Cognition that there is a possibility of its giving rise to fruitful exertion] what happens in ordinary practice is that every cognitive agent obtains the desired result, when he puts forth his exertion on having cognised the object by means of the Instruments of Cognition.

[The Vārtika proceeds to supply another interpretation of the opening sentence of the Bhāşya.] The four kinds of things denoted by the word 'Artha' or 'object' are— $\dagger$  (1) that which has to be got rid of or avoided, (2) the direct cause of the avoiding of (1), (3) that which accomplishes (2), and (4) the ultimate end sought to be attained. To the first category belongs pain described (above), as also the sources of pain,—vis. ignorance and desire, and merit and demerit; to the second category belongs the knowledge of truth, by which is meant the knowledge of things as they really exist;

• The sense of the reply is that, it is true that it is exertion that is the direct and immediate cause of the accomplishment of the desired result; but it is also equally true that the exertion is effective only when it follows upon the right cognition of things brought about by the Instruments of Cognition. The natural order thus is first the right Cognition, second the Exertion, and third the attainment of the desired end. It is a well known fact that an exertion proceeding from a cognition, that is not obtained by means of the Instruments of Right Cognition, never accomplishes the result. Hence the order adopted by Gauțama is the right one.

+ As pointed out in the Bhasys, pp. 2-3.

Downloaded from https://www.holybooks.com

it is this that is spoken of as 'pramāņa'; to the third category belongs the Shāstra or Treatise; this also has already been described above;—to the fourth category belongs Deliveranco, which consists in the absolute cessation of pain. Among these four, the most important is the Pramāņa; and it is this all-importance of Parmāņa \* [not only among the four enumerated above; but also among another set of four: (1) the Pramāņa or Instrument of Right Cognition, (2) the Pramā or Right Cognition, (3) the Pramāya or the object of Right Cognition, and (4) the Pramāțri or the cogniser] that is meant to be emphasised by the opening sentence of the Bhāgya.

A question is raised—" In what way can the sentence of the  $Bh\bar{a}sya$  be made to indicate (the importance of **Pra** $m\bar{a}na$  among) this latter set of four,  $Pram\bar{a}na$ ,  $Pram\bar{a}$ , Pra $m\bar{e}ya$  and  $Pram\bar{a}tri$ ?" † The answer to this is that, as for the first three of these four—viz: the Instrument of **B**ight Cognition, the **B**ight Cognition and the Object Cognised,—are mentioned directly by the words of the **B**h $\bar{a}sya$  itself; then as for the Cogniser, this is indicated, inasmuch it is a factor inseparably connected with those three; for certainly, without

† The Parishuddhi (Ms. pp. 75-76) thus explains how they are mentioned by the words of the Bhāşya. The Bhāşya in the opening sentence mentions the word 'arfha', which, as declared in the Bhāşya itself (pp. 2-3), includes the four (1) hāna, (2) hyša, (3) up 3ya and (4) apavarga Of these the 'hāna' includes the pramāņa, as already pointed out in the Vārfika; because until we know a thing to be pramāņa, we cannot recognise it as ' āna'. Similarly the pramāya is included in the 'hāya'; as until the object is cognised, it cannot be recognised as 'hāya'; among the 'pramāyas' (which are identical with the 'hāya') the Sūţras mention 'buddhi' or 'Cognition' also; and thus Cognition also becomes included in the 'hāya' of the Bhāşya.

<sup>•</sup> The particle 'cha' in the Vārţika indicates that the Bhāṣya points out the importance of Pramāṇa, not only among the four factors described above, but also among another set of four factors: (1) Pramāṇa (Instrument of Cognition), (2) Pramā (Right Cognition), (3) Pramīya (Object of Cognition) and (4) Pramāțri (the Cognizer). The all-importance of Pramāṇa among the former set is due to the fact that it is the direct cause of the attainment of the Highest Good; and that among the latter set is due to the fact that the three last depend for their very existence upon Pramāṇa.

the Cognisser, there can be no Cognition (or Instrument, or Object, of Cognition).

We now are going to explain each part severally, of the opening sentence of the Bhāşya :---

'Pramānatah'-the Bhāsya uses this form as including all the numbers-singular, dual and plural, -as well as two declensional significations, of the Ablative, as denoting causality, and of the Instrumental, as denoting instrumentality [while 'pramānāt' would have included only the singular, and that too of the Ablative only.] "But, how can it be possible to use the affix 'tasi' in any sense other than the pure Ablative [its use being restricted to this latter by Pānini 5. 3. 7]?" It is possible, we reply, to use it in the sense of other declansional terminations also; inasmuch as the affix has been regarded as applicable too all declensional significations, from the nominative downwards [as pointed out by Pāņini "What is the purpose that is secured by the 5. 8. 14] use of this particular affix ?" In the first place, the inclusion of all numbers serves to make the word comprehensive, and at the same time restrictive-'comprehensive' as it implies the sense of all the three words 'pramanena' 'pramanabhyam' and 'pramānaih' (i. e. the instrumentality of one, two, as well as three, pramānas); and 'restrictive' as it implies the instrumentality of the pramāna only, (and not that of any thing else). In the second place, the inclusion of the two declensional significations (of the Instrumental and the Ablative) serves the purpose of denoting the cause as well as the instrument; the 'pramāna' being regarded as the cause beit is from the Pramana. that the cognition of **Caus**e objects proceeds; and it is regarded as the instrument because the \*cogintion of objects is accomplished by means of

<sup>•</sup> The Tatparya explains 'artham' as equivalent to 'arthadh gatim'.

pramāņas; which points to the fact of pramāņas being the Instrument, or most effective means, of accomplishing Cognitions. An objection is raised :--\* "Inasmuch as the objects of different pramanas are distinct from one another. it is not right, or possible, for a number of pramanas to be speken of comprehensively or collectively (as is sought to be done by the use of the affix 'tasi')." The answer to this is that this is not admitted. The objection is further explained :--- "As a matter of fact, each pramana has an object entirely distinct in character from those of other pramunas; Sense-perception has for its object specific individualities; while Inference apprehends generalities; and certainly a distinction has to be drawn between specific individuality and generality; and Sense-perception is never found to apprehend generalities ; nor is Inference ever found to apprehend specific individualities [And there is no other pramāna besides these two, Sense-perception and Inference.]" The answer to the above objection is that none of the propositions advanced by the objector is admissible; that is to say, we do not admit that there are only two pramanas; nor that there are only two kinds of objects apprehended by them; nor that there is no commixture of praminas (with reference to the same object of Cognition). Our reasons are as follows :-- In the first place, the number of pramanas is four; secondly, the objects apprehended by the pramanas are of three kinds-generality, particuliarity + (i. e. individuality,

<sup>o</sup> This objection emanates from the Bauddha who accepts only two Pramanas, Sense-perception and Inference; and according to whom what is approhended by Sense-perception is only the scalakeana or specific individuality of the object; and another factor that enters into our conception of objects, according to him, is that an object is in essence only the negation of other things; this is the most generic conception that we can have of things; this is what is regarded by the Bauddha as the generality or 'sam laya', and it is this that forms the Object of Inference.

† The word vishing as used here is in the sense of the ultimate individuality, as well as the intermediate particularising qualities; and not in that of the 'specific individuality' only. final as well as intermediate) and that which is possessed of the peculiarity; thirdly, there is a commixture of *prāmaņas* also, one and the same object being cognised by means of more than one *pramāņa*; as we find in the case of the sense-organ for instance: the sense-organs, being Instruments whereby things are manifested (rendered cognisable), are *pramāņas*; and among these we find that while each of them has its own specific object, there are many objects that are common to a number of them; for instance, *odour* is the specific object of the olfactory organ; whereas the *earth* is an object that is common to two sense-organs [being perceived by means of the eye as well as by the nose], while the cognition of 'being', as also the generic conception of 'quality', is derived through the agency of all the sense-organs.

[Against this 'commixture' of pramanas an objection is raised]--" If the object has been already cognised by the agency of one pramāņa, the other pramāņa, would be absolutely useless." It is not so, we reply; because the cognition obtained by the agency of one pramana is of a character entirely different from that obtained by the agency of another. The objector explains his position further :-- " If there be a sommixture of pramanas, then, inasmuch as the object would have been already cognised by the agency of one pramana, the agency of any other. pramana would be absolutely useless (in regard to the cognition of that same object); as if the latter pramāņa were to bring about the cognition of that same object which had been already cognised by the agency of the former pramāna, then its operation would be as useless and superfluous as the pounding of the grain that has already been pounded." The answer to this is that what we mean by the 'commixture' of pramanas is not that the object cognised by means of Inference and the rest is of the same kind (and is cognised in the same manner) as that cognised by means of Sense-perception ; because as a matter of fact,

we find that \* when an object is cognised by means of Senseperception, it is in contact with the sense-organs (and the cognition is obtained by means of this sense-contact); but when the same object is cognised by means of Inference, it is not in contact with the sense-organ (and the cognition is obtained by means other than sense-contact) ;---so also when that same object is cognised only as bearing a certain name (or as denoted by a certain word) | this cognition is got at through similarity, and not either through sense-contact, or through the circumstances attendant upon Inference]; ---and lastly, +when that same object is cognised by means of trustworthy assertion, is is through the agency of words [and not through any of the aforesaid agencies]. [Nor can the different pramänas be regarded as superfluous simply because there are cases of commixture of them; because] when pertaining to different objects, there is a distinct line of demarcation between the pramānas; and it is not that in all cases there is commixture of the pramānas.

Thus then, it is established that the affix 'fasi' (in the word 'pramāņaļaḥ') serves the purposes of including all numbers and a both (Ablative and Instrumental) declensional significations.

Astatic Soci ty Calcutta

<sup>•</sup> The translation of this passage is in accordance with the explanation of the Tätparya and the Parishuddhi, which take it as referring to the case of the commixture of different Pramāņas, as bearing upon one and the same object. This interpretation is supported by what follows in the Vārţika itself, on p. 6, line 1. The sense is that even when the same object is cognised by different pramāņas, it is cognised by each of these in a distinct aspect. For instance, when we perceive the jar by the eye as well as by the nose, what the eye perceives is the colour, while the nose apprehends the smell ; under the circumstances, if, as the objector would have it, the eye were to cease to function because the jär had been already perceived by the nose,—then the colour of the jar would never be cognised. The manner of cognition too is different in the case of different pramāņas. Thus it is found that in cases of commixture of pramāņas there are distinct differences in the matter and manner of the cognitions ; and there is no 'pounding of what has been already pounded.'

<sup>+</sup> The reading here in the printed text is defective.

[The sense of the affix *fasi* in the word *'pramāņaļaḥ'* having been explained] it becomes necessary now to ascertain the real character of what is expressed by the word *'pramāņa'*. The first question that naturally arises is—what is it that constitutes the character of the *pramāņa*? And what is it that is meant by the word *'pramāņa*?'

The answer is that pramāņa is the cause of cognition \*; and consequently the character of pramāņa consists in its being the cause of cognition. An objection is raised against this definition—"The definition proposed cannot be the right one; because it is applicable in common to other things also: that is to say, if pramāņā be defined only as the cause of cognition then,—inasmuch as the pramāțri (Cogniser) and 'pramēya (Cognised Object) are causes of cognition,—these also would have to be regarded as endowed with the character of pramāņa. If whis is not intended, then, some difference (between pramāņa on the one hand, and the Cogniser and the Cognised on the other, should be pointed out)." † The answer to this is that the difference lies in this that the Cogniser and the Cognised have

<sup>•</sup> The Tatparya notes that this definition would be too wide,—all doubts and misconceptions also being 'cognitions';—if the whole enquiry had not been prefaced by the qualification 'artharat'—'in conconance with the real nature of the object, i.e. 'calid.'

<sup>+</sup> The first distinction in thus explained in the Tat:—'The operation of all agents lies in the operating of the instrument, and never directly in the bringing about of the ultimate result. The instrument is of two kinds—(1) that which already exists, e. g. the sense-organ, and (2) that which has to be brought into existence, f. i, the contact of the object with the organ; and in the case of cognition all that the Cogniser does is to set into activity these two kinds of instruments; these instruments on the other hand, have no other function save the direct bringing about of the Cognition. As regards the Object Cognised, it does not appear as cause in any other kind of Cognition save those in the form of Sense-perception; in all other Cognitions it appears only as the object upon which the instrument operates; in the case of Sense-perception also, all that the object does is to accomplian the sensecontact necessary for the Cognition; and it does not operate directly in the bringing about of the cognition which is brought about directly by the sense-organ, of course as aided by the aforesaid contact.

their function fulfilled elsewhere; that is to say, the function of the Cognising Person and the Cognised Object lies in, and is duly fulfilled by, the inciting of the pramana (the cognitive instrument) into activity; this instrument, on the other hand, does not have its function fulfilled (except by the bringing about of the Cognition); for this reason it is the pramāņa (and not the pramātri or the pramēya) that is regarded as the real cause (or instrument) of the Cognition. A further objection is raised—" In that case the pramana itself would be without an instrument; that is to say, if the pramāna (the instrument) is itself brought into existence by the Cognising Person and the Cognised Object, then the coming into existence of the pramana would be without an instrument [which is absurd, as without the intervening agency of the Instrument, no Agent can operate upon anything, even the pramāna.]" It is not so, we reply; because the contact of the object with the sense-organ would be the requisite instrument \*; that is to say, the coming into existence of the pramāna is not without an Instrument; inasmuch as it is by the instrumentality of the contact of the object with the

Thus it is proved that neither the Cognising person nor the Cognised object are the *direct cause* of Cognitions; it is the Cognitive instrument (pramāņa) alone that is the *direct cause*.

The second distinction between Pransāņs on the one hand and the Pramāț; and Pramēya on the other is explained in the Text, on p. 7. line 10.

• It is in this connection that the *Tat* brings out clearly the confusion attaching to the use of the word *pramana*:—If the cognition is regarded as the pramana, then the sense-contact of the object is the *instrument* by which it is brought about; and in this case the acceptance or rejection of the cognised object is the *fruit*. When however it is the senseorgan that is regarded as the '*pramana*', then the cognition itself is the *fruit*.

It may be noted here that the point of the objection was not against the case when the cognition is regarded as 'pramāņa', as in that case there could be no question of its having the contact for its instrument. The objection raised is with regard to all cases of 'pramāņa; and the answer given does nor refer to that case when the sense-organ is regarded as the 'pramāṇa'. The answer in reference to this,—as also with regard to all cases of pramāṇa—would be that the pramāṇa is not brought into existence by the pramāți and the pramāņa; these latter only serve to set it into activity towards the bringing about of the cognition.

sense-organ that the pramana is brought into existence by the Cognising Person and the Cognised Object. The opponent raises a further objection :- "If, in the bringing about of the pramana, the Cognising Person and the Cognised Object depend upon the contact of the sense-organ with the object, what do they depend upon in the bringing about of this contact [which also is regarded as a pramana, an instrument of Cognition]?" Well, in this, they depend upon the Senseorgan; so on, the series of agents and instruments goes on ad infinitum; that is to say, what comes afterw rds depends upon that which has gone before it, and so on the dependence of the agent upon the instrument may be traced back without beginning or end. A further objection is raised :-- "It has been declared that the pramana is brought into existence by the pramatri (the cognising person) and the prameya (the object cognised), which two latter therefore must exist before the pramana is brought into existence; well, as a matter of fact we know that until the pramana is there, no person can be recognised as the 'Cogniser', nor can any object be known as the 'Cognised'; and thus it is not possible for either the Cogniser or the Cognised to have any existence prior to the appearance of the pramana. Because the word 'pramana' is one that, by its formation, denotes some sort of practical relation to an action; and so also are the words 'pramā/ri' and 'pramēya'; and it is a well-recognised fact that no such words are possible without some Vär Page 7. sort of action (the relation with which, of the thing denoted by the noun, would be implied by the word); \* because it is not possible for any substance per se (without some action) to be a kāraka (i. e. a word bearing a practical relation to an action); nor is it possible for any mere action per

<sup>•</sup> For example, Dövadatta does not come to be regarded as an active efficient agent—a wood-cutter for instance—until he acually cuts the wood. Nor are his mere auxillary acts of raising and letting fall the axe regarded as that afficient agent.

se to be a kāraka; \* in fact, all words denoting practical relation to actions are used with reference to (and as expressing) that which is operative towards the accomplishing of the principal action concerned, by being the substratum of those auxillary actions that lead to that final action; and inasmuch as the two words 'pramā tri' and 'pramēya' are both words denoting practical relation to an action (viz: the action of Cognising), they could never be used without reference to that action." † The answer to the above objection is as follows: ‡ As a matter of fact, all kāraka words (words expressive of practical relation to actions), like 'Cooker' ('pāchaka') and the rest, pertain to the past, present and the future; that is to say, we do not admit that kāraka words are used only when actually related to the action at the time; what we hold is that they are used in regard to all three points of time (i. e., as related to the action in the past, or at the same in the *future*); if they depended time. for their or

• For example, in the case of the cutting of the piece of wood being the principal action, (1), the agent, the wood-cutter, who is the first kūraka, is the substratum of such auxilliary actions as the raising and letting fall of the axe; (2) the objective, the wood that is cut, which is the second kāraka, is the substratum of the auxilliary actions of coming into contact with the falling axe; (3) the instrument, the axe which is the third kāraka, is the substratum of the auxilliary actions of falling; and so on, every form of kāraka, or practical relative to actions, is dependent upon some sort of action.

+ That is, without the pramana there can be no prama or cognition; and without the prama, there can be no cogniser or cognised.

\$ Says the Tat-'All agents-kārskas-are endowed with a two-fold potency tending to the bringing about of their respective effects : one potency consists in the very form or nature of the agent itself, and the other in the presence of auxillary forces. In the case of the **urum**, he is the agent of cooking by his own nature, ag also through the auxilliary in the shape of his actually doing the act of cooking; hence it follows that all kāraka words are capable of being used, even in the absence of the second potency, which would consist in their actual doing of the action,-the use in this case being dependent upon the primitive or primary potency of the words which is existent at all times; while the secondary potency exists at the time of the action ouly. Thus then, even though the pramdiri and pramiya may not actually have brought about the promdan, the words pramdiri and pramiyas would be capable of being used in that sense, on the basis of their primitive potency. use upon their relation to present action only, then they could never be used in the absence of such action; as a matter of fact, however, we find the words so used [as when we speak of 'the cooker having cooked two days ago', or of 'the cooker going to cook two days hence', in both which cases the action of cooking is not present at the time that the kāraka word 'Cooker' is used]; and the reason for such usage lies in the (expressive) potency of the word itself; and this potency is present at all times (and not only at the time that the related action is actually present); in the same manner there need be no incongruity in the assertion that 'the pramāna is brought into existence by the pramāțri and the pramāya.'

• There is yet another distinction between pramāna on the one hand and pramāțri and pramēya on the other, whereby there is no possibility of any admixture among them (as to their instrumentality towards cognition) :--+ This distinction lies in the fact that the pramāņa is the most efficient and direct cause of cognition [while the pramāțri and the pramēya are only indirect causes, bringing about the cognition, as they do, only through the pramāṇa.] That is to say, there is no possibility of any such contingency as that urged above, --viz., that 'the pramāțri and the pramēya, being causes of cognition, may be regarded as pramāṇa'; because it is the pramāṇa, and not the pramāțri, or the pramēya, that is the most efficient and direct cause (of cognition).

"What is the meaning of the most efficient cause? When it is asserted that the pramāņa is the most efficient cause, it is a more verbal jugglery; and it does not express any meaning at all."

<sup>•</sup> This is another answer to the objection urged in the Test, p. 6, ll. 5-7.

<sup>†</sup> The Pramāţri and Praudya bring about the Pramāņa, which brings about the cognition. Thus it is the pramāņa that is the direct cause of cognition; while the former two are only indirect causes.

• In answer to this question, we proceed to explain what is meant by pramana being the most efficient cause :---(1) The most efficient cause is that whose presence and absence regulate the presence and absence of the effect; thus for instance, as regards the pramatri and the pramaya, it is true that when these are absent, the prama (cognition) does not appear (is absent); and it is also true that it is only when the former two are present that the cognition appears; but this does not mean that when they are present, the cognition must (always) appear; while as regards the pramāna, when this is present (and operative) the cognition must appear †; this peculiarity in the pramana is what makes it the most efficient cause (of cognition). (2) Or, the peculiarity in the pramana which makes it the most efficient cause may be regarded as consisting in the fact that it is only when equipped with the pramana that one can have any cognition ; 1 that is to say, it is cnly when the pramang is there, and never when it is not there. that one has any cognition. (3) Or, the peculiarity in the pramina whereby it is recognized as the most efficient cause may consist in the fact that, even though the two factorspramāļri and pramēya—are present, they do not have any causal efficiency towards the bringing about of the cognition, until the pramana appears. (4) Or, the peculiarity may

<sup>•</sup> There are seven different explanations of what constitutes the 'most efficient cause.'

<sup>†</sup> The operation of the Pramāţri and Pramēya is taken up by the setting into activity of the Pramāţa, which thereupon brings about the cognition. Thus being one step removed, there is always the likelihood of obstacles intervening between the Pramāţri-Pramēya and the cognition; there being no isterruption between the functioning of the Pramāţa and the appearance of the cognition, there is no chance of any obstacles coming in.

? This explanation has to be added as the cognising observer hat to be equipped with some object also. But it is not that when the object is present then alone can there be any cognition; as in the case of many inferential cognitions the object is not present at all. On the other hand, there are no cognitions at all when the pramage is absent. consist in the fact that like the final contact, it is the pramāņa that is the last to appear (and operate); that is to say, in the case of a substance which is brought about by a number of contacts of the component particles, it is the last of these contacts that is regarded as the most efficient cause in the production of that substance ;—in the same manner, in the case of cognition,—which is brought about by a number of agencies in the shape of the pramāța that comes last; and on that account it is the pramāņa, and not the pramāța in the bringing about of that cognition. (5) Or, the peculiarity of the pramāņa may lie in the fact that (of all agencies) it is that of the pramāņa which is followed immediately by the cognution; the peculiarity in this case consisting of this immediate

sequence. (6) Or, the peculiarity may lie in the fact Vär P. 8. that it is the pramana that forms the specific cause of each individual cognition; the pramāțri is a cause that is common to all kinds of cognitions (perceptional, inferential, analogical and verbal, that the man may have); the prameya also is common to the cognitions of all men (the same object being cognised by all); thus neither of these two is found to be the specific cause of any individual cognition ; the pramana, on the other hand, pertains to each individual cognition that is brought about; thus it is the pramana that is regarded as the principal cause of each cognition; and it is on account of this predominance that the pramāna comes to be called the most efficient cause. (7) Or, the peculiarity may consist in the fact that it is the pramana that specifies or individualises the contact leading to the cognition; that is to say, the contact (of mind and soul) which leads to cognition (and as such is common to all cognitions, like the pramatri and the prameya) becomes specified, or individualised or restricted, to any one particular cognition, only through the pramana; and for this reason the pramana comes to be called the 'most efficicni cause<sup>\*</sup>.'

[Of the opening sentence of the Bhāsya, the first word, 'pramānatah', has been explained; the Vārtika proceeds to explain the next word 'artha']-The word 'artha', 'thing', is mentioned, --+ firstly for the purpose of precluding the cognition (pratipatti) which has the pramana for its object; as a matter of fact, what urges the man to have recourse to an exertion towards the fulfilment of a desired end, is. not the cognition of the pramana, but the cognition of the thing (artha) as such 1 (i. e. as desirable); that is to say, it is only when the man cognises the thing as something desirable that he betakes himself to activity (tending either to the attaining or to the discarding of the thing cognised); -secondly, the mention of the word 'artha' serves the purpose of excluding the cognition of such objects as deserve only to be disregarded; as a matter of fact, the cognition of an object which deserves to be disregarded (and which does not inspire the man with the desire either for obtaining or discarding it) does not urge the man to any exertion or activity; what does urge him to activity is the cognition of the thing as the source of either pleasure or pain; it is only when the man cognises the thing to be the source of pleasure

*†* When a man knows a thing as something desirable, he takes to the activity tending to the acquiring of that thing; the mere cognition of pramāya does not lead to any activity; and as the author of the Bhāşya had to speak of what leads to activity, he had to add the word 'artha'; without this word, the word pratipatitax only could have included the cognition of things as well as of pramāyas, or of any and every matter that may be cognised.

‡ ' Taih lbhāva '--arihajva--arihanīyajva ; the word 'ariha' being literally that which is desired, arihyajö ifi ; this desirability applies to pleasure as well as pain --the former being desirable for acquiring, and the latter for discarding.

<sup>•</sup> Says the *Tai* --- 'The pramäna is said in the text to be afishyashabdarāchya; though what is meant is that it is the afishayin; the use of the word in the text is explicable only on the ground that the two -- afishaya and afishayin -- are held to be identical.

or pain that he betakes himself to activity (tending to the obtaining of that which is cognised as the source of pleasure, and to the discarding of that which is cognised as the source of pain).

An objection is raised :---"There is no necessity of the word 'pramana, inasmention for the much as what is intended to be expressed by this word [viz : the cause of fruitful activity or exertion] would (as shown in the above paragraph) be implied by the word The answer to this is that the word " artha ' itself." · pramāņa ' serves the purpose of indicating the distinctive feature of pramānas. What the objection means is that,if the Bhāsya passage had stood simply as-it is only the cognition of an artha that is capable of giving rise to fruitful exertion,-this alone would have implied the agency of pramamas, inasmuch as there can be no cognition without pramana. But this is not right; because even so, the addition of the word 'pramānatah' is not wholly useless ; as, in the first place, it serves to indicate the distinctive feature of pramanas : that is, in ordinary usage, we find the word ' pramans ' used promiscuously, being sometimes applied to real pramanae, and often also to such instruments of cognition as are not real pramāņas (instruments of Right Cognition), but which are yet called 'pramana' on account of their similarity to real pramānas (in that both are instruments of cognition); [and the mention of the word ' pramāna ' serves to indicate this distinctive feature of the real pramana, as compared to what is only spoken of as such, the sense being that] • the cognition of things that is brought about by the real

• It is true that the mere pramāņa in general would be implied in the word 'arfåa'; but that would not be enough ; what is really capable of giving rise to fruitful exertion is not mere pramāņa in general, but only such pramāņs as is the eause of the cognition of things ; and it is only when the thing is cognized by the real gramāņa that it gives rise to fruitful exertion, and not when it is cognized by the unreal pramāņa. The printed text reads 'fafhāha'; this does not give any satisfactory meaning ; the Jafparya reads 'fadyāha' which is adopted in the translation. pramāņa proves this real pramāņa,—and not anything else—to be capable of giving rise to fruitful exertion. Another useful purpose served by the addition of the word 'pramāņa' is that, if this word were not used, it would not be possible to use the Ablative affix 'fasi'; and the ablative affix serves useful purposes (as already shown above, Text, p. 14, ll. 20, &c.)

[The Vartika proceeds to criticise the interpretation offered by other Naiyāyikas].—Some Naiyāyika-Ēkadēshīs offer the following explanation of the word 'artha' (as occurring in the Bhāşya) : -- " The word 'artha' denoting sources of pleasure and pain, the addition of this word serves the purpose of including all things that are desired (arthyamāna); all things, including the pramanas and all the rest. are sources of pleasure or pain; and as such, all these are desired; and as desired, they all fall under the word 'artha'." This explanation is not right ; as this would involve---(1) a contradiction, (2) the undesirable contingency of expressing what is not intended and other incongruities ; because, in the first place, one who asserts that all things, pramana and the rest, are sources of pleasure or poin (and as such denoted by the word 'artha') would contradict the statement in the Bhāşya (Text page 2. 1. 7 and p. 3 line 1) to the effect that-' what are denoted by the word artha are the four things— $h\bar{e}ya$  (pain and also pleasure as tainted with it), hana (true knowledge as putting an end to pain), upaya (the scientific treatises as bringing about true knowledge) and adhigantarya (Release, as the final end to be attained).'\*--Then again, the discarding

<sup>•</sup> Another 'contradiction' involved is thus explained in the Tat-If all thingsincluding pramanas, the shistfra and even Release-were sources of pleasure and pain (pleasure also being classed under pain, as shown in the Bha p. 2, 1. 16), they would all be sources of pain; and as such they would all come under high, things to be discarded i. s. Even the shastfra and the pramanas whereby all knowledge is attained, would all come to be classed under that same category; and while contradicting the Bharya and the Sufra, this would involve a palpable absurdity.

of pramana and the rest, is not possible \*---and (even if possible) the discarding of such things as pramana (Release) and the rest is not what is intended to be said (by the authors of the Sūtra or the Bhāsya) whose declared purpose law in the explanation of the means to Release). For these reasons, the above interpretation must be rejected as incorrect. What are really denoted by the word 'artha' are only all those things which are either themselves pleasure and pain, or are the cause of these; that this is so is also proved by the fact that it is only these things whose cognition can give rise to the 'fruitful exertion' that forms the topic of the context (as declared by the opening sentence of the  $Bh\bar{a}sya$ ; [that the word 'artha' cannot mean all things is also proved by the fact that, if it did so, it would include the cognition also;] as a matter of fact however, the cognition could not be so included; (1) because (it does not constitute either pleasure or pain or the cause of these, and as such] it does not form the topic of the context; -(2) + because the cognition by itself

• This second objection against the interpretation is indicated by the particle 'cha' (in the Text., p. 9, l. 1) which we have rendered above by the phrase 'and other incongruities.' The sense is that pramāņa, being a source of pain, would be included under 'hāya'; but the only means of discarding the 'hāya' consists in the shāstra of which the pramāņas constitute the integral part ; so if the pramāņas have to be discarded, they would be avoided by means of themselves, which is an absurdity.

† If evey cognition were the object of a further cognition, then the series of every single cognition would go on *ad infinitum*; and so the whole lifetime of a person would not be enough for one cognition even. It is for this reason that some point in the series, some one cognition, should have to be regarded as not being the objective of a further cognition. And thus by its very nature cognition cannot be regarded as always forming the objective of actions; consequently it could not be regarded as 'heya'-object to be discarded-which forms one of the factors denoted by 'artha'; nor can it be an object to be acquired; because it is an end in itself

This is the interpretation is accordance with the *Tātparya*; and this is the only possible interpretation of the reading as it stands. But the last sentence is not very clear—because cognition is an *end in itself*, that is all the more reason why it should be sought after. If we read '*aphalatodt*', the meaning becomes clearer : that which cannot form the objective, can never form a phala; and that which is not a phala can never be sought after, arthyamāna.'

is not capable of forming the objective of actions: it cannot be ' $h \exists ya$ ' (object of the action of *discarding*) as it is neither pleasure nor pain, nor the cause of these; nor can it, be an object to be sought after, because it forms an end in itself.

Says the Bhasya (p. 1, line 6)-'So'-yam pramanartho-'parisankhyeyah'; --- some commentators have explained this to mean that 'it is not possible to enumerate the precise number of the objects on which the pramanas operate, because the number of such objects is infinite.' This interpretation is not correct; because the Bhasya has actually enumerated both \* kinds of 'arthas' (in the preceding sentence): it has been actually mentioned in the Bhasya that the pramanartha (the object of the pramanas) consists of the following four:-pleasure, pain, the cause of pleasure and the cause of pain; -and inasmuch as here we find both kinds of 'ariha' actually enumerated, it is not right to interpret the passage in question (which follows immediately after the enumeration) to mean that such enumeration is not possible :---another reason why we cannot accept this interpretation is that, in support of the assertion 'pramanartho' parisankhyeyah,' the Bhasya puts forward the reason 'pranabhridbhedasyāparisankhyēyatoāt' (because the number of living creatures is infinite'); and if the above interpretation were correct. the sense of the Bhasya would come to be this-' the objects of pramanas cannot be enumerated, because the number of living creatures is infinite,'-an entirely incoherent assertion ! There is however, no real incoherency in the Bhāşya :---what the word 'artha' means is 'purpose' or 'motive', prayojana; and not 'object'. viewya; the sense of the Bhaeya thus being that the purposes scrued by a pramana cannot be enumerated. "How do you know that this is the real meaning of the Bhāsya ?" [For the simple reason that the reason given in support of this

<sup>\* &#</sup>x27;Both'-the two kinds consisting of (1) Pleasure and Pain, and (2) the cause of pleasure and pain,

assertion fits in with this meaning: the sense being that "the number of living creatures being infinite'] the same thing may be the cause of pleasure to some and the cause of pain to others [hence it cannot be definitely enumerated or stated that the pramāņa pertaining to any one object serves the purpose of causing pleasure only, or that pertaining to another object serves that of causing pain only.]

[Bhā. p. 1, line 7.] It is only when the Instrument of Bight Orgnition duly operates \* with regard to an object, that due success belongs to the Cogniser. [In support of this assertion the Bhaeya puts forward the reason 'anyatamāpāyē'-rthasyānupapattēh,' and in this clause] the word 'anyatama' must be taken to mean the most efficient cause; because this is the meaning that fits in with the context: what is sought to be asserted in the context is that among the four-Pramana, Pramatri, Pramēva and Pramā,-it is the Pramāņa that forms the most predominant factor; such being the case, if we took the clause in question to mean what the words signify in ordinary parlance [i. e. if the sentence were to mean that 'the object would not be accomplished if any one of the four were absent," taking the word 'anyatama,' in its ordinary sense of 'any one of the number'], in what way would that prove the predominance of the Pramana? [As in that sense, the clause would prove every one of the four to be equally important]. For this reason, we must take the word 'anyatama' in the sense pointed out above (that of the most efficient cause) [the clause thus meaning-'because there is no possibility of the object being accomplished so long as the most efficient cause is not present.']

<sup>•</sup>The word 'arthaust' is explained as-(1) 'samyagartha' 'right', 'in due accordance with the real nature of the thing organised', and (3) also as 'skakta', 'capable', 'operative'; hence it has been considered proper to translate the word as duly operates, which combines both ideas.

[Among the four, the Pramatri is the first to be mentioned and described in the Bhasya; so the Vartika proceeds to define the Pramotri.]-The Pramotri or Cogniser is one who is self-sufficient or independent. "In what does this independence consist ?" (I) The 'independence' of the Pramatri consists in the fact of his being the enjoyer or experiencer of the results brought about by the active agencies pertaining to the action (of cognition): as a matter of fact, it is the Cogniser who becomes related to the results brought about by the active agencies tending to the action of cognition. \* (II) Or, the 'independence' of the Cogniser may be regarded as consisting in the fact that it is he in whom inheres the action (proceeding from the active agencies): as a matter of fact, it is the Agent who becomes the receptacle or substratum of that action which is brought about by all the active agencies (operating towards that action). + (III) Or, the 'independence' of the Cogniser may consist in the fact that it is the Agent who sets into activity (or operates) the active agencies;or' in that it is he who is urged to activity by the active agencies; that is to say, it is the Agent who operates the active agencies whose potency (with regard to the action contemplated by the agent) has been duly ascertained .-and who himself is urged to activity by such agencies.

[The Bhā., p. 1, line, 11, says--- 'chafasrişu chaivamvidhāsu arthatattvamp arisamāpyatē.'--- 'It is on all these four that the real nature of things is dependent;'--- in this passage]

**†** That is to say, the Agent is that person whose direct action is denoted by the verb.

<sup>•</sup> The Agent has been defined as one who experiences the results of the action of which he is the agent. As a matter of fact however, all agents do not always enjoy the result of their actions; for instance, the cook, who is the Agent in the action of cooking, does not experience the results of cooking; as the food cooked is eaten, not by him, but by his master. In view of this defect in the definition the author puts forward another definition.

what is meant by '*fattvaparisamāpti*,' dependence of the real nature, is that it is through the four factors described (*Pramātri* &c.) that things become capable of either being used or disregarded. That is to say, the 'dependence' Var Page 10. must consist in the fact that it is only when a certain thing has been duly cognised (by means of the fcur factors enumerated) as being the source of either pleasure or pain, that it becomes capable of being used—*i.e.*, either acquired or discarded;—or, when it is cognised as being the source of neither pleasure nor pain, that it becomes capable of

being disregarded (treated with indifference).\*

[The Bha, has used the word, tattva, real nature, or thatness.] On this the question is put-"what is that 'tat'?" The answer is that the entity and the non-entity constitute the 'tat or 'that.' What the questioner seeks to urge is that the word 'tattva' ('that-ness') being an abstract noun formed from 'tat' ('that'), and as such meaning 'the character or essence of that,' it should be explained what the 'tat' is, whose 'essence' (or character) is expressed by the abstract noun 'thatness.' Our answer to the question, therefore, is that what is meant by 'tat' is that which exists (entity) and that which does not exist (the non-entity); that it must be these that are meant [and not the Prakriti, Purusa, &c., of the other systems] is proved by the fact that what forms the avowed topic (of the Sūtra and the Bhasya) is that which forms the object of the pramanas, and, as a matter of fact, entities and non-entities are what form the 'object of pramanas'; it is for this reason that the word 'tat' must stand for 'entities and non-entities'; the 'nature' (or 'character') of these constitute 'sadasaffva,'-including (a) 'sattva' (existence, the character of the entity) which con-

<sup>\*</sup> Tutprapti '= Acquiring the thing, and ' fatpraptisidhe '-the contrary of the former, i.e., discarding. But the Tat. makes 'fat' (in fatpratisidhe) equivalent to both acquiring and discarding, and 'pratisidhe ' as referring to the negation of both these, -i.e., disregard or indifference.

sists in being the object of the positive pramana, and (b) "asattva" (non-existence) the character of the nonentity, which consists in being the object of the negative pramana. The entity and the non-entity are of two different characters -the one is affirmed and the other is denied; it may so happen that the same thing that is affirmed in one place (where it exists) is *denied* in another place (where it does not exist); e.g., odour is affirmed in reference to Earth, but denied in reference to Water. "If both are objects of pramana, then there comes to be absolute non-difference between the entity and the non-entity." This reasoning is by no means conclusive, we reply. In connection with what we have been saying people may have the notion that, if the entity and the nonentity are both apprehended by pramāņa, then, both, being equally objects of pramana, must be non-different. But this is not right; as the reason put forward (in support of nondifference) is by no means conclusive (being not universally true); because as a matter of fact, we find that all such things as the cow, the jar and the like are apprehended by pramanas, and yet they are different; which distinctly shows that the premise, that 'whatever things are apprehended by pramānas are all non-different,' is not universally true. There is a distinct difference between the entity and the non-entity; inasmuch as, while the entity forms the object of apprehension, and that too independently by itself, the non-entity forms the object of non-apprehension, \* and that also only through something else; that is to say, the entity forms the substratum or object of pramanas independently by itself, while the

<sup>•</sup> The non-entity is said to be the 'object of non-apprehension,' because 'nonapprehension' is only the apprehension of the non-existence of the non-entity; and the non-existence of a certain thing is apprehended through the apprehension of the existence of something else at the place. Though in both cases, we have apprehension, yet the apprehensioon of non-existence has been called 'non-apprehension' for the purpose of distinguishing it from the apprehension of existence,—the two apprehensions being of entirely different kinds.

non-entity forms the object of pramanae, through something else,-viz., through negation.

[In support of the view that the non-apprehension of the non-entity is dependent upon the apprehension the entity, the Bhasya has cited the instance of the 'lamp']; what is meant by this instance of the 'lamp' is-that, in a chamber, the lamp, while making known (perceptible) such things as the jar and the like that exist in the chamber, makes known also those other things that do not exist there ; and no other means (save the lamp) is adopted for the knowing of what does not exist there; what happens is that, when the jar and other things existing in the room are seen, this is followed by the following cogitation in the mind of the observer -' in this room there is no other thing, save those that I see, of the same kind; for if any such had existed, it would certainly have been seen like the jar, &c.; as a matter of fact, however, I do not see any such things; and therefore conclude that no other things exist in this room';--just as such is the case in the case of the 'lamp,' so is the case with Pramanas also; when what exists has been cognized by means of Pramanas, there appears in the mind of the cogniser the following cogitation -- ' in this place there is no other cognisable object,---if any such had existed, it would have been cognised, -as a matter of fact, no such object is cognised,therefore, we conclude that, there being no cognition of any such thing, no such thing exists' .- Thus it is that ' the Instrument of Oognition which manifests (or makes known) the existent thing also manifests the non-existent thing ' (as declared in the Bhāşya, p. 2, lines 7-8).

And [though both the entity and the non-entity form the object of pramanas, yet] the various non-entities (or nonexistent things) are not described in the Sil/ra, because they are never apprehended independently by themselves.

• In reality, however, we must accept the Sūţras as mentioning those non-entities, or Negative Entities, which are in any way helpful in the attaining of the Highest Good; and the Negative Entities that it omits are only those that are not so helpful, and as such do not fall within any of the 'four purposes of man'; and this is exactly what the Sūţra has done with regard to the Positive Entities, of whom also it describes only those that are conducive to the Highest Good. + That some of the Negative Entities (as

• The passage appears to be confused ; but the printed text is what is supported by the *Parishuddhi*. The translation follows the explanation given by the *Tâtparya*; The *Parishuddhi* recognizes the difficulty in the original passage, and remarks that the reason given, ' because not fulfilling the four ends of man,' does not prove the conclusion in the form of 'uddisto viditavya', ' it offers the following interpretation of the reasoning—' the Sūtras must be regarded as describing the negative entities that are conducive to the Highest Good,—because these come within the four pur poses of man,—like those positive entities that are so conducive'.

+ The reading of the printed text is not very satisfactory ; the word 'prapancha' is not only superfluous ; but it spoils the sense of the whole passage. In this sentence, the words 'bhāva' and 'abhāva' do not stand for Positive and Negative Entities respectively ; but for the presence and absence (respectively) of the capability to help the attainment of the Highest Good. This is how the Tat. explains it ; the reading adopted by it is-abhava upadisto vidifavyah. How the Sutra does make mention of negative entities also is thus explained by the Tat : (1) Pramana, the very first category described in the Sutras, is both positive and negative ;-negative, e.g., when the absence of the cause is accepted as a 'pramäna ' for the absence of the effect ; (2) among Pramiyas also, which form the second category, the most important is apavarga, Final Release, which, as consisting in the negation of pain, is a purely negative entity; and so forth. It is the reading and interpretation of the Tat, that has been followed in the translation. The passage as it stands in the printed text may be rendered as follows-"The Negative Entities become explained indirectly by the explanation of the Positive Ones; and for this reason they are not mentioned separately'. It has to be admitted however that this passage, if interpreted thus, would confuse the preceding passage still further : as if all Negative Entities are so included, how are we to explain the reasoning based upon the Negative Entities not coming under any of the 'four ends of man '?

The whole confusion into which the passage has been thrown has been due to the attempt made by the commentators (the Tätparys and the Parishuddhi) to connect 'chafervarganantarbhdodt' with what follows. In the Translation it has been thought right to follow the lead of these old commentators. If however we do not mind these, the passage becomes tolerably clear ; and may be rendered thus :--

well as Positive Entities) are not conducive to the attainment of Highest Good is proved by the fact that the Sūtra distinctly mentions those Entities (positive as well as negative) that are conducive to it. It is for this reason that the Sūtra makes no mention of those Negative Entities that are not useful (in the attaining of the Highest Good). The Entity is going to be described by means of (as constituting) a comprehensive group of sizteen (says the Bhāṣya; p. 2, 1. 8).

# [First Aphorism Explained.] BHISYA

#### [P. 2, L. 9 to P. 3, L. 2.]

From among (endless) entities (e.g., Pramāna &c., and many such other things as the grains of sand &c.), -

It is the knowledge of the real essence (or true character) of the following sixteen categories that leads to the attainment of the Highest Good—(1) The Means of Right Cognition; (2) The Objects of Right Cognition; (3) Doubt; (4) Motive; (5) Example; (6) Theory; (7) Factors of Inference; (8) Hypothetical Reasoning; (9) Demonstrated Truth; (10) Discussion; (11) Disputation; (12) Wrangling; (13) Fallacious Reason; (14) Perversion; (15) Casuistry; and (16) Olinchers. (Sūţra 1.)

• When expounding the compound in which the above categories are mentioned, each of them should be stated by means of words having the singular, dual or plural form in accordance with the actual number of the category concerned, as described later on. The compound is the *Dvandva* of the copulative class. The genitive ending at the end of the compound word 'Parmāṇaprarmēya.......tattva' has the force of the 'shēṣa't (that is, signified relationship in general); the genitive ending involved in the compound 'tattvajñāna' (which is equivalent to 'tattvasya jñānam'),—as also that involved in the compound 'nishshrēyasādhigamah' (nishshrēyasasya adḥigamaḥ),—has the sense of the accusative.

Those enumerated in the  $S\bar{u}$  tra are the entities or categories for the true knowledge of which the present treatise has been propounded. Thus the present  $S\bar{u}$  tra should be taken as stating in brief the purport of the whole treatise;—this purport being that the Highest Good is attained by the knowledge of the essence of such things as the Soul and the rest; this same idea is further elaborated in the next  $S\bar{u}$  tra—the sense of which is that the Highest Good is attained when one has rightly understood the real nature of—(a) that which is

+ 'Shişa' is a grammatical technical name given to that which does not fall within any of the case-relations denotative of active agency towards an action. In the case of the Genitive, when no case relation is found possible, it has to be taken as expressing mere relationship in general.

<sup>•</sup> The Vārţika makes the sentence 'chārțhā drandrasamāsaḥ' precede 'nirdāshayaţhāvachanam vigrahaḥ'. This also appears to be the natural order: the explananation of the particular form that the *rigraha* is to take can come only after the particular compound has been noted.

fit to be discarded (e.g., pain) along with its causes, (i.e., ignorance and desire, merit and demerit, as leading to pain), (b) that which is absolutely destructive (of pain, i.e., true Bha. Page 3. knowledge), (c) the means of its destruction i.e., the scientific treatises), and (d) the goal to be attained (i.e., Highest Good); these being the four classes or kinds of objects dealt with (by all philosophical treatises).

## VARŢIKA II.

## [P. 11, L. 8 to P. 13, L. 10.]

The Bhāşya (P. 2, L. 8) having declared that the entity is going to be described by means of a comprehensive group of sizteen, what the Sūțra means is that the categories enumerated are the said kinds of 'entity'.

The compound in the Sūțra is said to be of the Copulative class, because it is that compound alone in which each member is of equal importance (and none is subordinated to any other). "What do you mean by this?" The meaning simply is that every one of the categories, Pramāņa and the rest, should be properly understood. If the compound were taken to be of any other kind, all the categories, Pramāņa and the rest, (with the exception of the last, the 'Clincher') would become subordinate adjuncts (to the last), which would mean that none of those are *things to be understood* [which would be absurd].

Each of the members of the compound should be mentioned by means of words having the singular, dual or plural forms &c., says the Bhāşya, (p. 2, 1. 13). The same grounds that we have for using different ' numbers ' in connection with the several categories on the occasion of defining them (later on in the Sūţra), hold good here also, (when we are called upon to resolve the compound into its component factors).

The genitive ending at the end of the compound has the force of the 'sheea',—says the Bhaeya (p. 2, 1. 13.—14).

#### VĀRŢIKA

"What is this shape?" When none of the case-relations is intended to be expressed, we have what is called 'shape is is to say, when what is intended to be expressed (by the termination) is neither a case-relation nor any primary action (which is the invariable concomitant of every case-relation), we have what is called 'shape is for instance, in the case of the genitive in the expression 'brahmanasya kamandaluh' (the Brahmana's vessel', where the genitive denotes mere relationship, and no action of the Brahmana, or any caserelation of his to any action).

[The compound in question as explained above has two factors -([) 'Pramānapramēya.....nigrahasthānāni ' and 'tattvam'; on this point an objection is raised].—" The compound is open to objection, inasmuch as there are incongruities when 'tattva' is regarded as different from 'Pramana' and the rest; and also when it is regarded as not different from these ; for example, if the ' tattva' is something different from Pramana and the rest, then the 'attainment of the Highest Good ' would not follow from the knowledge of Pramana and the rest; as what is declared as leading to that attainment is the knowledge of tattva; just as when one speaks of 'rājapurusānayana', the 'bringing' is that of the purusa, and not 'Pramana' and the rest, then the word 'faffva' in the Suira would be entirely superfluous: if you do not regard tattoa as something different from **Pramāna** and the rest, then it is absolutely useless to have the word 'taffva'."

To this objection some people (who are not sure as to the difference or non-difference of the *faffva* from *Pramāņa* and the rest) offer the reply that in neither of the two cases there is any incongruity. In the first place, if the *faffva* were different from *Pramāņa* and the rest,—inasmuch as it is not an independent entity by itself, it would carry along with it *Pramāņa* and the rest (that are mentioned along with it);

just as when we speak of the 'existence of the fruits' as being in the pit, inasmuch as existence is not an independent entity by itself, it carries along with it the fruits;whence the declaration comes to mean that it is the fruits that are present in the pit; in the same Vár. Page 12. manner, when the Sūtra speaks of 'the attainment of the Highest Good', as following from the knowledge 'of the taffoa of Pramana and the rest,'-inasmuch as 'tattoa' is not an independent entity by itself.-what is meant is that it is the Pramina and the rest (the knowledge of whose real nature leads to the said attainment). Secondly, if the fattor be regarded as the same as Pramana and the rest, the addition of the word "tattoa" would not be entirely superfluous; as it would serve the purpose of precluding all other things, except Pramans and the rest [this preclusion would not be expressed if the word 'tattoa' were absent]; just as, for example, in the case of the expression 'the fixity of the arrow', even though the fisity is nothing different from the arrow, the word serves the purpose of precluding a property (that of mobility) of the arrow. That it to say, just as in the case of the latter expression what is meant is not the arrow merely, but also that the arrow is not something else, i. e. a moving thing ;--in the same manner the purpose served by the addition of the word 'tattva' is that it indicates that what is intended to be declared is, not only that the 'attainment' follows from the knowledge of the real character of Pramana and the rest, but also that it does not follow from the knowledge of anything else (in the shape of such character as are only wrongly imposed upon Pramana and the rest).

The above answer to the objection it not right; as it cannot be proved that<sup>\*</sup> faffva is the same as Pramana and the

Downloaded from https://www.holybooks.com

<sup>•</sup> The Tat. points out that in the case of the 'fixity of the arrow' also, inasmuch as the 'fixity' which is only absence of motion, is a negative entity, it cannot be identical with the arrow, which is a positive entity.

rest. [As will be evident from the facts and reasonings explained in the following paragraphs, from which also the real answer to the objection can be deduced].

Says the Bhāşya (p. 2, l. 16)—'Taţţoajñānānnishshrāyasādh.gamah', 'the Highest Goud is attained by the knowledge of .the real nature (of such things as the Soul and the rest)'. In this clause, the word 'fațţva' (real nature) becomes the objective, by being that which is known; and 'nishshrāyasa' (Highest Good) also becomes the objective, by being that which is attained.

Question :--- "(1) What is real nature ({attoa}? and (2) what is the 'highest good' (nishshrēyasa)?"

Answer—(1) That which forms the basis of a certain thing being cognised in its true form constitutes the *real nature* of that thing; that is to say, in the case of every thing it is found that there is something in it in virtue of which the thing comes to be known as what it *is*,—and it is this something that forms the *real nature* of that thing.

(2) As regards the 'nishshreyasa' or Good, it is of two kinds-seen or preceptible and unseen or imperceptible : that which follows from the knowledge of the real nature of Pramana and other categories is the seen or perceptible good; because as a matter of fact, we find that whenever any one of these categories is cognised, it does not fail to bring about the idea of either discarding or acquiring or indifference (and "But if this view all this is seen or perceptible.) were true, then, all the categories would have to be regarded as objects that are to be known (for the purpose of attaining good); [while we find the Sūtra, 1.1.9 later on, specifying only twelve 'objects of cognition']." The fact of the matter is that (while some sort of perceptible good might follow from the knowledge of everyone of the categories. Pramana and the rest, yet) the highest good (which is imperceptible) follows only from the knowledge of Soul and the

other 'objects of cognition' (specified by the ninth Sūtra. \* The Opponent objects (to the imperceptible good) :-- "As a matter of fact we actually see that perceptible good results from the knowledge of all the categories. Pramana and the rest ; † while on the other hand, there is no proof for-or means of knowing-an imperceptible good that is held to follow from the knowledge of Soul and the rest." It is not true, we reply, that there is no proof for this latter; in fact such is the actual state of things; it is a well-ascertained fact that the Highest Good is attained by the knowledge of Soul and rest : and conversely, when the Soul and the rest are wrongly known. the troubles of birth and rebirth (which constitute the opposite of the Highest Good) do not cease. This we shall explain in greater detail under Sütra 2. Then again, if the Highest Good were to follow from the knowledge of Pramana and the other categories, then Release, (which is the Highest Good) could not belong to only those persons who seek it (by the right means); as there is no person who has nn knowledge of even one of the categories. From all this it follows that the man who seeks Release has to know only the Soul and such other 'objects of cognition' [It is not only from the very nature of things that Highest Good is attained by the knowledge of Soul and the rest]. That it is only the knowledge of Soul and the rest that leads to the Highest Good is also indicated by the fact that the Soul

<sup>9</sup>Says the *Tat* — It is true that the word *niskehröyasa* denotes anything desirable, and some sort of a desirable result is actually attained by the knowledge of such things as Pramāņa and the rest. Bût the good that is really meant by the word in the Sūţra is that *highest* from of it which is attained only by the knowledge of Soul and the rest; and this is *nessen*. The pramāņa &c. are also mentioned as objects to be known for that purpose; as even though it is the knowledge of Soul and the rest only that leads directly to the Highest Good,—yet it cannot be denied that the knowledge of *Pramāņa* and the rest also aids in that attainment *indirectly*.'

*†* We have translated this sentence according to the interpretation of the *Tdiparya*; it appears better to translate it thus—<sup>4</sup> there is no ground for the view that *perceptible* good follows from the knowledge of Pramāpa &c., while *imperceptible* good penults from the knowledge of Soul &c.'

and the other 'objects of cognition' have been separately put forward (by Gautama, in Sūţra 9); if *Pramāņa* and the other categories were the only 'objects of cognition',—and if the Highest Good followed from the knowledge of these only, then the author of the Sūţra would not have specifically mentioned the 'objects of cognition'; in the shape of *Soul* &c. as in that case, all the 'objects of cognition' having been already mentioned in the opening Sūţra, it would be extremely foolish of the author of the Sūţra to specify in a further Sūţra (I. 1. 9) only a few things (Soul, &c.) as the 'objects of cognition.'

Says the  $Bh\bar{a}sya$  (pp. 2-3)—'The same idea is further explained in the next S $\bar{u}tra$ , the sense of which is that the highest good is attained fo. fo. fc.' 'That which is to be discarded' is pain; the 'causes' of pain are ignorance and desire, as also merit and demerit; 'that which is absolutely destructive of nain' is the knowledge of the real nature of things; 'the means of the destruction (of pain)' are the soientific treatises; 'the goal to be attained' is *Belease*. These four are called 'Arthapadani', 'objects dealt with', because it is these that are described and explained by the great teachers in all philosophical treatises.

# III

### [Detailed Examination of Safra I.]

### Вназча.

# [P. 3, L. 3, to P. 7, L. 4.]

An objection is raised :-- "The mention of *Doubt* and the rest apart by themselves is superfluous; because all these, being included either among 'the Means of Knowledge' or among 'the Objects of Cognition', cannot be regarded as different from these."

This is true; but for the good of living beings have been provided the four sciences [Vedic, Agricultural, Political and Logico-Metaphysical], of which Logic-Metaphysics forms the fourth, also called 'Nyāya', the Science of Reasoning; — each of these sciences deals with a distinct set of subjects, and each has its own distinct method of itreatment; and as a matter of fact, Doubt and the rest form the subjects dealt with by the science of Logic-Metaphysics  $\bullet$ ; consequently, if all these were not distinctly enunciated, it would appear that this science dealt with the Soul only, like the Upanisads. It is for this reason (*i. e.*, for the purpose of guarding against this idea) that Doubt and the other categories have been enunciated with a view to indicate clearly the distinctive subjects dealt with by this Science (which thus becomes distinguished from the other Sciences).

[The Author proceeds to show in what manner Doubt and the other categories form integral factors of the Science of Reasoning]. (A) [As regards Doub!, the third among the enunciated categories ' Nyaya' or' Reasoning ' functions neither with regard to things unknown nor with regard to those known definitely for certain ; it functions only with regard to things that are doubtful; as is declared in the  $S\bar{u}tra$ (1-1-41)-' on any matter held in suspense, when the reality of things is ascertained by means of considering the two sides of the question, we have what is called Demonstrated Truth'; - in this Sufra, 'suspense' is Doubt; the <sup>•</sup> considering of the two sides ' constitutes the process of reasoning ; and ' the ascertainment of the reality of things,' which is 'Demonstrated Truth', forms 'the knowledge of the real nature of things.' The form in which Doubt appears is 'or'-' is the thing this or that?; '-it is an uncertain idea that we have of things ; and thus (i. e., being an idea), though it is an object of cognition, and thus already included in the second category (Pramēya), it is mentioned separately for reasons indicated above (i. e., because it forms a necessary factor, the very basis, of the process of Reasoning].

[B] As regards 'Motive' (the fourth category);—Motive is that on being urged by which man has recourse to activity; that is to say, it is that, desiring either to obtain or to acquire which, man has recourse to an action; and as such, this bears upon (or affects) all living beings, all actions and all sciences; and this forms the basis of all reasoning or investigation (Nyāya) [without some motive, or end in view, no reasoning is had recourse to]. "What do you mean by this myāya or reasoning?" It means the examination of

<sup>•</sup>Thus even though Doubt, &c. may be included under the 'Means' and the 'Objects ' of Cognition, it is necessary to enunciate them separately, in order to indicate the several 'subjects ' dealt with by the Science.

things by means of proofs,<sup>\*</sup> that is to say, Inference based upon Perception and Verbal Testimony is called 'Nyāya' or 'Reasoning'; it is also called 'Anvīkṣā' ('investigation') because it consists in the reviewing (anu-ikṣaṇơ) of a thing prevjously apprehended (ikṣiṭa) by Perception and Verbal Testi nony; the science that proceeds by this 'investigation is called 'Anvīkṣikī', 'Nyāyavidyā', 'Nyāyaskāsṭra', the 'Science of Reasoning' (Logic). That Inference which is contrary to Perception and Verbal Testimony † is not true Reasoning; it is false Reasoning.

[It has been asserted that ' Motive bears upon Bhi. P. 4. all living beings, all actions and all sciences'; the author now proceeds to show what motive there is in the three kinds of Discussion, mentioned among the categories.] That in regard to this (above-mentioned 'false reasoning') Discussion and Disputation serve distinct purposes is well known [Discussion being carried on for the purpose of getting at the truth, and • Disputation for that of vanquishing an opponent]; as regards Wrangling, we proceed to examine whether or not it has or serves any purpose. One who has recourse to wrangling is called a wrangler; and when pressed to state what his motive is, if he states his motive, declaring that such is his standpoint and such his theory (for establishing which he has recourse to the wrangling), - then he abandons his character of wrangler (a wrangler being one who does not take up any definite position for himself); if, on the other hand, he does not state his motive, then he becomes open to the charge of being neither an ordinary man of business, nor a serious enquirer ;---lastly, if (in order to escape from these contingencies) he declares his motive to consist in the showing of the impossibility or untenability of the position of his opponent (without the establishing of any position of his own),-then too be becomes open to the same contingencies; for instance, when showing the unternability of the opponent's position, he has to accept the following four factors -- (1) the person showing the untenability (i. e., the wrangler himself), (2) the person to whom the untenability is shown, (3) that (reasoning) by means of which he shows the untenability, and (4) that (untenability) which is shown; and in accepting these, be renounces his wranglership. The true wrangler being one who does not admit anything]. If, on the other hand,

"The Tât explains that by ' proofs ' here are meant the five factors or members of the cylingiam. 'The Tât adds ' Analogy'. he does not admit these four factors, then his assertion that his purpose lies in the showing of the untenability of his opponent's position—becomes meaningless. Then again,  $S\bar{u}tra$  1-2-3 defines Wrangling as a collection of sentences 'wherein there is no maintaining ' (of any definite standpoint); now if the wrangler admits what is declared by means of those sentences, then that becomes his position, which he has to maintain; if, on the other hand, he does not admit what is meant by the sentences, then, those sentences become absolutely meaningless (for him), and his putting them forward becomes a mere random incoherent babbling<sup>\*</sup>.

[Having proved the presence of some motive in all actions, the author takes up the original subject, and proceeds to show how *Example*, the fifth category, and the rest of the categories enunciated, form integral factors in the Science of Reasoning, and what purposes each of them serves.]

[C] As regards Example, the fifth category, --- it is something that is directly perceived-i.e., which can not fail to be perceived (or known) by all enquirers-ordinary men and learned (and which needs no proof, which is self-ovident); this (Example) is, from its very nature, an 'object of cognition' (and thus included in the second category); but it has been mentioned separately, because Inference and Verbal Testimony are both dependent upon it; it is only when there is an Example (to corroborate the premiss, for instance)-and not otherwise-that there can be a Valid Inference, or Verbal Testimony. It is thus on the basis of an Example that all Reasoning proceeds; as in demolishing the Opponent's position, it is necessary to show that it is opposed to (not compatible with) an Example (admitted by both parties); and in establishing one's own position also, it becomes necessary to show that it is corroborated by an *Example*. [There is yet another reason why importance has been attached to Example; it is through this that the position of

<sup>&</sup>lt;sup>o</sup>The Bhā. only puts forward the arguments *against* there being any motive in Wrangling; it does not show how a motive is present in this form of discussion. This answer has been supplied by the Vārţika, wherein it is shown that the definition of Wrangling does not mean that the wrangler can have no position of his own ; all that it means is that is wrangling his *motice* lies, not in the maintaining of any position that he might hold, but simply in showing the untenability of the opponent's position. Hence even though he admits the four factors enumerated above, he does not renounce his *wranglership*.

the atheistic Bauddha becomes doubly untenable]. If the Atheist admits a corroborrative example, he renounces his atheistic (Nihilistic) position [as by Nihilism, all things have merely momentary existence; and hence it is not possible for the Example, which must be in the form of something that existed in the past, to be present at the time that it is put forward]; if, on the other hand, he does not admit an Example. on the basis of what could he attack the position of his Opponent? Further, the enunciation of Example among the categories is necessary, because it is only when the Example has been described that we can have the definition of the 'Instance corroborrative of the inferential premiss' as propounded in Sutras 1. 1. 86 and 37,- 'the corroborative instance is that example which possessing the properties of the probandum is similar to it' (Sutra 36), and also it is 'that Example which, not possessing the properties of the probandum is dissimilar to it' (sutra 37). [Thus the description of Example is found to be a necessary factor in the art of reasoning].

[D] A proposition or statement of fact asserted in the form 'this is so' is called 'Theory' (or Doctrine). This is an 'object of cognition' (hence included under the second category); and yet it has been enunciated separately by itself, because, it is only when there are a number of different *theories*, and never otherwise, that the three forms of discussion—Discussion, Disputation and Wrangling—become possible.

[E] When a certain conclusion has to be proved. number of words (sentences) have to be used; and the five sentences that are necessary for the proving of the conclusion are called ' Pratijna' (Statement of the Conclusion) and the rest; and these five taken collectively are what have been called 'Factors' (the seventh category); all the 'means of knowledge' (or forms of valid cognition) are found to be present among these 'members'; for instance, the 'Statement of the Conclusion' is verbal; the Statement of the **Probans'** is inferential; the 'Statement of the Instance' is perceptional; the Statement of the Minor Premiss' is analogical: and the 'Reassertion of the Conclusion' consists in the ' indicating of the capability of all the aforesaid Statements to bear upon the same object or purpose. It is this five-fold declaration that constitutes the highest form of reasoning [as it is only when thus stated that the Reasoning succeeds in convincing the unbeliever]. It is on the basis of this form of Reasoning again that the three forms of Discussion proceed; they cannot do so without it; and the ascertainment of truth also is dependent on this form of Reasoning. It is for these reasons that though the aforesaid 'members of reasoning,' being in the form of words, are included in the second category, 'Object of Cognition', yet they have been inentioned separately.

[F] Hyrothetical Reasoning is neither included among the four aforesaid 'Means of Cognition '; nor is it a distinct (fifth) Means of Cognition '; it however helps the ' Means of Cognition' in that it leads to the ascertainment of their validity or invalidity, and thereby helps in the attaining of true know-As an example of Hypothetical Reasoning, we have the ledge. following :-- There arises a doubt as to whether the birth of man is brought about by a cause that is itself caused, ---or by a cause that is uncaused, -or it is merely accidental, without any definite cause; and this uncertainty affords an occasion for the functioning of Hypothetical Beasoning, based upon the consideration of the possible causes (and their effects); and it proceeds in the following manner :--- ' If birth is brought about by a cause that is itself caused, then it is only right that on the disappearance of the cause (which being caused is liable to disappearance), there should be cessation of birth ;---if birth is brought about by an uncaused cause, then, the disappearance of the uncaused entity being impossible, there would be no possibility of any cessation of birth ;---if, lastly, it were without a cause, then, as coming into existence without a cause (and as such being uncaused, eternal), it could never cease to be; and hence there could be no cause for its cessation; which means that there would be no cessation of birth. The ' Means of Cognition ' bearing upon the subject-Bhā. Page 6.

matter of the above tend to indicate that birth is due to Karma; and in this they are helped (have their validity established) by the above Hypothetical Reasoning; and thus, inassnuch as Hypothetical Reasoning serves the purpose of analysing the objects of true knowledge, it is regarded as helping in the attaining of true knowledge. Hypothetical Reasoning, even though included in the second category, 'Object of Cognition,' is yet enunciated separately, because, along with the 'Means of Cognition' it is of use in Discussion, both in establishing (one's own position) and in demolishing (the position of the opponent).

Downloaded from https://www.holybooks.com

[G] Demonstrated Truth constitutes that true knowledge which is the result of the 'Means of Cognition'; <sup>\*</sup> it forms the final aim of all Discussion; and Discussion is aided by Disputation and Wrangling. It is the last two categories of *Hypo*thety al Reasoning and Demonstrated Truth that carry on all the business of the world; and it is for this reason that, though included in the 'object of cognition', Demonstrated Truth has been enunciated separately.

[H] Discussion consists in a number of sentences (or declarations) put forward by various speakers, purporting to be reasons in support of several theories, leading ultimately to the acceptance of one of these theories as the 'demonstrated truth'; and it has been enunciated separately for the purpose of indicating its distinctive features; as it is only when it is carried on in accordance with its distinctive charaoteristics that it leads to the ascertainment of truth.

[I and J] Disputation and Wrangling are different forms of Discussion; they are different from Discussion proper linasmuch as Disputation admits of the use of Casuistry &c., that are not allowed in Discussion; and Wrangling does not tend to the establishing of any position, which forms the main purpose of Discussion]; and they have been enunciated separately, because they help in the guarding of the knowledge of truth once attained (by means of Discussion).

[K] Fallacious Reasons are in reality included among the Clinchers (the sixteenth category); but they have been enunciated separately, because from among the 'Clinchers', it is these that can be put forward or indicated in Discussions —the other 'clinchers' being indicatable only in Disputations and Wranglings.

[L, M and N] Perverse Reasoniny, Casuistry and Olinchers have been enunciated separately, for the purpose of showing what they are; as it is only when the real character of these has been shown that these can be avoided by one in his own Bhā. PAGE 7. assertions, and urged with force against the assertions of others; and also when an opponent

<sup>•</sup> The *Tātparya* points out that it is the *membere* of Reasoning that are meant here by 'Means of Cognition'; as it is only in them that we have all the Means of Cognition along with Hypothetical Reasoning. But it adds that in reality Demonstrated Truth is that true knowledge which is led to by Hypothetical Reasoning ; and therefore Demonstrated Truth should be regarded as the result of Perception and all the other Means of Cognition, as aided by Hypothetical Reasoning.

has recourse to casuistry, it can be easily refuted and also easily made use of [indicated and explained to the Umpire; only when its real character is known]\*

#### III.

### VĀRŢIKA.

### [Page 13, L. 10 to P. 22, L. 17.]

An objection is raised-" Doubt and the rest of the categories should not be enunciated separately; as every one of them is included in the second category 'Objects of Cognition'." This is not right, we reply; because the enunciation of these categories serves the purpose of showing the subjects of the Science of Reasoning. You mean to say that, inasmuch as Doubt and the rest are all included in 'the Objects of Cognition' they should not have been enunciated separately; but you are not right; because such enunciation is necessary for the indicating of all the subjects dealt with by the Science we are dealing with. There are four Sciences; and each one of these deals with a different set of subjects; for instance,--(a) the science of Vedic Trinity deals with such subjects as the offering of the Agnihotra &c.; (b) the science of Agriculture deals with the plough and the cart and such other subjects; (c) the science of Government deals with the distinct duties of Kings, and Ministers; and (d) the Science of Reasoning with Doubt &c. Such being the case, if Doubt and the rest were not pointed out as forming its subjects, the Science of Reasoning would come to be regarded as merely a Science of the Soul. "What would be the harm, if it did so become ?" The harm would be that, if it were a science of the Soul only, it would be nothing more than the science of the Upanisads; -and as such, this Science becoming included (like the Upanisads) in the science of the Vedic Trinity, the number of Sciences would be reduced

<sup>•</sup> Thus then it has been shown that Doubt and the other categories, even though included in the first two categories, have been separately enunciated with a view to indicate the subjects dealt with in the Science of Reasoning.

to three only; and thus we would not have the "Four Sciences" (as mentioned in the scriptures). It is for this reason that *Doubt* and the other categories have been enunciated separately.

[A] Of the categories in question, Doubt consists in that form of cognition which is uncertain in its character. "To speak of a cognition as cognition, and yet call it uncertain is a contradiction in terms." There is no contradiction in this; we are actually cognisant of this character (uncertainty) of some cognitions: in course of our experience we actually feel 'I have an uncertain, a doubtful, cognition'; and (it is so called) because (even though it is the 'cognition an object) it does not distinctly apprehend (render knowable) the definite form of that

object; and thus it is a cognition and at the same Var PAGE 14. "In what manner does this time*uncertain*. form an integral factor in Reasoning?" Because, says the Bhaşya (P. 3, 1. 8,) 'Reasoning functions neither with regard to things unknown nor with regard to those known definitely for certain'. " To say that a certain object is known, and yet not known for certain is a contradiction in terms :\* That which is known cannot be not known for certain: if it is not known for certain it is not known at all; and hence to say that a thing is known and yet not known for certain is certainly a contradiction in terms." There is no contradiction here either ; as it is quite possible for a thing to be known in a general way (in its indefinite form) and yet be not known for certain in its specific details. "Even so, the self-contradiction does not cease; as it would certainly involve a self-contradiction to call a thing "not known for certain' in that form in which it is 'known' †"

<sup>•</sup> The declaration of the *Bhāşya*—'Reasoning functions neither with regard to things unknown, nor with regard to those known for certain'—means that Reasoning functions with regard to things that are *known* and yet not *known for certain;* and it is in this that the objector finds a self-contradiction.

Thus also there is no self-contradiction; for the simple reason that you add the qualifying phrase in that form which (which shows that there is some form of the object known that is not known for certain); if the thing were known for certair in all its forms (in which it is known), then there would be no sense in the assertion that the thing is 'known for certain' in that form in which it is 'known'. Hence it is quite reasonable to hold that a thing may be known in its indefinite form, and yet be not known for certain in its definite specific details.

Thus then, it is for this reason—[*i.e.*, because Reasoning never functions either with regard to things unknown or to those that are not known for certain, but it functions only with regard to things with regard to which there is a Doubt] that, even though included in 'Objects of Cognition' (the second category), Doubt has been mentioned separately by itself.

[B] As regard Motive-the question may be asked: "What is Motive?" It is in answer to this that the Bhāşya says-" Motive is that urged by which man has recourse to activity';-and in this the Bhāsya declares what is found in Next comes the question—" What ordinary experience. is it by which man is urged to activity?" Some people hold that man is urged to activity by Righteousness, Worldly Prosperity, Desire and Final Release. But we hold that by what man is urged to activity are attaining of pleasure and avoiding of pain; and it is only because they are the cause of pleasure and pain \* that all things urge all conscious beings to activity. This Motive forms the basis of Reasoning. (Bhā P. 3, L. 14). "What do you mean by basis here? It certainly cannot mean the receptable or the container." What is meant by Motive being the 'basis' of Reasoning is that it is an aid to

<sup>•</sup> The thing causing pleasure urges the man to acquire it ; while that causing pain urges him to avoid it.

it; as a matter of fact, the whole process of investigation has its source in a Motive; it is only when there is some Motive that one has recourse to investigation; and hence it is the Motive that sets the investigation into operation. "What do you mean by investigation ?" 'Investigation ' is "What then is ' reasoning '?" reasoning. · Reasoning', says the Bhāsya, 'consists in the examination of things by means of proofs.' (P. 3, 1. 15) That is to say, Reasoning consists in the due ascertainment of the real character of a thing by means of all the Means of Cognition collectively; \* in cases where any single Means of Cognition brings about the apprehension of a thing, it is not called 'Reasoning'; it is only when all the Means of Cognition bring about the apprehension collecively that they constitute ' reasoning.' It is this that forms the 'highest form of reasoning', as it is by means of this that one can convince his Opponent,-as we shall explain later on† (Bhā. p. 5, Vār. p. 18, ll. 9 &c.).

The Bhāşya (P. 3, 1. 15) has also defined Reasoning as 'inference based upon Sense-perception and Verbal Testimony.' Here what is meant by the Inference being 'based upon' Senseperception &c., is that it should not be contrary to factor ascertained by Sense-perception and Verbal Testimony. As a matter of fact, we find that when what is known by means of Inference is corroborated by Sense-perception and Verbal Testimony (as represented in the members of the syllogism), the knowledge attained becomes more clear where there is no mutual corroboration among the several Means of Cognition, each being presented (in the syllogism) in a form pointing to an entirely different conclusion, we

<sup>•</sup> The different 'members' of the syllogism are got at through different 'Means of Cognition'; for instance, the Minor Premiss by Analogy, the Statement of the Conclusion by Verbal Testimony, and so forth.—See Bh2. p. 5.

<sup>4</sup> The Tat. points out that it is regarded as the 'highest' because it has all the means of Cognition for its auxilliaries.

have what is called a mere 'Muddle' or 'Confusion' of Reasoning ; and it is such Confused Reasoning that is put forward as 'ostensible philosophy' (or mere semblance of philosophy) by people seeking after either pecuniary gain, or respect or fame (and not really knowing the truth). This is what is meant by the *Bhūsya* when it declares that—'that Inference which is contrary to Perception and Verbal Testimony is not true Reasoning, it is false reasoning.' (P. 3. l. 17)

(1) As an Example of 'Inference contrary to Perception,' we have--' Fire is not-hot, because it is a product, like "Wherein lies the contrariness or incongruity the jar.' of this Inference ?" It lies in this that it has been put forward in regard to a thing which is not a fit object for Inference; that is to say, the Inference pertains to a thing which is not an object of Inference; it is not an object of Inference, because the thing with reference to which the Inference has been put forward (i.e., the non-hot character of fire) is one that has been rejected or negatived by Perception<sup>\*</sup> [and as the operation of Perception precedes that of Inference, by the time that the latter has an opportun-Ity of operating, the object in question has been negatived]. Some people (among others, the Bauddha logician Dinnāga) cite as an example of 'Inference Contrary to Perception', the following-' Sound is not audible &c., &c.' But these people do not know what forms the true object of Perception "How so?" or of Inference. Because, as a matter of fact, the functioning of all sense-organs is beyond the reach of the senses, and 'audibility' is a function of the sense-organ (of hearing); and as such, how could it ever form

<sup>•</sup> The translation follows the interpretation of the *Tat*. From what the Värtika says in regard to the next example of Inference, cited by Dinnäga, it appears better to translate the passage thus :-- 'The thing with reference to which the Inference has been put forward—*i.e.*, the touch of fire—is one that lies within the province of Perception (and as such it cannot rightly form an object of Inference).

an object of Perception [and if 'audibility' is not an object of Perception, how can any Inference of *inaudibility* be 'contrary to Perception'?]

(2) As an example of 'Inference contrary to Verbal Testimony', we have the following-'the human skull is sacred, because it is a part of the animal body, like the conch-shell.' "In what way can this Inference be called contrary to Verbal Testimony ?"\* Our reply is as follows-When one asserts that the human skull is sacred, it becomes necessary for him to explain what is meant by this sacredness; that is, what is meant by asserting that the skull is sacred; if it means that if a man touches the skull, no sin accrues to him.-then it should be pointed out for what man there is no sin (in the touching of skull); if in answer to this, the objecting Bauddha should declare that it is he himself to whom no sin accrues by the touch, then, it is quite true : taking his stand, as he does, upon his own scriptures, it would be as he says, with regard to himself [i.e., to him the skull will be quite a sacred object ]! If, however, he were to assert that it is the believer in the Vedas to whom no sin would accrue by the touching of the skull,-then, isasmuch as all believers in the Vedas accept the Vedas as 'Verbal Testimony', the assertion of the sacredness of the human skull would be a clear case of 'contradiction of Verbal Testimony' [as the Vedas distinctly declare the skull to be an unclean thing.] Then again [to the Bauddha who. independently of Verbal Testimony or Scripture, would seek to establish the cleanliness of the skull by means of -What is the meaning of the assertion that 'the human skull is sacred'? This assertion is in the form of a specification; and being a specification, it implies the negation or

<sup>•</sup> This question emanates from the Bauddha for whom the Shruşi text that declares the unclean character of the skull, does not constitute 'Verbal Testimony.'

exclusion of all other things; thus then, when you assert that 'the human skull is sacred' (it implies that something else is not sacred); it becomes necessary for you therefore, to point out what is not sacred [and this cannot be done by one who rejects all scriptures; as scripture is the only guide on the matter of sacredness and non-sacredness]. If, in order to avoid this contingency, you make your assertion imply that all things are sacred (and the assertion be taken as not implying the non-sacredness of any thing),—then the Inference becomes open to the objection that it can have no Corroborrative Instance (a necessary factor in all Inference), for the simple reason that all things are made to be included in the 'Subject' of the Inference.

[In describing the Wrong Inference, the Bhasya has explained it as that which is 'contrary to Perception and Verbal testimony'; against this the following question is raised] -""Wherefore should not Inference be spoken of as Contrary to Inference (also)"? The reply to this is that, inasmuch as there is no possibility of two (contradictory) Inferences with reference to one and the same subject, there can be no 'contradiction' (of one Inference by another)\*; as a matter of fact. it is not possible that with regard to one and the same thing there should be two Inferences, fully equipped with all necessary negative and affirmative premises; and consequently an In-. ference can never be 'Contrary to Inference'. "From this Var. PAGE 16. same reasoning it follows that Inference cannot be 'contrary to Perception' either." This certainly does not follow; because as a matter of fact an Inference fully equipped with negative and affirmative premises is actually rejected (or sublated) by Perception [and this is

<sup>•</sup> The sense is that whenever there are two contrary conclusions obtained by two Inferences, the one Inference does not reject the other in favour of itself ; what happens is that they nullify each other, it is only when of two contrary cognitions, one is by its very nature, more authoritetive than the other, that there is that real contradiction whereby one rejects the other.

due to the fact that the latter is more authoritative or trustworthy than the former; and as such there can be no nullification of both, as in the case of two Inferences, which must be cf equal strength ].

"[Granting that Inference cannot be 'contrary to Perception' | wherefore cannot Inference be 'contrary to Analogy' [and yet the Bhāsya does not mention this]?" • It is not that Inference cannot be 'contrary to Analogy'; and yet the Bhāsya does not mention it, because it is already included or involved in the contradiction of the former two 'Means of Cognition' (i. e. Perception and Verbal Testimony); that is to say, the 'contradiction of Analogy' is involved in the contradiction of the other two 'means of cognition'; for instance, we shall point out later on that † Analogy consists in the cognition of similarity (which is perceptional) dependent upon (i. e. aided by) remembrance due to impressions left by Verbal Testimony (and this latter is *Verbal*); and thus the contradiction of this Analogy would be already included in, and implied by, the 'contradiction of Perception and Verbal Testimony' (mentioned in the Bhāşya).

Says the Bhāsya (P. 4, L. 1).— 'That in regard to this, Discussion and Disputation serve distinct purposes is well known.' In regard to this, an objection is raised—"Why should this subject be introduced in this place? [after 'Motive' has been explained, it was necessary to take up Example, which is the next in the list of categories,—and not Discussion &c.]." The answer is that the subject has been rightly introduced by the

<sup>•</sup> In view of the fact that the Värtika does not deny the possibility of Inference being contrary to Analogy, but only makes it follow from the Contradiction of Perception and Verbal Testimony,—the Tât. has construed this passage in the manner in which it has been translated.

<sup>&</sup>lt;sup>†</sup>The Analogical Cognition —in the form 'this animal is called were, —is brought about by the perception of similarity as aided by the remembrance of the trustworthy astertion that 'the animal ressembling the cow is called *gaugue*'. Hence every case of 'Contradiction of Analogy' would only be a case of 'Contradiction of Perception and Verbal Testimony.'

.Bhāşya in the present context, with a view to consider what motive (or purpose) there is in Discussion and Disputation;the consideration of this matter being necessitated by the previous declaration of the Bhāşya to the effect that 'Motive bears upon all living beings, all actions, and all sciences'; [and thus the discussion started by the Bhasya actually forms part of the explanation of ' Motive ', and does not introduce the subject of Discussion and Disputation as independent categories.] It is with this view therefore that we have the Bhasya declaring-'in regard to this. Discussion and Disputation serve distinct purposes';--'in regard to this', that is, in regard to (in connection with) the 'false reasoning' spoken of in the preceding sentence.\* [This being universally admitted as regards Discussion and Disputation, the Bhūsya continues]-'As regards Wrangling, we proceed to examine whether or not it has any purpose (to serve).' Some people hold that, consisting as it does of mere fault-finding, Wrangling cannot have any purpose or motive. This however is not true; because, as a matter of fact. Wrangling is not mere fault-finding; a man is called a wrangler when, though taking up a position, he does not make it his business to establish it (but proceeds merely to demolish the position of the adversary); in fact, if he were not to take his stand upon a definite theory or position, he would be derided and dismissed as a mere madcap. Says the Bhāsya -If he declares his motive to consist in the showing of the untenability of the position of his opponent, then also he becomes open to the same contingencies; and the sense of this is that even so, if he accepts the four factors-mentioned in the Bhāsva. -that constitutes his 'position'; and if he does not accept these, then he becomes fit for the merest derision and neg-

<sup>•</sup> It is only with regard to 'false reasoning' that Discussion and Disputation have their use ; because in both of these the reasonings propounded by both parties cannot be true ; hence it becomes necessary to ascertain whose is 'true reasoning' and whose 'false reasoning'; and this purpose is served by Discussion and Disputation.

lect. \*Then again, Wrangling has been defined as that sentence which does not establish any counter-theory; now if the wrangler accepts the meaning of this sentence, that becomes his position; if, on the other hand, he does not accept the meaning of the sentence (that he himself pronounces), he makes himself ridiculous. Thus has Motive been explained.

[C] As regards *Example*, it has been defined (in the Bhāşya) as that which is directly perceived. "What do you mean by this ? "---asks the Opponent.† What is meant is that a thing, that is not beyond the range of the knowledge of (i. e., incapable of being known by) ordinary men and philosophic enquirers, constitutes an Example. It is only thus that the Soul and the rest become included. That is to say, it is only when the definition of Example is interpreted to mean ' that which is not incapable of being known.' that it can include such (imperceptible) things as the Soul and the like (which are actually found to be cited as Examples in philsophic treatises); if on the other hand, the *Example* is declared to be such as must be amenable to Sense-perception. 1 the Soul and such other things become entirely excluded ; and this would militate against those aphorisms (of Gautama) wherein these things (the Soul and other imperceptible things) are actually cited as examples. The Example, defined as above. is included in the second category of the 'object of cog-

•The sentences put forth by the Wrangler are intended to show that the position of the adversary involves certain fullacies; if he then accepts the truth of this assertion' this may be regarded as the position taken up by himself; if he does not accept its truth, he purposely declares what is false.

<sup>†</sup>The sense of the objection raised by the questioner is that the definition is so palpably absurd that it must mean something en'irely different from what it appears to mean; everything that is directly perceived cannot be an *example*; nor is every example such as is directly perceived, because we find many examples cited as such, which are not *perceptible*, but cognisable by other means of cognition.

**‡The printed edition reads** '*pratyakitdi*', but the '*ddi*' appears to be superfluous; as the original definition mentions only '*pratyakia*.' If we must retain '*ddi*,' the meaning would be that if any one of the various means of cognition be specified' such things as are not cognisable by that means would become excluded.

nition', because it is actually found to be cognized; and yet it has been enunciated separately be-TAR. PAGE 17. cause all Reasoning is based upon it : as is pointed out by the Bhasya-it is only when there is an example, and not otherwise, that there can be a valid Inference or Verbal Testimony; the meaning of which is that, as a matter of fact, it is only when a thing has been perceived [before, in a well-known substratum, which forms the Example] that it comes to be inferred [in another substratum] (which shows that Inference is based upon previously known examples): and it is only what is already known that is spoken of to others \* (which shows that Verbal Testimony is based on previously known examples). There is yet another reason why Example has been enunciated separately : It is through this that the position of the Atheist is shown to be untenable, involving a self-contradiction if he admits of an example, as well as if he does not admit one; this has been fully explained in the Bhāşya.

[D] The specification of a definite opinion is what is called '*Theory*',—this 'opinion' being expressed in the form either of 'this' or 'thus'. † The former is the mere mention of a thing in a general way; while the latter points out its distinctive characteristics; when these opinions are specified,—as that 'this is the opinion

"When one has known in a number of cases that a certain word denotes a certain meaning,—then alone is he able to speak of the thing to others by means of that word

\*The translation deviates a little from the interpretation of the Tä\$parya. Herein the ' this ' is rightly explained as referring to the object; but when it adds that the ' this ' refers to opinions common to all philosophical systems,—and thereby is made to take the mention of 'this is the opinion of the Sāňkhyas, &c. &c.' as only a partial illustration,—it appears to, be unnecessarily forcing the interpretation ; because if ' this ' referred to universally recognised things, how could the Vārţika say—'this is the opinion of the Sāňkhyas &c. &c.'? The sense appears to be simple enough :—the, ' this ' refers to the mere enunciation or enumeration of the categories, while ' thus' refers to the further delineation of the characteristics of those categories. This interpretation alone makes the following objection possible.

Downloaded from https://www.holybooks.com

of the Sānkhyas', ' this the opinion of the Yogas',--they come to be known as Theories. An objection is raised-"[If Theory consisted only in the aforesaid specification, then] in that case the name ' Theory ' could not rightly be given to those theories that are common to all systems,--inasmuch as in the case of these no specification would be possible : for the simple reason that they do not belong specifically to any particular system." This is not right. we reply; because in the case of such theories, we could have the specification in the form-' Such is the opinion of all.' Even though Theory is included in the second category of ' Objects of Cognition ', yet it has been enunciated separately, because it forms the subject of all Discussion &c. ; it is only when there are different Theories (with regard to the same thing) that we have Discussions, Disputations and Wranglings with reference to them.

[E] As for the 'Factors of Inference' (mentioned as the seventh category), they are various parts of a sentence. "What is this sentence of yours?" [When a number of words are used] there is an idea afforded by the word denoting the object; and when this idea is taken along with the remembrance that is afforded by the other word denoting certain qualifications of that object,—by the help of that remembrance we get at the idea of that object as qualified by, or related to, that qualification; and that which is the means of getting at this idea of the qualified object, is what we call 'Sentence'. † And it is the 'parts' of such a sentence that have been referred to above as forming the 'factors." "How many of these parts are there?" As many, we reply,

**†** "A sentence is a conglomeration of such words as give rise--[directly by means of one word and indirectly by the remembrance of the other words]-----to one connected idea'--says the Tapperys.

61

<sup>•</sup> The sense of the questioner is that all the individual letters having only momentary existence, they can never coexist, and as such they can never coalesce to form what is generally known as ' sentence.'

as are necessary for the accomplishment of the conclusion. "What do you mean by conclusion ?" The conclusion consists in the object in question having the particular character that is sought to be proved. "What then do you mean by accomplishment?" It is the cognition or idea of the object as possessed of the character in question.\* These 'Factors' are mentioned by name in the Bhāşya, as 'Statement of the Conclusion and the rest.', [The Bhasya P. 5, L. 3. adds ' all the means of cognition or forms of valid cognition are found to be present among these Factors; for instance, the Statement of the Conclusion is verbal, &c., &c. Against this an objection is raised]-" It is not right to say that the Statement of the Conclusion is verbal; because Verbal Testimony always affords a certain and definite cognition of the truth or real nature of things; while what is asserted in the Statement of the Conclusion is something that is yet to be proved (by means of the Reasoning)." The reply to this is that, as a matter of fact, what is sought to be proved (by means of the Reasoning) is that which is known Verbally (by means of the Statement if the Conclusion); hence there is nothing wrong in the assertion that the Statement of the Conclusion is Verbal ;- that is to say, the Statement of the Conclusion is *Verbal*, in so far that by means of the Reasoning, the Reasoner tries to make known to another person what he has himself known by the means of the words (of the Statement of the Conclusion).† Similarly, when the Bhāsya

• The distinction between the two is that the former means only the actual presence of the character in the object ; while the latter means the recognition of that presence, of the object as possessing that character.

 $\dagger$  The translation is not exactly in keeping with the commentary. The sense of the reply, according to it, would be as follows—"What the Logician wishes to prove by means of his reasonings are such things as the existence of the Soul &c., &c., all of which he knows' in the first instance, by means of the verbal testimony of the Scriptures." That such is the sense accepted by the commentary is indicated by the remark—" Even though the statement of the conclusion in all reasonings cannot be Agama, yet what the author has in mind are the reasonings of the

speaks of the probans being inferential, it applies the name of 'Inference' to the mere perception of the probans (independently of its relation to the subject); that is to say, the second perception of the probans that we have [at the time of the recognising of the Minor Premiss, asserting the presence of the probans in the subject,-the first perception being at the time of the recognition of its concomitance with the probandum] becomes the cause conducive to the incitement to activity of the mental impression of its concomitance (with the probandum,-which concomitance has been perceived on a previous occasion, and an impression whereof has been left upon the mind); and it is for this reason that it has been called 'hetu' or cause ; and it is the ' statement' of this 'probans' that has been called figuratively \* 'inference'. (in the Bhāsya). In the same manner, the  $Bh\bar{a}sya$  speaks of the Instance as perceptional, because it serves to present the object of remembrance (i. e., the invariable concomitance between the probans and the probandum) to be as certain as if it were actually perceived. † That is to say, what the Reasoner does is to remember something (the concomitance) that he has previously perceived, and then puts it forward as the instance ; and thus, inasmuch as this statement of the instance is

Naiyāyika." It appears better however to take the reply to mean that all that the Statement of the Conclusion does is to make known *verbally* what is sought to be proved by the reasoning.

• Why the Probans should be figuratively called 'Inference 'is thus explained by the Parishuddhi—Inference, as the means of inferential cognition, consists of the two factors of (1) the remembrance of the invariable concomitance of the probans with the probandum, and (2) the recognition of the presence of the probans in the subject; now this Inference is helped by the remembrance of concomitance; the Probans also, in the bringing about of the recognition of its presence in the subject is helped by that same remembrance; it is this similarity that forms the basis for the the application of the name 'Inference' to the statement of the Probans.

*†* The statement of the Instance has been called *perceptional*, because what it recalls has been previously known by means of Perception, and also because it recalls it in a form as much beyond all doubt as if it were actually before the eyes at the time.

in full accordance with what has been directly perceived before, it is like Perception itself (being as much beyond

doubt as any fact of perception ; and as such it VAR PAGE 18. has been spoken of as perceptional. " What do you mean by saying that it is like Perception ? " What it means is freedom from doubt) ; just as there is no doubt (or difference of opinion) with regard to a fact of Perception, so also there is none with regard to the instance. Similarly the Bhasy is speaks of the Statement of the Minor Premiss as analogical; and this is due to the character of 'analogy' being attributed to that one factor of real Analogy, which consists of the idea of 'as that so this'; that is to say, analogy (pertaining to the animal quaya, for instance) is dependent upon the assertion 'as the cow so the gavaya',---consisting in the apprehension of similarity (between the cow and the gavaya) before the eyes; this Analogy comes about after the due comprehension of the assertion involving the idea of 'as that so this', and is aided by Perception and Verbal Cognition and Remembrance \*; and thus in this, the idea of 'as that so this ' forms one of the factors ; and to this one factor people figuratively apply the name of 'Analogy' [and it is on the basis of this figurative application of the name

The process of analogial cognition is thus explained in the Tatpary -- First of all the man must have the verbal cognition in the shape of the knowledge of the assertion <sup>4</sup> as the cow so the gavaya'; (2) knowing this when he goes to the forest, he sees a certain animal before him-this is the factor of Perception : (3) then he remembers the meaning of the aforesaid assertion ; through the aforesaid Perception and Remembrance he perceives the similarity of the cow in the enimal before him; it is this cognition of similarity that constitutes analogy (Upamana as the means of cognition), which is the means of the analogical cognition in the form 'this animal is named gavays.' Thus Analogy is found to be composed of the factors of-(1) verbal cognition in the form 'as that so this', (2) the remembrance of that cognition, (3) the perception of the animal and its similarity to the cow. The statement of the Minor Premiss is in the form ' this mountain has fire (just as the culinary hearth has fire)'; in this we have the same notion of ' as that (hearth) so this (mountain),' which notion forms one factor in the analogical procese ; and, if we apply the name Analogy to this factor, we are justified in saying, that the statement of the Minor Premise is analogical.

Downloaded from https://www.holybooks.com

that the Statement of the Minor Premiss is analogical]. Lastly, the Bhasya has defined the 'Reassertion of the Conclusion' as consisting in the indication of the capability of all the aforesaid statements to bear upon the same object or purpose. In regard to this the question is raised -"What do you mean by the statements bearing upon a single object?" What is meant is that they are treated as 'one sentence' (syntactically connected with one another). "What do you mean by capability ?" \* What is meant by 'capability' is that every one of the statements in question is dependent upon what is expressed by another; we shall explain this later on. The word 'Nigamana' (the technical name for the final Reassertion of the Conclusion) also literally means 'that by means of which all the other Factors of the Reasoning are tied together (nigamyante anena), i. e. made to bear upon a single object.'

Says the Bhāsya—It is this fivefold declaration that constitutes the highest form of Reasoning. Question: -"What do you mean by its being the highest form?" What is meant is that it is only when the Reasoning is presented in the aforesaid form (of the five sentences taken together as syntactically related to one another) that it succeeds in convincing, or bringing the conclusion home to, the opponent or the unbeliever. When each of the † statements is put forward

• 'Capability' as here spoken of is a character belonging to the verbal statements; and what is meant is that they are so inter-related that if they are taken severally by themselves, they are found to be *wanting* in some essential feature; and it is only when they are taken as collectively bearing upon a single object or purpose that they are found to be *complete*; this one purpose in the present case consists in the presenting of the probane complete in all its parts; and the capability referred to is the character of collectively tending to accomplish this one purpose. It may be noted that the commentators base this interpretation upon Jaimini's definition of 'one sentence' contained in his stifra 2: 1. 46.

† From the context it is clear that the word 'pramāņa' here stands for the various 'factors' of Reasoning,-which have been shown to involve the various Means of Cognition or Pramāņa'; that this is so is clear from the next sentence. The Tāţparya, on the other hand, takes the word as referring to the Pramāņas in by itself, it does not convince the opponent; on the other hand, when all the five are put forward in a body they do convince him; and it is in this fact that lies the 'highest' character of the Reasoning.

[With regard to the 'Factors' of Reasoning a further question is raised]-" Do these Factors form a Means of Cognition other than those enunciated among the Pramanas? Or are they included among those same?" What do you mean by raising this question ?-we ask. The questioner explains his point :-" If they a form Means of Cognition other than those enunciated, then it is not right to omit the mention of these (among the Pramanas); if on the other hand, they are included among those same Pramanas, then, the separate mention of the Factors' becomes entirely superfluous." Our answer to the above is that the Factors are not distinct Means of Cognition; and yet they have been mentioned separately-(1) because it is only these, when taken together as collectively forming a single sentence (i. e. being syntactically connected), that bring conviction to the unbeliever; (thus serving an important purpose, not served by any other means);---and (2) because it is only as distinct (from the well-recognised Means of Cognition) that the Factors serve the purpose of setting going the several forms of Discussion, Disputation and Wrangling; and as such they form the basis of the "What do you mean by the ascertainment of truth. Factors being the basis of the ascertainment of truth ?"

general, and not to only those involved in the 'factors of reasoning'; and this interpretation makes it necessary for the commentary to add the apologetic sentence —"though each of the Pramāņas, Perception and the rest, is severally found to be sufficient for convincing the people, in regard to all ordinary matters, yet what the text is referring to are such extraordinary subjects as the existence of the Soul, the trustworthiness of the Veda and such other matters relating to the Highest Good; none of these matters can be brought home to the unbeliever except by means of the five-membared reasonings propounded in the Nyāya treatises."

Downloaded from https://www.holybooks.com

What we mean is that they are the cause or means of getting at the true knowledge of the real character of things.\*

[F] With regard to Hypothetical Reasoning the Bhasya save-Hypothetical Reasoning is neither included among the four 'Means of Cognition', nor is it a distinct 'Means of Ouguition'; and the reason why this is so lies in the fact that it does not bring about any definite cognition; that is to say, as a matter of fact 'Means of Cognition' always bring about definite cognitions, while Hypothetical Reasoning does not do this; as such, it cannot be included among the 'Means of Cognition'; and for the same reason it cannot be regarded as a distinct 'Means of Cognition'. [And yet it had to be enunciated, because] it serves the distinctly useful purpose of scrutinizing the subjectmatter of the Means of Cognition, and thereby helps these latter (i. e. makes them truly effective). "It has been said that Hypothetical Reasoning scrutinizes the subjectmatter of the Means of Cognition,-what do you mean by By 'scrutinizing' in this connection we this scrutinizing?" mean the ascertaining of validity or invalidity; that is to say Hypothetical Reasoning helps to ascertain that such and such a cognition in valid, and such and such is invalid; † all that it

† This passage explains in what manner Hypothetical Reasoning operates. The sense is that, as a matter of fact, the Means of Cognition is found to bring about cognitions; and as such being an Instrument, it stands in need of a definite procedure whereby it could bring about the cognition. This much-needed procedure is supplied by HypotheticalReasoning, which, consisting of the consideration of validity and invalidity, helps the Means of Cognition by ratifying the cognition brought about, if it is found to be valid; and it is only the Means of Cognition thus helped that can be truly effective in the bringing about of a right cognition. Hypothetical Reasoning by itself cannot bring about definite cognition; because being hypothetical in its form, it is de. pendent upon a negation, and as such cannot itself form an adequate instrument. Hypothetical Reasoning is said to be hypothetical, &c., because it is found in the form --'if such and such (as indicated by the Means of Cognition) were not the case, such and such would be the incongruities involved.' (Tätparya-Pa.ishuddhi.)

<sup>•</sup> Says the Parishuddhi—The object, as enclowed with the character that forms the probans, is known by means of the *factors*, directly,—while as endowed with the character that forms the *probandum* it is known by their means, but indirectly through the knowledge of its former character.

does is to ratify or corroborate (by rejecting Var. PAGE 19. all contrary contingencies) that cognition which is found to be valid; and it has nothing to do with the actual cognition of things (which is brought about by the Means of Cognition); and because it does not bring about the Cognition of things, it cannot be regarded as a distinct 'Means of Cognition' by itself. In the example cited in the Bhāsya, the cognition represented as ratified by the particular Hypothetical Reasoning is-'Birth is due to Karma';\* and with regard to this the Opponent asks-"How do you know that birth is due to Karma?" We know that it is so because we find (among living beings) a diversity of characters and conditions. "What is this diversity ?" It is found in the form of good and bad circumstances. For instance, in regard to good circumstances, we meet with the following diversity (or varying grades); (1) among beings, there are divine and human beings; (2) among human beings, there are males and females; (3) among males, there are Brāhmanas and non-Brāhmanas; (4) among Brahmanas, some are possessed of efficient organs of perception, while others have only inefficient organs; (5) among those possessed of organs, some belong to high families, while others are born of low ones; (6) among those of high families some have all their limbs intact, while others are maimed; (7) among the former one is learned while the other is ignorant; (8) among the learned, one is self-reliant, while another is timid; (9) among the self-reliant one is independent while another is dependent upon others. Then again, in regard to bad circumstances, we meet with such varying grades as the following :----(1) there are animals and hellish beings; (2) among hellish beings, some are only pierced by thorns of the cotton-tree, while others are tortured by being boiled in cauldrons of iron; (3) among.

<sup>•</sup> The Täpparya explains that 'karma' here stands for virtue and vice, or merit and demerit, techincally called 'dpfirva': and not for action.

animals, one is a cow, while another is something else. This diversity of conditions could not be possible, except through some such cause as is manifold, not momentary and yet not eternal, pertaining to each individual object and to each individual Soul specifically.\* "Why so ?" Because (if there were no such cause, and the diversity in question were due to the things of the world themselves, as for instance, the Earth and the like) then, inasmuch as all such substances as the Earth and the rest would be common to all men,-and as (ex hypothesi) there would no differentiating cause in those substances themselves, all things (and conditions) would belong in common to all men; while as a matter of fact, we actually perceive diversity. For these reasons we conclude that it is Karma which is the cause of the specific diversities in question. This Hypothetical Reasoning is included under the second category of the 'Object of Cognition', because it is something actually cognised. [And yet it has been enunciated separately because it helps the 'Means of Cognition', as explained above, and for a further reason pointed out below, Text, P-19, ll. 20-21.]

[G] Says the  $Bh\bar{a}sya$ —Demonstrated Truth constitutes that true knowledge which is the result of the Means of Cognition. † The Opponent asks—"When is Demonstrated Truth the result of the Means of Cognition?" It is regarded as the result when it is not put forward as the

+ 'The Means of Cognition 'as embodied in the Factors of Reasoning. See note from the Tāt in connection with Bhāşya above (page 49).

<sup>•</sup> Each of these epithets is thus justified by the Tāţparya—(1) The cause must be manifold, because, if it were one only, then there would be uniformity, and not diversity; (2) it cannot be momentary; as it could not bring about the diversity long after its own existence; and yet such is found to be the actual case; (3) it must be not-eternal; as if it were eternal, the resultant pleasure or pain would also be eternal, which it is not; (4) it must pertain to one individual object, because if the same cause affected several objects, there would be no variety among these objects; (5) it must pertain specifically to such individual Soul; as otherwise there would be ne variety in the conditions under which several Souls are born.

means of getting at the cognition of another object; on the other hand, when it is found to lead to the cognition of something else, it is regarded as the *Means* of Cognition;<sup>\*</sup> and there is no such hard and fast rule as that it must be regarded either as 'result' only, or as 'means' only; this we shall explain later on under  $S\bar{u}tra$  2-1-16, where we shall show that one and the same thing comes to be spoken of by means of two words, by reason of its two characters [in the same manner Demonstrated Truth may be spoken of as 'result' and also as 'means', as explained above].

[With regard to Hypothetical Reasoning and Demonstrated Truth taken together] the Bhāsya says—It is the last two categories of Hypothetical Reasoning and Demonstrated Truth that carry on all the business of the world  $\dagger$ . The meaning of this is that it is only when the intelligent man acts after arriving at the demonstrated truth after due reasoning that he is enabled by means of these to discard what he finds fit for being discarded, and to acquire what he finds fit for being acquired.

Demonstrated truth may be regarded as included either vi. P. 20. among the 'Means of Cognition ' (the first category), or among the 'Objects of Cognition ' (the second category); that is to say, when it is a *result* it is an ' object of cognition ', while when it is a *means* of the cognition of other things, it is a 'Means of Cognition '. [Though thus included, yet it has to be enunciated separately, because,

† The Bhäşya takes the two together because the two are invariable concomitants of each other.

<sup>•</sup> For instance, when we infer the presence of fire from the presence of smoke we have the demonstrated truth with regard to the presence of fire; if the process ends with this, we regard this Demonstrated Truth as the 'result'; but if the cognition of the presence of fire leads to the further cognition of the presence of heat, or the possibility of the burning of the mountain, we must regard it as the 'means' of this other cognition.

along with Hypothetical Reasoning, it helps to carry on the business of the world, as pointed out above.]

[H] With regard to Discussion, the Bhasya says that it is carried on by various speakers; that is to say, inasmuch as it consists in the presentation of several theories, it is carried on by several speakers (each putting forward and trying to establish his own theory). The Bhāsya adds -(the sentences are put forward in discussion) purporting to be reasons in support of several theories, leading ultimately to the acceptance of one of these theories as the demonstrated truth. The word 'pratyadhikaranam' in the text of the Bhasya means that which is sought to be proved, i. e., a theory; and the reasons in support of this are called the 'Sadhana' of "What does the Bhāsya mean by this ?" this. What it means is that in Discussion both (or all) parties taking part in it should put forward reasons in support of their theories ;\* and that it must end in one of the theories being accepted as the demonstrated truth; + all this we shall explain later on. "In what form does this Discussion appear". It consists of a number of sentences-says the Bhāşya. An objection is raised—"In Sūțra 1. 2. 1, we find Discussion defined as consisting in 'the proving and refuting (of theories) through Pramanas and Hypothetical Reasoning': by 'pramānas' here must be meant valid cognitions, because Sutras 1. 1. 4 et seq. speak of Perception and the other Pramanas as 'the cognition produced by the contact of the object with the sense-organ'; from which it is clear that all 'pramānas' are cog-

<sup>•</sup> This distinguishes Discussion from Wrangling; in the latter the sole purpose of the Wrangler lies in the discomfitting of his oppcnent; and he do s not concern himself about the establishing of his own position; in fact he does not even put forward any theory of his own.

<sup>+</sup> This distinguishes Discussion from Disputation, in which though both disputants have to put forward their theories, it need not lead to the acceptance of either as the demonstrated truth; as the sole aim of each party lies in showing himself as superior to his opponent; their motive does not consist in the finding out of the real truth of the matter.

nitions; then as regards 'Hypothetical Reasoning'; it is mere conjecture; and this also is only a form of cognition; [thus according to this definition of Discussion as given in the Sūțra, it must be regarded as consisting of cognitions]; under the circumstances, it is not right to speak of it as consisting of of a number of sentences [as the Bhāṣya does]; because a cognition cannot be sentence." This objection is not well-taken, we reply; because the Sūţra (1. 2. 1) that has been put forward means something totally different\* (from the meaning attributed to it by the Objector); as we shall point out when we are explaining that Sũţra.

[I-J] Disputation and Wrangling are distinct forms of Discussion—says the Bhāsya. "Wherein lies the distinc-It consists in the excess and deficiency of certain tion?" factors,; for instance, in Disputation we have the use of Perverse Reasoning, Casuistry and Clinchers; and as such it exceeds the limits of 'Discussion' (in which all these are absent); and this same Disputation, when without the attempt at establishing the counter-theory, constitutes Wrangling (which therefore is deficient in this principal factor, which is present in Discussion). What is meant by the pointing out of these 'distinctions' is that all the three are only different forms of argumentation (they are not entirely different), differing only in the methods of arguments employed in each: another difference (between Discussion on the one hand, and Disputation and Wrangling on the other) is that with reference to the persons with whom they are carried on : Discussion is carried on with a person who is willing to learn; while Disputation and Wrangling are carried on with persons who are perverse in their ignorance (and too proud to learn).

<sup>•</sup> The words of the süţra-'proving' and 'refuting'-mean not the actual proof . and refutation, but the statement of the reasons tending to prove and refute; and osrtainly there is nothing incongruous in speaking of the 'statements' as 'a number of sentences.'

[K] There are four characteristic features of the true Reason (or Probans); when certain Reasons are put forward which are wanting in one or more of these features, -and as such are not true Reasons, and are yet put forward as such, - they are called 'Fallacious Reasons'. In reality these are 'Clinchers': and as such included in the sixteenth Category; and yet they have been enunciated separately; because it is these that can be put forward or indicated in Discussions-says the Bhāsya. This clause of the Bhāsya has been taken to mean that 'because Fallacious Reasons are indicated in Discussions, therefore they are enunciated sepa-But this is not right; in whatever way we take rately.' it, there is no necessary connection; that is to say, in the first place, it is not true that whatever is indicated in Discussions must always be enunciated separately; nor, in the second place, is it true that whatever is enunciated separately must be indicated in Discussions ;\*-because if it were true that whatever is enunciated separately is indicated in Discussions, then all things would come to be indicated in Discussions. "Why so ?" For the simple reason that all things are enunciated separately (i. e. apart from Clinchers); on the other hand, if it were meant that whatever is indicated in Discussions is enunciated separately,-then, that also would not be universally true; because as a matter of fact, we find that the 'Deficient' and the 'Redundant' reasonings (mentioned among 'Clinchers' and defined in Sutras 5-2-12 and 18) are not 'enunciated separately' (as Categories distinct from Clinchers); and yet they are found to be actually 'indicated or urged in Discussions'. For these reasons we conclude that the assertion that the Fallacious Reasons have been enunciated separately 'because they are indicated in Discussions' is not to be taken serionsly.† The real purpose of TAnd it is only if one of these propositions is true that there can be ray validity in the reasoning read in the Bhdsys passage in question. The Värtika apparently rejects the reason given in the Bhäsya, and propounds another reason. The Tdiparya and the Parishuddhi however regard this rejection

the separate enunciation lies in the pointing out of the various distinct methods of the sciences<sup>\*</sup> [the purpose which the Bhäsya has mentioned on p. 3, ll. 4 &c. as applying to the separate enunciation of all the categories apart from the 'Means of Cognition ' and 'Objects of Cognition '.]

To the question—" Being of the nature of Clinchers, why should Fallacious Reason be enunciated separately?" —the answer is—because it is urged in Discussions.† This

as implying the rejection of the sense that has been attributed to the Bhasya, by some people Ekadeshinah. Says the Tat -'The reason for separate enunciation that is meant by the Bha, is as follows: With a view to the real character of Fallacious Reasons, and also to the real purpose of Discussions, which lies in the getting at the truth and not the mere discomfiture of the opponent, it must be admitted that it is not possible for us to urgo all the 'clinchers' in Discussion; it is only a few of these that can be so urged; and the Fallacious Reasons are among those 'clinchers' that can be urged in Discussions; for this reason they are enunciated separately. The Parishuddhi sidds that we thus find that what the Bha. really means is that the fact of the Fallacious Reason being urged in Discussions affords justification for its separate enunciation; it does not mean that there is any invariable concomitance between 'separate enunciation' and 'being urged in Discussions'; and it is in the supposing of this concomitance that lay the mistake of the By this interpretation the sentence of the Vartika-Catadeva tu Ekadëshin. nyayyam prithagupadeshaprayojanam'-must be taken to mean-' what the Bha. can be legitimately taken to mean is that what it has pointed out (the arging in Discussions) represents only the purpose of separate enunciation (and not simply. invariable concomitance between the two circumstances). It will be readily seen however that this interpretation makes the next word ' vidydorasthanajhapanarthafulf-iti' apparently meaningless. The interpretation of the Tat appears too farfetched ; specially in view of the 'ifi ' at the end. The apparent grammatical construction is-'sfadeva nydyyam prayojanam-(what is it!?)-vidyaprasthānajiāpa narthatvat iti (this is it).

\*By the word 'vidyā' (Science) here is not meant the Nydys-shdefra; but the three forms of Discussion, which are called 'vidyā' because they also lead, though indirectly, to the attainment of the highest good. And the Fallacious Reason is mentioned for the purpose of showing wherein the method of Discussion proper differs from that of the other two forms of it (Disputation and Wrangling) in which latter all forms of 'clinchers' are urged; while in Discussion it is only the Fallacious Reason (and a few other Clinchers) that are urged.

+ The whole of this sentence of the Värika appears to be an interpolation. It is not referred to by the Tü; ; as it stands, it does not give any sense. If pramagasimanyāf is altered into 'vādē dēshānīyafvāf ', we have some sense out of it ; but it is a raises the further question—" How can they be urged in Discussions "?" They can be urged, because they have all the semblance of the true Reason [and as such are actually put forward by parties, not indeed knowingly, but under the impression that they are quite *valid* reasons]. That is to say, Valid Reasons are put forward in Discussions, and the Fallacious Reason has the semblance of the Valid Reason; so that on account of this semblance it comes to be put forward in Discussions.

A further question is raised—" It has been asserted that (in Discussion) while some of the Olinchers are present others are not found there ;—whence this restriction imposed upon things ? If it is a mere indicating of things as they actually are,—what is the use of that ? If it is only a command of yours addressed to the things in question (Clinchers)— ' you be so, you may not be so and so '—then, by commanding things in this manner, you make yourself an object of ridicule. If the thing itself really exists as you represent it to be, and in the assertion in question, you only describe it as it is actually found to exist ;—then, it becomes incumbent upon you to explain why a few only of the Olinchers are found in Discussions, and others are not."

There is no force in this objection, we reply. Because, that the thing is so is due to its peculiar character; that is to say, things do not follow the commands of those who

mere repetition of what has already gone before. This repetition might be justified as introducing the next question. The translation has therefore been made with the emendation referred to above.

• The point of this objection is that one party could urge the Fallacious Reason in a discussion only if the other party put forward such reasons; as mentioned in sätra-1-2-1 however, Discussion proper always proceeds by 'pramāņa' and 'tarka', which are all valid; consequently the very nature of Discussion precluding the use of Fallacious Reasons, how could any party urge such against the other The answer is that the party putting forward the reason may not know that it is fallacious, and hence may put it forward as a *bona fide* valid reason; and in this case it becomes possible for the other party to point out the fallacy in the reason.

speak of them ; they are only described (or spoken of) as they are actually found to exist; consequently, when a man speaks of a thing in accordance with its peculiar character, he is not to be reproved as 'commanding' the nature of things. . Thus then (the general principle being recognised that things have to be described as they are) in regard to the subject under consideration, we find that the very nature of Discussion proper is such that it is carried on with persons willing to learn; and it follows from this character of Discussion itself that of all the Clinchers it is only the Fallacious Reason that can be urged (and not such other Clinchers as Embarassment and the like); and this for the simple reason that the matter under Discussion has to be explained and discussed (with the person willing to learn) so long as he does not come to understand the real truth [and this purpose is served by simply indicating the Fallacies that may be involved in the theory taken up by the pupil: and it would not be fair to merely silence him by urging the other Clinchers, which, though silencing him, would not enable him to grasp the truth.] \* Then again, inasmuch as the Fallacious Reason has all the semblance of the valid reason, there is no incongruity in its being met with in Discussions. "How so ?" Because the making of mistakes is natural to man; and hence when putting forward valid reasons it often happens that he propounds reasons which (though

<sup>•</sup> This anticipates the objection that—inasmuch as according to Su. 1. 2. 1, Discussions are carried on by means of Valid Reasons and Hypothetical Reasoning, there cannot be any possibility of its being used by any party in Discussion proper; and when it cannot be used how can it be urged? The reading in the printed text is not in keeping with the interpretation of the Täţparya. According to the Com. there is a distinct statement of the objection and the answer he gives with the next sentence only. In accordance with this interpretation the printed text is defective. But as is stands it gives good sense. The sense of the reply is that when the Fallacious reason is put forward it is not done knowingly; he who puts it forward does so knowing it to be valid; and it is only when the fallacy is pointed out to him that be becomes defeated.

he thinks they are valid) are in reality *invalid* or *fallacious*; Var. Fage 22. and when he does so he is *defeated* [by the pointing out of Fallacies in his reason].

"What sort of *defeat* can there be as between the teacher and his pupil (between whom alone the Discussion proper can be held)?" The 'defeat' in this case simply consists in showing that the view of the party 'defeated ' does not express the truth. \* [ And for this reason what are exposed or urged in Discussions are not only the Fallacious Reasons, but also three other Clinchers, viz. the Defective Reason, the Redundant Reason and the Shifting of the Ground, which also like the Fallacious Reason, are obstacles to the perception of, A question is raised—"How can the three Clinchtruth.] ers-Defective Reason, Redundant Reason, and Shifting of the Ground-be used in Discussions ?" Simply because these also have the semblance of the Valid Reason; both the Defective and the Redundant Reason have all the appearance of the Valid Reason, their deficience or redundancy being only due to their statement containing one or more members wanting or in excess of the necessary; and it is by mistake that these defective statements are put forward in Discussions. The Bhasya says-'the other Clinchers being indicatable only in Disputations and Wranglings'; the meaning is that one whose aim lies in obtaining a victory over-i. e. in bringing about the discomfiture of-his opponent, has to have recourse to

• And it is truth which is sought to be got at by means of Discussion; and the indication of Fallacies becomes necessary because unless they are exposed they obstruct the vision of the pupil who is unable to comprepend the truth. Because this is the sole purpose of exposing the Fallacious Reason, therefore we have to note that when the Bhāşya speaks of the Fallacious Reason being indicated in Discussions, it does not mean that it is only these from among the Clinchers that are to be exposed in Discussions; but all those which are obstacles to the perception of truth, and the exposing of which tends to its due perception; to this class belong the three other clinchers—the 'Defeotive Reason' the 'Superfluous Reason' and 'shifting of the Ground'. Those other Clinchers the exposing of which tends merely to the discomfiture of the adversary are not admissible in Discussion proper. the other two forms of Discussion—viz: Disputation and Wrangling; and in these all 'Clinchers' are to be urged, whenever possible;\* and the Opponent should not be left alone [until his arrogance has given way to meekness and willingness to learn].

[L, M, N] Perverse Reasoning, Casuistry and Clinchers have to be avoided in the arguments propounded by oneself, and have to be urged against those put forth by the opponent; [and it is for this reason that the separate enunciation of these becomes necessary] 'for the purpose of showing what they are', says the Bhāşya; and the meaning of this is that it is for the purpose of making the real character of these duly known to people that they have been separately enunciated.

Ar objection is raised—"It is not right to assert, as the  $Bh\bar{a}_{sya}$  does, that *Perverse Reasoning*, *Oasuistry* and *Olinchers* are 'to be avoided by one in his own assertions',—and at the same time to declare that Casuistry can 'easily be made use of,'; as this involves a self-contradiction. To say that it is to be 'avoided ' and yet 'to be made use of' is to make a a self-contradictory statement; if one is to avoid a certain thing, he cannot make use of it; and hence there is a manifest selfcontradiction in the  $Bh\bar{a}_{sya}$ ."

There is no self-contradiction, we reply; as what is meant is that it serves the purpose of meeting questions; what the *Bhāşya* means by saying that Casuistry is *easily made use* 

Downloaded from https://www.holybooks.com

<sup>•</sup> People who engage in these two forms of Discussion are those who are arrogant and conceited, not those who are willing to learn; hence before they are made acquainted with the real truth, it becomes necessary to relieve him of his conceit; for doing this the worst forms of 'Clinchers' may be called into requisition; for instance, by means of *embarasement* he comes to recognise his weakness, and thus being reduced to meekness, he presents himself as a person willing to learn; and then the superior man engages him in Discussion proper and thereby leads him to the knowledge of truth; thus the worst forms of Discussion also indirectly lead to the acquiring of the knowledge of truth.

of' is that it is pointed out for the purpose of meeting the questions (of umpires); that is to say, when the Opponent, in course of Disputation, has recourse to Casuistry, the other party appeals to the umpires saying—'this man has recourse to Casuistry'; thereupon the umpires ask him—'In what way has he recourse to Casuistry? What particular form of Casuistry is it ?'. Being thus questioned, it is only if he knows what Casuistry is that he can answer by indicating the Casuistry—'in such a way has he used Casuistry'—and 'it is this form of Casuistry that he has used'; and it is this indicating of Casuistry to the umpires that is meant by its being 'easily made use of.'

Thus then, it has been shown that *Doubt* and the other Categories, even though included in the first two Categories of '*Pramāņa*' and '*Pramēya*', have yet been separately enunciated, for the purpose of indicating the subjects dealt with by the Science.

# IV. BHIŞYA.

# (P. 7. U. 4-8.)

[Recapitulation of the Introductory Sūļra—Importance of the Shāsţra.]

The aforesaid Science of Reasoning, dealing as it does with the Means of Right Cognition and the other Categories,---

'is the lamp of all Sciences; it being the sheet-anchor (Means of the Knowledge) of all things; it is the support of all Sciences (being the source of all activity inspired by them), and as such it has been expounded at the very outset (of all scientific investigation)'.

As regards the 'knowledge of truth' and 'attainment of good' (spoken of in the Sütra), it must be borne in mind that there is such 'knowledge' and such 'attainment' dealt with in (and pertaining specifically to) each of the four Sciences (or branches of knowledge), in its own peculiar manner. In the Science we are dealing with here the Science of the Soul (Logic-Metaphysics), what forms the 'knowledge of truth,' is the knowledge of the Soul and the other objects of cognition ; and the 'attainment of good' is the obtaining of Release.

(END OF BHASYA ON SU. 1).

IV. VIRTIKA.

[P. 22, l. 17 to P. 24, l. 8.]

Says the Bhāşya—'The aforesaid Science of Reasoning, dealing as it does with 'Pramāņa' and the other categories, is the lamp of all sciences ;—it is the 'lamp,' because it manifests, or makes known, things ; that is to say, all other Sciences deal with things that have been made known by Pramāņa &c. (which form the subject-matter of the Science of Reasoning).

"Are there no *Pramāņa* &c. (dealt with) in the other Sciences ?" No, they are not. "Why not ?" Because those other Sciences are not meant to deal with those subjects; that is to say, they have not been propounded for the purpose of explaining *Pramāņa* &c.; and yet they deal with things that have been made known by means of Pramāņa &c. [Thus not dealing with the *Pramāņas* themselves, and yet dealing with things made known by means of these, the other Sciences are dependent upon the Science of Reasoning, which alone makes it its business to explain *Pramāņa* &c.]

The Bhāşya next speaks of the Science of Reasoning as the 'upāya' (sheet-anchor) of all 'karman' (that which is made kriyafē yaf, i.e. things); it is called the 'sheet-anchor' because (in the other Sciences) there is karaņa or explanation of only such things as have been manifested or elucidated (by the Science of Reasoning); as a matter of fact, it is only things elucidated by the Science of Reasoning that the other Sciences make (their subject).<sup>•</sup>

.

<sup>•</sup> All other Sciences, in their Explanations and Expositions, only make affirmations or denials in regard to Substances, Qualities and Actions, as leading to desirable or undesirable results; and thereby urge men to activity; and all these three—Subs tances, Qualities and Actions—are elucidated in the Science of Reasoning only.

The Bhāşya next speaks of the Science of Reasoning as the 'āshraya' (support) of all *dharma*; being of great help to all the Sciences, this Science is spoken of as their 'support'; helping the other Sciences, it is their support, just as the King is of his servant.\*

As regards the 'knowledge of truth' and the 'attainment of good', it must be borne in mind that there is such 'knowledge' and such 'attainment' dealt with in each of the four Sciences,-says the Bhaeva: that is to say, in each of the Sciences, there is 'knowledge of truth' and 'attainment of good' dealt with in its own peculiar manner. "What is the 'knowledge of truth' and 'attainment of good' dealt with in the Science of the Vedic In this Science, the 'knowledge of truth' consists Trinity ?" in the knowledge of such things as the following :--- the proper method of obtaining materials for the Agnihotra and other sacrifices, the circumstances that make these materials unfit for use in sacrifices (e.g. their being touched by dogs or cats, &c.); and the 'attainment of good' is in the shape of attaining Heaven; as it is this latter that is mentioned, in the Vēdas, as the result. "What is the 'knowledge of truth' and 'attainment of good' in the Science of Agricul-The 'knowledge of truth' in this case is the knowture ?" ledge of the soil,-i.e. the knowledge of the soil as free from such undesirable things as thorns and the like ; and the 'attainment of good' is the successful harvest, which is the result of agricultural operations. "In the Science of Politics. what is the 'knowledge of truth' and 'attainment of good'?' The ' knowledge of truth' in this case consists in knowing the proper use of the various measures or arts of Conciliation, Gifts,

<sup>• &#</sup>x27;Dharma' here stands for 'activity' which, being the end of all Sciences, is regarded as their 'dharma'. Hence the *Tätparya* takes the clause to mean that the Science of Reasoning is the basis or support of all activity. But the Värtika speaks of it as the support of the Sciences themselves; because it is the basis of all activity, which in its turn, is dependent upon all the other Sciences —as the Parishuddhi remarks. Hence what the Bhäş ya means is that the Science of Reasoning supports or helps the other Sciences when these latter lead men to activity.

Punishment and Sowing Dissension, at the right time and place, and in due accordance with one's own powers; and the 'attainment of good' is in the form of winning kingdom (over the Earth).

In the Science we are dealing with here,—i.e. the Science of the Soul—what forms the 'knowledge of truth' is the knowledge of the Soul and the other objects of cognition, and the 'attainment of good' is the obtaining of Release,—says the Bhāṣya. In connection with this some peoplé have held that the 'good' meant here cannot be that which proceeds from the true knowledge of Pramāṇa and the other categories; because the knowledge of all the categories mentioned after Discussion \* is such that it is the cause of pride and arrogance; and certairly the knowledge of these could not have any connection with the 'highest good'; and it cannot accomplish that with which it has n<sub>2</sub> connection; consequently it has to be concluded that it is not right to assert (as has been declared in Sū. 1) that 'the attainment of the highest good results from the true knowledge of

Var. Page 24.

Pramana and the other categories.' This

contention is not right; you put forward this objection, simply because you have not grasped the real meaning of the Sätra. Who explains the Sütra to mean that the attainment of the Highest Good results directly from the true knowledge of Pramäna and the rest? In fact we are going to point out in the next Sütra what those things are the true knowledge of which brings about the Highest Good; in fact it has been declared that the Highest Good proceeds from the knowledge of the Soul and certain other 'objects of cognition.' Then again, it 'has been asserted by the objector that the knowledge of the Categories mentioned after *Discussion* is the cause of pride and arrogance; this also is not true; because as a matter of fact, we find that pride and arrogance are present also when the knowledge of those Categories is

<sup>•</sup> According to the Tdf. the compound 'vddadi' does not include 'Väda' itself ; as pure Discussion, being held between the teacher and his pupil, cannot give rise to 'pride and arrogan ce

VÄRTIKA 1-1-1

absent, and they are absent also when this knowledge is present;<sup>\*</sup> for instance, the impertinent servant (being a low menial) has no knowledge of the Categories in question; and yet he has pride and arrogance; and conversely, even though the truthknowing philosopher has the knowledge of the Categories, he is entirely free from pride and arrogance [which shows that there can be no causal relation between 'pride and urrogance' and the 'knowledge' of the Categories mentioned after Discussion.]

END OF SUTRA (1).

#### V.

Sutra (2). Introductory Bhaşya. [P. 7, U. 9-10.]

Question.—" Does the Highest Good appear immediately after ' true knowledge ' ?"

Answer.-No; after 'true knowledge'

There is a cessation of each member of the following series— Pain, Birth, Activity, Defect and Wrong Notion—the cessation of that which follows bringing the unnihilation of that which precedes it; and this ultimately leads to Final Release. —(Sufra 2).

• The Süţra does not mean that the knowledge of all the Categories enumerated is the *direct* cause of the attainment of Highest Good ; what it means is that the knowledge of these is conducive to that end,—the knowledge of some of them, for <sup>i</sup>nstance that of the 'objects of cognition,' Soul, &c., leading to it *directly*, while that *Premdya*, *Doubt* and the rest being conducive to it *indirectly*. As regards Disputation and Wrangling, the discomforture of the opponent is not their sole end; it is only an intervening process in the larger process that ultimately leads to the Highest Good.

# INTRODUCTORY VARTIKA.\*

[Pp. 24-25, l. 3.]

[In the Bhasya, the Opponent is made to raise the question-"Does the Highest Good appear immediately after 'true knowledge'?" The Vartika proceeds to explain the import of this question.] "Final Release cannot proceed from true knowledge; because in whatever way you look at the matter, there are insuperable objections; for instance, if Final Release appeared immediately after true knowledge. then no further existence would be possible for those who would attain it (i.e., true knowledge and Final Release; as the attainment of Final Release would mean their immediate death): and yet as a matter of fact, we do find such men living (as have acquired the true knowledge of things): that such men do continue to exist after the attainment of true knowledge is proved by the continuity of scientific tradition.-such 'tradition' consisting in the handing down. in unbroken succession, from times immemorial; if Final Release (and death) were to follow immediately after the attainment of true knowledge, then the line of scientific tradition would cease at that point (there being no one to hand down the knowledge to the next generation); because as soon as a person would attain true knowledge (and would thus be fit for transmitting it to his pupil) he would become released, (i.e. would cease to exist). If (in order to avoid this contingency) it be held that the person who has attained true knowledge does continue to exist, then 'true knowledge' cannot be regarded as the cause of Final Release; because the Release (which means cessution of existence) would not be present when the knowledge is present; and there must be something else on account of whose absence, the Release

<sup>•</sup> The first Sütra has declared the purpose of the Science to be the attainment of Final Release. The Second Sütra proceeds to discuss what connection this Final Release has with the knowledge of things dealt with by the Science.

does not appear, even though the knowledge is present (and it would be that something which would be the real cause of the Kelease); because the real cause of a thing is that, at whose presence that thing is present, and at whose absence it is absent [and this concomitance is not found to subsist between true knowledge and Release]. Then again, if Release were to appear immediately after true knowledge, the Science itself would in every case (i.e., with each and every man who would know it) be something entirely new. not previously known by any one else [and there would be no tradition to corroborate it]; that is to say, in this case all scientific treatises would be mere 'castles in the air,' put forward by irresponsible persons (not equipped with the requisite knowledge); and they would be totally devoid of any trustworthy sponsor in the person of a man fully equipped with the requisite and true knowledge." [Thus then, whether we hold the view that Release appears immediately after true knowledge, or that it does not so appear, in either case there are insuperable objections]."

• There is no force in the above objection; because of the Highest Good (Final Release) there are two kinds—one higher and the other lower; and it is the lower kind of Release that appears immediately after true knowledge [and this Release does not imply death]; it is with reference to

<sup>•</sup> When the man attains true knowledge, he becomes free from all defects; whereupon he has recourse to no further activity; thus he creates no further 'karma' for himself; this is called *Release*, inasmuch he has does not forge any fetters for himself, for the future; this *Release* thus comes immediately after true knowledge; and is called 'lower' because the man has to continue to live, for the expiating of all his past 'karma.' It is the wise man who is in this condition that becomes the propounder of Sciences; and these therefore are not mere 'castles in the air.' On the other hand, when, by Yogic processes, the man draws upon himself all his past 'Larma' and goes through the resultant experiences at once, thereby exhausting all his past *Karma*,—and by virtue of true knowledge not creating any further *karma* for the future,—he attains absolute Release; which is regarded as 'higher' because it is no longer necessary for the man to live in the world.

this lower Release that we have the declaration—'the man with true knowledge, while he still lives, becomes freed from [Var. Page 25.] pleasure and pain;' and it is this lower Release [following immediately after true knowledge] which becomes the cause or basis of scientific instruction [such instruction being imparted by the teacher who has attained true knowledge, and has thereby acquired the lower kind of Release]. The higher kind of Release, on the other hand, comes about gradually by degrees; and the present sūtra indicates in due succession the several degrees involved in the process.

### VI.

### Explanation of Sūţra (2).

## Внаяча.

# [P. 7, l. 13 to P. 9, l. 9.]

[A.] Of 'Wrong Notion' (mentioned in the Sutra as the first to cease after the attainment of true knowledge), there are various kinds, pertaining as it does to the several objects of cognition, beginning with 'Soul' and ending with 'Final Release.' (a) With reference to the Soul, the 'Wrong Notion' is in the form 'there is no such thing as Soul'; -(b) with regard to the Not-Soul, people have 'Wrong Notion ' when it is regarded as the 'Soul';--(c) when pain is regarded as pleasure, we have the 'Wrong Notion' of pain; and so on; (d) when the non-eternal is regarded as eternal; (e) when non-safety is regarded as safety; (f) when the fearful is regarded as free from fear; -(g) when the disgusting is regarded as agreeable; -(h) when that which deserves to be rejected is regarded as worthy of not being rejected; (i) when with regard to activity, we have such notions as 'there is no such thing as Karma, nor any result of Karma'; (j) when with regard to Defects we have the notion that metempsychosis is not due to 'defects';—(k) with regard to Death and Birth (i.e., Transmigration) we have such wrong notions as—'there is no such thing as an animal or a living being, or a being or soul, who could die, or, having died, could Bus. Page 8. be born again,' 'the transmigration of living beings is without cause,' 'the cessation of birth is without cause,' 'Transmigration has beginning, but no end,' even though caused. Transmigration is not caused by Karma, Transmigration can have no relation to the soul, it consists only in the disruption (at death) and restoration (at rebirth) of the continuous connection of such things as the body, the sense-organs, the intellect and the sensations ';--(l) with regard to Final Release we have such wrong notions as 'it is something terrible, involving as it does the cessation of all activity,' 'in Final Release which consists in separation from all things, we lose much that is desirable,' ' how can any intelligent person have any longing for Final Release, in which there is neither pleasure nor pain, nor any concicusness (or sensation) at all?

(B.) From the above-described Wrong Notion proceeds attachment to the agreeable and aversion for the disagreeable; and under the influence of this attachment and aversion, there appear the *Defects*,—such as untruthfulness, jealousy, deceit, avarice and the like.

(C.) Urged by these Defects, when the man acts, he commits such misdeeds as,-(a) killing, stealing, illicit intercourse, and such other acts pertaining to the body; (b) lying, rude talking and incoherent babbling, these pertaining to speech; (c) malice, desire for things bel nging to others, and atheism, these pertaining to the mind; such misdeeds constitute the Wrong or Sinful Activity which tends to Adharma (Vice, demerit). The right sort of Activity consists in the following actions—(a) with the body, charity, supporting and service; (b) with speech, telling the truth, saying what is beneficial and agreeable, studying the Veda; (c) with the mind, mercy, entertaining no desire for the belongings of other people, and faith ; this right Activity tends to Dharma (virtue, merit). What are meant by 'activity' ('pravriffi') in this connection (in the sutra) are the results of activity, in the form of Merit and Demerit; just as life, being the result of food, we speak of the life of living beings as 'food.'

(D.) The 'Activity' described above (in the form of Merit and Demerit) becomes the cause of disreputable and and respectable *birth* (respectively); and *Birth* consists in the collective appearance (in one congregated group) of the body, the Sense-organs and the Intellect (*Buddhi*).

(E) When there is *birth*, there is *Pain*; it is that which is felt as disagreeable, and is also known by such names as '*bādhanā*' (harrassment),  $p\bar{i}d\bar{a}$  (suffering) and ' $f\bar{a}pa$ ' (affliction).

The above five qualities (or principles), beginning with Wrong Notion and ending with  $Pain,^*$  when functioning contiguously (without break) constitute Metempsychosis.

When 'true knowledge' is attained, 'wrong notions' disappear; on the disappearance of 'wrong notions' the 'defect: 'disappear; the disappearance of 'defects' is followed by the disappearance of 'activity' (merit and demerit); when there is no activity there is no 'birth;' on the cessation of birth there is cessation of 'pain;' and the cessation of pain is followed by Final Release, which is the 'highest good'.

What is 'true knowledge' is explained by the contrary of the 'wrong notion' indicated above. For instance, (a) the 'true knowledge' with regard to the Soul is in the form 'there is such a thing as Soul;'--(b) That with regard to the 'not-Soul' is in the form 'the not-soul is not the Soul;'-similarly with regard to (c) pain, (d) the eternal, (e) safety, (f) the fearful, (g) the disgusting, and (h) the rejectable, we have 'true knowledge' when each is known in its real character;--(i) with regard to activity it is in the form 'there is such a thing as karma, and it is effective in bringing about results; (j) with regard to defects it is in the form Bhi. Page 9. 'metempsychosis is due to defects;'--(k) with regard to transmigration it is in the form 'there

is such a thing as an animal, a living being, a being, a soul which, having died, is reborn,—birth has a definite cause, the cessation of birth has a definite cause,—transmigration is without beginning, but ends in Final Release,—transmigration, having a cause, is caused by activity (merit and

• The order of these as given in the Safra has been altered here. (See Faryika below).

demerit),—transmigration is connected with the soul and operates through disruption and restoration of the continuous connection of such things as the body, the senseorgans, the intellect and the sensations; '—(l) with regard to Final Release, it is in the form 'Final Release, involving separation from all things and cessation from all activity, is extremely peaceful,—much that is painful, frightful and sinful disappears on Final Release,—and how can any intelligent person fail to have a longing for it, being, as it is, free from all pain and, entirely devoid of all consciousness of pain ? Final Release must be free not only from *pain*, but from *pleasure* also; because all pleasure is invariably connected with some pain, and as such should be avoided, in the same manner as food mixed with honey and poison is avoided.

#### VI.

### Vārtika.

# [P. 25, l. 6 to P. 28, l. 16.]

The present Suira serves the useful purpose of pointing out the connection that the Science has with the Highest Good. We next proceed to explain the meaning of the words contained in the Sūtra. The objects to be known are the 'objects of cognition ' mentioned in Sutra 1.1.9, beginning with 'Soul' and ending with 'Final Release '; and with reference to these there are various kinds of Wrong "What is the exact mean-Notion-says the Bhasua. ing of the word variate (are) as used by the Bhaeya in this It means that Wrong Notion has these passage ?" things for its object. The diversity of Wrong Notion is as follows :---(a) with regard to the Soul it is in the form ' the Soul does not exist'; as a matter of fact, by the force of reasoning and the Means of Right Cognition the Soul having been cognised as something existing, the notion that it does

not exist must be regarded as Wrong Notion. An objection is raised-" No such wrong Notion is possible; for the simple reason that there is no similarity between the existent and the non-existent."\* This objection is not right ; because it is possible for those to be amenable to (cognisable by) the ' means of cognition '; the objection means that, inasmuch as the existent and the non-existent have no sort of similarity, there is nothing common between the existent Soul and the non-existent by virtue of which the character of the non-existent could be attributed to the Soul; and for this reason there can be no such wrong cognition as that the Soul does not exist. As a matter of fact however, we find that both the existent and the non-existent are amenable to the Pramanas; and this forms a basis of similarity between them ; the dissimilarity or difference between them consisting in the fact that while the existent has actions and properties, the non-existent is devoid of these; it is these characters of the non-existent (viz: being devoid of actions and properties) which one attributes to the Soul, and thereby comes to have the Wrong Notion that the Soul is non-existent.

Downloaded from https://www.holybooks.com

<sup>•</sup> All misconception is passed upon some sort of similarity between the thing and that which it is mistaken for ; the existent and the Non-existent being contradictories, no sort of similarity is possible between them ; and hence the one cannot be mistaken for the other.

en of as 'I' so is the Body also. "How can the Body be spoken of as I?" For the simple reason that the word 'I' is actually found to be used in the same case as, and co-ordinated with, words signifying the body; as for instance, we meet with such assertions as 'I am fair', where what is 'fair' is the *body*;—though herein lies the point of similarity, the difference between the two lies in this that it is only the Soul, and not the Body &c., which is the receptacle

Vart Page 26. of Desire &c.; all this we shall explain later on. It is these qualities of the Soul.

Desire and the rest, which one attributes of the Body &c., and thereby comes to have the wrong notion 'I am the Body'. Thus then, we find that in all cases, Wrong Notion appears when we attribute to a thing characters entirely different from the common and uncommon properties that it is known to possess. "What is Wrong Notion?" It is the cognition of a thing as something else (which in reality it is not). The Wrong Notions with regard to the other 'objects of cognition ' have been described in the Bhāṣya."

The five principles, beginning with Pain and ending with Wrong Notion †, when functioning without break, constitute Metempsychosis, says the Bhāsya, ;—with regard to this a question is raised :— "What is Metempsychosis?" ‡ Me-

• Wrong Notions with regard to the Sense-organs, Objects, Intellect and Mind have been exemplified in the Bhāṣya, in connection with pain, non-eternal &c. &c. down to that which deserves to be rejected, i. e. from (c) to (1); The rest of the 'objects of cognition' are mentioned by their own names.

† The Bhāşya speaks of ' beginning with Wrong Notion and ending with Pain' —while the Vārţika has reversed the order. On this the Tātparya remarks that the Bhāsya has reversed the order of the Sūţra, and the Vārţika has again reversed that of the Bhāşya,—and all this uncertainty of the order has been intentionally adopted, in order to show that there is mutual causal relation among the principles enumerated; for instance, Pain &c. are due to Wrong Notion; and Wrong Notion is again due to Pain &c.; and thus either the one or the other may be put first; this mutual causal relation being eternal.

‡ The sense of the objector is thus explained in the Titparya-' If Pain &c. constitute Metempsychosis, then why should the Sütra enumerating the objects of tempsychosis, we answer, consists in the mutual causal operation among Pain and the rest; • and this operation is without beginning; there being no restriction as to which appears before and which after the other; that is to say, we cannot say either that Pain &c. must always precede Wrong Notion, or that Wrong Notion must always precede Pain and the rest.

Says the Bhasya-When true knowledge is attained Wrong Notions disappear'. Question-"Why should they disappear ? " Answer-Because there is opposition or contradiction between True Knowledge and Wrong Notion when pertaining to the some object; that is to say, whenever True Knowledge or Right Notion appears with reference to any object, it directly contradicts the Wrong Notion of that object; for the simple reason that one and the same object cannot have two mutually contradictory characters; and it is for this reason that whenever there is True Knowledge of an object, it directly sets aside the Wrong Notion of that object. **Objection : "How** is it that the Wrong Notion, which appears first, is set aside by True Knowledge which appears later?" This is due to the fact that Wrong Notion is entirely devoid of any support; having nothing to support it, Wrong Notion is set aside; as for True Knowledge on the other hand, it has the support of "How so?" (1) Because True Knowledge is the object. in consonance with the real character of the object : that is to

Cognition mention 'Transmigration', which is only another name for 'Metempsychosis', as apart from Pain and the rest ?'

• Pain &c. do not constitute Metempsychosis; it consists in the mutual causal operation among then ; that is to say, when they tend to bring into existence one another, we have what is called Metempsychosis. Without Birth, no Wrong Notion is possible; hence Birth is the cause of this latter. Similarly without Activity (Merit-Demerit) there is no Birth ; and Activity is the cause of Birth ; Defects also become the cause of Birth, as it is they that tend to Activity. Conversely Defects proceed from Wrong Notion, Activity from Defects, Birth from Activity, and Pain from Birth. The process of this mutual causal operation being beginningless, the theory is not open to the charge of ' mutual dependence.'

Downloaded from https://www.holybooks.com

say, the object cognised actually exists in the form in which it is apprehended by the True Knowledge (and therefore it supports this latter) ;---and (2) because True Knowledge has the help (or countenance) of definite Means of Right Cognition; that is to say, Verbal Testimony and such other Means of Right Cognition lend their countenance to True Knowledge; as a matter of fact, we find that when, by the combined aid of Verbal Testimony and Inference,\* one forms the with his well-collected and concentrated mind contemplates it,-his contemplation having become fully developed,-i. e. his contemplative meditation of the object having become clear and distinct,-he obtains the direct perceptional cognition of the real character of the object; and thus in this case the True Knowledge has for its object something that has been cognised by means of Verbal Testimony, Inference and Sense-perception (and thus True Knowledge is found to be aided by the regular Means of Right Cognition), and it is by reason of this True Knowledge (thus attained) that the Wrong

Var. Page 27. Notion with regard to that object becomes set aside. The Wrong Notion of an object, being thus set aside, never appears again; because of its opposition to True Knowledge, as we have pointed out above. "Wherein does this opposition lie?" It lies in the fact that the two can never coexist. [When there is True Knowledge, Wrong Notion cannot be there.]

<sup>•</sup> The sense of this passage is as follows—First of all we come to know of the object—the Soul for instance—by verbal testimony, through the scriptures. Secondly our conception of the object becomes strengthened and further defined by means of inferental Reasoning. Thirdly by due contemplation and concentrated meditation upon the object, we come to acquire the direct cognition of the object; this direct cognition being of the nature of Perception, being throughly well-defined. It is only after all these three stages have been passed that we get at the *True knowledge* of the object. This True Knowledge has been taken as a typical instance of such knowledge having the effective support of all the three Means of Right Cognition.

On the disappearance of Wrong Notion, Passion and such other Defects disappear, because of the causal relation between them; "Wrong Notion" is the cause of Passion &c.; and without the cause, the effect cannot appear. An objection is raised-" As regards the Passion &c., that have not yet appeared, it is possible that they may not appear, on account of the disappearance of their cause; but how can the disappearance of Wrong Notion bring about the cessation of the Passion &c. that have already appeared ?" These latter also disappear by the force of Dispassion. "What is Dispassion ? " Dispassion has been defined as non-attachment to pleasure; and non-attachment must set aside attachment (and Passion &c. are only forms of attachment.) "In what manner does this Dispassion come about ?" It is brought about by the recognition of discrepancies (or undesirable features ) in the objects (that afford pleasure, )this recognition proceeding from the True Knowledge (of things).

On the disappearance of Defects, Activity ceases; that is so say, when in the case of the man who has attained True Knowledge, the Defects have disappeared, then, on the cessation of Defects, all Activity ceases. "What do you mean by this Activity?" By Activity here are meant Merit and Demerit,—these being the cause of Birth; by the word 'activity '(Pravriffi') in the Sūţra is not meant action, but Merit and Demerit, as it is these latter that have the character of the cause; as a matter of fact, it is Merit and Demerit, and not action, which form the cause of Birth; because all action is momentary and as such could not be the cause of birth (which comes about long after the action has ceased to exist.) The word 'activity' implies Merit and Demerit, by virtue of these latter being the direct results of Activity.

"As regards the Merit and Demerit that have not yet come into existence, it is only right that these should not

appear after the Defects have disappeared; but that could not be the case with the Merit and Demerit that are already in existence: because these are present in men who are entirely free from Defects; as a matter of fact we often find that the man who is entirely free from Defects continues to live and to experience the fruits of Merit and Demerit." This objection has no force, we reply; because what has been declared here (as to the cessation of Merit and Demerit) is only with reference to such Merit and Demerit as have not yet come into existence (which are yet in the future); the cause (in the shape of Defects) that could bring them into existence having disappeared; what we mean is, not that the Merit and Demerit already existing in the present cease to be on the disappearance of Defects,-but that all future Merit and Demerit cease to appear, because of the disappearance of their cause (in the shape of the Defects). As regards the Merit and Demerit that are already in existence, these cease only by the exhaustion of their effects; that is to say, all Merit and Demerit are conducive to some sort of results: and when all the results have been brought about, the Merit and Demerit, to which those results are due, cease forthwith.

The cessation of *Merit and Demerit* leads to the cessation of *Birth*. Here also what is meant is that all future Merit and Demerit of the individual having become impossible, there is no further body for him (in any future birth); and it is not meant that his *present* body ceases to exist. "In what manner then does the present body cease?" By

Var. Page 28. the exhaustion of Faculties, we reply; that is to say, what keeps the body in existence is the Faculty, called by the name of 'Merit and Demerit'; \* and so long as this Faculty lasts, the body continues to exist

<sup>•</sup> The 'merit and demerit' of the present is what is here meant. The exhaustion of this puts an end to the present body ; and there being no future Merit and Demerit, there is no more body.

[and when this Faculty has become exhausted on all its results having been brought about, the body drops off.]

When there is no *Birth* there is no *Pain*; for the simple reason that there can be no pain without a body; until there is a subsratum or receptacle for it (in the shape of the body) no pain can appear; this is what has been thus declared by Vedic writers—'So long as there are Merit and Demerit in the Soul, there are also his life, body, sense-organs, and objects (of experience).'

A man is said to be 'free' or 'released' only when he has become free from every one of the group consisting of Wrong Notion and the rest (enumerated in the Sūțra).

What is 'true knwoledge' is explained by the contrary of the 'Wrong Notion' indicated above,—says the Bhāşya. 'True Knowledge' in its comprehensive form (apart from, and including, all the several notions cited in the Bhāşya) consists in the cognition of things as they really exist.

An objection is raised (against the view that a man is released' only when he is free from all pain as well as pleasure) :-- "Why is it that the man who is renouncing (the undesirable factors of Wrong Notion, &c.) renounces pain as well as pleasure,---and does not renounce the pain only, and retain the pleasure?" The reason is that it is not possible to exercise any discrimination at the time of renouncing; we cannot renounce pain after having duly discriminated it from pleasure; consequently, when one seeks pleasure, he must experience pain also along with it; and (conversely) when one renounces pain, he must renounce pleasure also along with This is what the Bhasya means when it says-all pleait. sure is invariably connected with some pain, and as such should be avoided. By 'connection,' here is meant either-(a) invariable concomitance, the one being present wherever the other is present; -(b) or that both have the same causes,

the causes (in the shape of the Body, Sense-organ, &c.) of pain being the same as those of pleasure;—or (c) that both have the same substratum; pain subsisting in the same substratum (the body) in which pleasure subsists;—or (d) that both are experienced by the same agency; pain being experienced by the same agency as that by which pleasure is experienced (*i.e.*, by the agency of the Mind).<sup>•</sup>

END OF SUTBA (2).

END OF LECTUBE (1).

LECTURE (2).

Definition of Pramanas.

INTEODUCTION TO SUTEA (3).

[Necessity of Further Enquiry.]

BHISYA.

[P. 9, l. 9. to P. 9, l. 14.]

\* The Science of Reasoning proceeds by three processes, — by enunciation, by definition and by examination. Enunciation is the mere mention by name of the categories; Definition consists in that character or property which serves to

• According to the *Tātparya*, there are some more words here—' *Yāţraikan fāţrēţaradsţi vā*,' which the commentary explains to mean that the one is found to appear on the appearance of the same causes of cognition as the other. This reading however is not satisfactory,—(1) because the words in question have already appeared above (11. 11-12), and the idea now sought to be conveyed by means of these words is already contained in (b) above.

<sup>6</sup> We have explained in what manner the true knowledge of Pramāņa, &c., is related to the Highest Good. After this the following thought might occur to the enquirer- 'Everyone understands what *Pramāņa* and the rest mean; and this knowledge would be enough to dispel ignorance and bring Final Release; what then is the necessity of proceeding with this treatise any further?' It is in anticipation of this feeling that the Bhäşya adds this Introduction; the sense of which is that the mere mention of the categories cannot suffice for true knowledge; for which correct definition and thorough investigation are necessary.

I.

differentiate that which has been enunciated; and *Examina*tion is the investigation, by means of argumentation, of the question as to whether or not the definition is applicable to the thing defined.

• In some cases, the definition is stated after the thing has been enunciated and classified, -e.g., in the case of 'Pramāņa' and 'Pramāya'; while in other cases, the classification is mentioned after the thing has been enunciated and defined; e.g., in the case of the Perverse Reasoning we find the classification in Satra 1-2-11, while the enunciation and definition are given in Sūtra 1-2-10. In the following Satra we have the classification or enumeration of Pramāņas, which have been enunciated Sūtra 1.†

### VĀRŢIKA.

[P. 28, l. 16 to P. 29, l. 6.]

I

Says the Bhāşya—The Science of Reasoning proceeds by three processes—by enunciation, by definition and by examination Upon this, the question is put—"Whence this three-foldness of the procedure?" It is due to the peculiar character of the end or purpose of the Science; that is to say, it is not the mere wish of the speaker that he imposes

† This enumeration being a form of 'Enunciation,' the three-foldness of the Scientific process is not villated.

<sup>•</sup> It having been declared that Sūţra 3 contains the classification of Pramāņas, it might be asked why we have this classification before we have been told what Pramāņa is; i.e., before Pramīņa has been defined. In anticipation of this the Bhāşya proceeds to explain that it is by no means necessary that in every case a regular definition must precede the classification; in some cases we have the definition of a thing after it has been classifie l; while in others definition precedes classification. As regards this particular Sūţra, it may be noted that while really propounding the classification of Pramāņas, it also implies the definition of Pramāņa; inasmuch as the word 'pramāņāni' in the Sūţra serves the purpose of indicating the characteristic features of Pramāņas; and definition is nothing more than the indication of such features.

the three-fold character upon things, saying to them ' be ye so '; on the other hand, the peculiar character of the end of the Science itself is such that it proceeds by the three processes. 'Enunciation' is the mere mention by name of the categories—says the Bhāşya. Against this an objection is raised:—"This is not right; because this is contrary to what is done in Sūtra 1. 1. 12; that is to say, in Sūtra 1. 1. 12,—which reads 'the Olfactory, the Gustatory, the Visual, the Tactile and the Auditory are the Sense-organs,'—we have the definition of 'Sense-organ'; and yet it is nothing more than a mere mention of the names Var Page 29.] (of Sense-organs) [which according to the Bhāgya should make the Sūfra an enun-

ciution, and not a definition, as it is regarded to be ]."

This objection is not applicable, we reply ; because of the word 'mere' (m7/ra) in the passage in question; that is to say, the Bhasya defines enunciation as ' the mere mention of the names'; while the Sulra quoted does not contain the mara mention of names; inasmuch as the words | ' ghranat, olfactory, and the rest | are not mere nouns (denotative of things by themselves), but they are denotative of certain active relations [i. e., the word 'ghrana' denotes not merely the nose as such, but the nose as the instrument by which odour is sensed, smelt\* |; consequently, the assertion of the Bhasua is not open to the above objection. The enumeration or classification of things enunciated proceeds in two wavs :- in some cases it is classified a/ter being defined. while in others it is classified before being defined ; for instance, in the case of Perverse Reasoning we find that it has been classified before being defined; while Pramana and the rest are defined before being classified.

<sup>• &#</sup>x27;Ghrāņa' being explained as *jigkraţi an3na* the 'smelling instrument', ceases to be a mere name, and becomes expressive of the differentiating character of the organ and thus constitutes its definition.

The following Süfra is for the purpose of classifying the Pramänas which have been enunciated in Süfra 1.

II

#### Preliminary Survey of the Pramanas.

# SUTRA (3).

Perception, Inference, Analogy and Word are the Pramanas. (3)

## II.

#### Внаяча.

## [Page 10, l. 2 to page 11, l. 8]

(A) Perception consists in the functioning or action<sup>•</sup> of each sense-organ upon a particular object; this 'action' being in the form either of contact or of cognition; when it is in the form of contact then the 'result' is in the form of cognition or right knowledge; and when the 'action' is in the form of cognition, the 'result' is in the form of the idea of the thing being discarded or elected or treated with indifference (disregarded).<sup>†</sup>

(B) Inference consists in the after-cognition, of the object-probandum-possessed of the 'indicative feature,' obtained through the agency of this indicative feature duly recognised. †

<sup>•</sup> In every cause that property of it which is the immediate precursor of the effect, is called its 'action'; e. g., when the yarns bring into existence the cloth, the 'action' consists in the final conjunction of the yarns. In the case in question, when the sense-organs bring about Right Cognition, their 'action' would be in the form of their contact with the object cognised ; and when the result brought about by the sense-organs consists in the idea leading ultimately to the object being rejected &c., then their 'action' would be in the form of the recursor of the said ideas.

<sup>+</sup> By the epithet 'duly recognised', all fallacious reasons are excluded. The word 'artha' here stands, not for object in general, but that object which form; the probandum of the inference, that which forms the predicate of the conclusion, the Talparya explains 'artha' as -'arthyafs sadhyafs yat----that which is intended to be proved by means of the inference'. (O) Analogy<sup>\*</sup> consists in the cognition of approximation; by 'approximation ' here is meant the presence of common properties, i. e., similarity; e. g. 'as the cow so is this animal, gavaya'.

(D) Word is that by which the objects are signified, or denoted, or made known.

That the Pramanas are means of cognining things is indicated by the literal signification of the constituent factors of the name 'pramāņa'; that is to say, the word 'pramāņa', consisting as it does of the root 'mā' with the preposition 'pra' and the instrumental verbal affix 'lyut', its literal signification comes to be 'pramīyaļē anēna', 'that by the instrumentality of which things are rightly cognised'; and the names of the particular pramāņas also are similarly explained.<sup>†</sup>

Question—" Have the **Pramāņas** their objectives in common ? or is the scope of the **Pramāņas** restrictéd within mutually exclusive limits ?"

Answer-As a matter of fact, we find both ways of functioning among Pramanas. For instance, in the case of the Soul we find that ---- (a) it is by means of Word that we come to know that the Soul exists ;—(b) we find Inference operating upon it, when it is asserted that ' the indicative marks of the Soul are desire, aversion, effort, pleasure, pain and consciousness' (Sütra 1.1.10) [which means that it is from the presence of these latter that the existence of the Soul is to be inferred]; ----- and (c) the Soul is also perceived by a peculiar contact of the Soul with the mind, this perception being the result of Yogic trance, and as such possible only for the Yogin. [Thus Soul is an object which is operated upon by all the Pramanas.] Similarly in the case of fire, we find that -(a) when a trustworthy person says 'there is fire at such and such a place', we have the cognition of fire by means of Word; ----(b) drawing nearer to the place, if we happen to see smoke issuing, we inter, from this, the existence of fire ;--(c) actually getting at the place, we Bhā. Page 11. directly see the fire. On the other hand, in the case of certain things we find that one thing is amenable to

<sup>•</sup> This definition pertains to the *Means* of analogical cognition, and not to analogical cognition itself.

<sup>† &#</sup>x27;Anumana'-anum'yafé anèna ; ' Uramana '-upamiyaté anèna ; ' Shabda 'shabdyaté anèna.

only one particular **Pramāņa**; as for example, that 'the Agnihotra should be performed by one desiring heaven' we can know only by the Words of the Veda; the ordinary man of the world does not know of any indicative features of Heaven (by means of which he could have an *inferential* cognition); nor is he able to *perceive* it directly;—similarly when we hear the sound of thunder, from this, we *infer* the source of the sound; and in regard to this we can have no Perception, nor any Verbal cognition;—lastly of our own hand we, have a direct *perception*, and no *inference* or word is operative in this case.

Among the four kinds Cognition, Perception is the most predominant ; because when a man seeks the knowledge of a certain thing, if he is told of it by a trustworthy person, and thereby he has the verbul cognition of the thing, there is still a desire in his mind to ratify his information by means of inference through particular indicative features; and even after he has been able to get at the inferential knowledge of the thing, he is still desirous of actually seeing the thing with his eyes; but when he has once perceived the thing directly, his desires are at rest, and he does not seek for any other kind of knowledge\*; the examples already cited above (the cases of Soul and Fire) serve to make this point clear; for instance, when the man has to know fire, if several pramānas come to bear upon it (as shown above) there is a commingling of the Pramanas (in which case all longing for knowledge does not cease until the appearance of direct Perception); whereas if there is a single Pramāņa bearing upon the thing, there is no commingling, but separate functioning [and in this case also it is found that it is only Perception that fully satisfies the inquisitive mind.]

[HERE UNDS THE TRISUTEI-BHASYA].

<sup>•</sup> This shows that while the other Pramānas are not sufficient to allay all desire for knowledge, it is Perception alone which is self-sufficient; hence its predominance.

# II.

# VARTIKA.

# [Page 29, l. 8 to Page 32, l. 7.]

The meaning of the Safra is quite clear.

An objection is raised—" The enumeration of the enunciated (Pramānas) is distinctly damaging;\* because it involves a self-contradiction : it has been declared in the Bhāşya that 'the Science of Reasoning proceeds by three processes of enunciation, definition and examination;' if after this declaration there is enumeration of the enunciated. -inasmuch as this would not come under any of the three processes mentioned before, the employment of it in the present treatise would be distinctly improper. [As this being a fourth process, the having recourse to it will involve a contradiction of the law of 'three processes']." There is no such contradiction, we reply; as the enumeration of the enunciated is included under 'enunciation' itself. "How so?" Because of both being of the same character: Enunciation consists in the mentioning of things by their names, [and this is precisely what constitutes enumera-"What then is the use of having enumeration tion also]. at all [when it is the same as enunciation]? Enumeration. we reply, is for the purpose of specifying (what is mentioned in a general way by the enunciation); for instance, if we had no such enumeration as is contained in the present sufra-'Perception, Inference, Analogy and Word are the pramanas' -we could not obtain the specification of Pramanas as four "That the number of Pramānas is four only could only.1

<sup>‡</sup> This specification could not be got at by the mere Enunciation of Pramagas in Sügra (1).

<sup>• &#</sup>x27;Anarthakya' has been explained as 'the character of bringing about an undesirable contingency (anartha).'

<sup>+</sup> In Enumeration, we have the specific mention of each member of the object that had been mentioned in a general way, by enunciation. Thus then, both being only mentioned by name, the former is included in the latter.

be known from the fact that the author of the Sātra supplies us with definitions of only four kinds of Pramāṇa." This could not be; as all that the definition of a thing does is to distinguish it from others; it appears to be imagined that the fourfoldness of Pramāṇas could be learnt from their definitions, the Sātras supplying definitions of only four Pramāṇas. But this could never be the case; because the use of the definition lies in the differentiating of the thing defined; that is to say, all that the definition does is to differentiate the thing defined from other homogeneous and heterogeneous things; it can never serve the purpose of specifying things; its scope being entirely different; specially

Var. Page 30. [the definition cannot serve the purpose of sypecifing] because the definition of Pramāņas (as supplied by the Sūţra) could never indicate the impossibility of other Pramāņas; consequently, if the four Pramāņas were not specifically enumerated, and if we had only the definitions of the four Pramāņas, there would be a doubt in our minds as to whether other Pramāņas exist and yet they have not been defined, or that they do not exist (and hence have not been defined); and it is for the purpose of settling this doubt that both enunciation and specific enumeration become necessary.

(A) The Bhāşya has defined Perception as consisting in the action of each sense-organ upon a particular object; here the word 'pratyatsam' has been explained as an Avyayibhāva compound (not because it is such a compound, strictly speaking, but) because it is only when so taken that the word can afford the sense attached to it by the Sūtra [i.e., it is only thus that it can be made to include the action of all the sense-organs]. That the Bhāsya does not expound the compound but only explains the sense of it is proved by the fact that the form in which the compound word 'pratyaka' has been expounded here is different from the strictly grammatical form in which an *Avyayibhāva* compound should be expounded; and this must be due to the fact that what the *Bhāşya* means to state is only the fact indicated by the compound word, and not to expound the compound in its strictly grammatical form; the grammatical form in which the *Avyayibhāva* compound ('*praţyakşam*') should be explained would not admit of the Genitive '*akşasya*,'--[the proper form being '*akşam akşam praţi varţaţā*']. "What sort of compound then is the word *praţyakşam* (if it is not *Avyayibhāva*)?" It belongs to the compound of the '*Prādi*' class,\*--being expounded as '*praţigaţam akşam*' (pertaining to the senseorgan); this compound being similar to the compound '*upaguţ*' (possessed of cows), which is expounded as '*upagaţo gobhiţ*.'

(B) "With regard to Inference, the Bhāṣya has said that it consists in the after-cognition of the object-probandumpossessed of the indicative feature, obtained through the agency of the indicative feature duly recognised; this however is not right; because of the absence of proper results; that is to say, if Inference is defined in this manner, it becomes entirely futile; as the object (sought to be known by it) is already known."<sup>†</sup> This objection does not touch our position, we reply; firstly because an additional 'yatab' (from which) is understood in the Bhāṣya passage in question, which really defines Inference as that from which proceeds the after-cognition, &c. &c. [which definition applies,

<sup>•</sup> The word '*pratyakia*' is treated as a regular adjective, its gender varying with the gender of the noun it qualifies. This variability of gender cannot be possible in the case of the Avyay1bhāva compound, which is always Neuter.

<sup>&</sup>lt;sup>†</sup> As soon as the Inference itself becomes an accomplished entity, the object becomes duly known, in the preposition embodying the conclusion, which forms the last constituent factor of the Inference. And the object thus being known as soon as the Inference is accomplished, there is nothing left unknown, that could be known by means of the Inference after its own accomplishment. And thus the Inference becomes objectless,—futile.

not to the entire Inferential process, including the premisses as well as the conclusion, but only to the minor premiss, which states the connection between the Subject and the indicative feature or the 'middle term'; and thus in this case the after-cognition mentioned in the definition becomes the result or effect of the said Inference, which therefore ceases to be futile]; -secondly (if the above explanation be considered undesirable by reason of the necessity of supplying an additional word), we may explain the definition in the Bhāşya to mean that Inference is the cognition obtained through the 'indicative feature' (or Middle "But in this case, the Inference becomes Term). futile as pointed out above." This objection does not apply, we reply; because the 'result' of Inference in this case would be in the form of 'the idea of the object being rejected or chosen or disregarded '|as explained in connection with Perception, above]. In fact, in the case of all Pramānas, when the word 'pramāna' pertains to (or bears upon) itself, it denotes or accomplishes its own being (being regarded as an abstract noun), and is synonymous with 'pramiti' or Cognition; when however, it bears upon something else, the word denotes instrumentality,-the word 'pramāņa' in this case being explained as the means of Cognition, pramiyate anena', i. e. 'that by means of which a thing is cognised' [ and in the former case the result is in the form of the ideas of rejection &c., and in the latter case, it is in the form of the resultant cognition]. " When the word pramana is regarded as an abstract noun, what would be its result, ?--- the object having been already cognised (in the cognitive process itself)." We have already explained above that the result in that case consists in the ideas of the object being rejected or chosen or disregarded; as a matter of fact, it is only after an object has been cognised that there can be any such ideas; that is to say, it is only

after the object has been cognised that there are such ideas as 'this should be discarded,' or 'this should be chosen', or 'this should be disregarded.'

[In connection with Perception the Bhāṣya has said his 'action' (which constitutes Perception) being in the form either of contact or cognition]. On the strength of this passage some people declare that Perception consists in contact only. But this is not right; because there are no proofs for such an assertion; that is to say, there is nothing to prove that it is contact only that constitutes the Pratyakşa-pramāņ. As a matter of fact, both (Contact and Cognition mentioned in the Bhaṣya) constitute the Pratyakṣa-pramāṇa, for the simple reason that both are definitive in their action; that is to say, both Contact and Cognition are productive of definite cognitions as shown by the Bhāṣya). The view that contact alone constitutes Perception is open to many other objections also.

Vår Page 81-

(C) "The Bhosya says—Analogy consists in the cognition of approximation or similarity;

but this is not right; because Analogy has been explained as something entirely different; that is to say, Analogy has been declared to be the cognition of the connection of a thing with its name;" and yet in the Bhāsya it is stated that it consists in the cognition of similarity; thus we have a clear case of self-contradiction." There is no contradiction, we reply; because as a matter of fact, what is meant is that the cognition of the connection of a thing with its name is got at by means of the cognition of similarity; what happens in the case of all analogical cognitions is that the observer, who has seen the cow and is cognisant of its similarity (to the unknown animal), happening to see that other animal, recalls to his mind the idea that had been afforded to him by means of words (indicating the fact of the two animals

<sup>•</sup> Analogical Cognition is said to be in the form 'this animal that I see before me is called garaya.'

being similar),—and thereby coming to perceive directly the similarity in the animal before his eyes,—arrives at the cognition that gavays is the name of this animal; wherein he has the 'cognition of the connection of the thing with its name;' and thus we find that the assertion of the *Bhāṣya* involves no contradiction.  $\bullet$ 

(D) The Shabila or Word Pramāņa consists in the cognition of (the denotation of) words; and the result is to be explained as before (in the case of Inference.)†

[The Bhāsya has mentioned the Pramāņas in a definite order]. Some people have accounted for this particular order of sequence, in the following manner:-"Perception has been mentioned first, because it is the most important of all the Pramāņas; after this Inference is mentioned, because Inference is always preceded (by based upon) Perception; after Inference comes Analogy because of its similarity  $\ddagger$  to Inference; Word comes last because its scope is the vastest of all. §"

• There would have been contradiction if the definition given in the Bhdaya were intended to apply to Analogical cognition; as it is true that this latter consists in the cognition of the connection of a thing with its name. As a matter of fact however, the word 'upamäna' in the Bhdaya stands for Analogy (and not Analogical cognition) and this Analogy is the means leading to analogical cognition; and thus there is nothing wrong in the assertion that the cognition of similarity, is the upamana (s.e. the means of analogical cognition); the cognition of similarity is not the analogical cognition itself, but only the means to it; as shown in the text.

\* The *Tātparya* thus explains—'When a sentence is uttered, there arises a cognition of things denoted by the words composing that sentence; and it is this cognition of things denoted by the component words which constitutes *Shabda* or 'word' as the fourth pramāņa; when this aforesaid cognition is the pramāņa, the result consists of the knowledge of the whole sentence; but when the cognition of the meaning of the entire sentence is regarded as the pramāņa, then the result is in the form of the idea of the thing spoken of being rejected or chosen or disregarded.

<sup>‡</sup> The similarity between Inference and Analogy lies in the fact of both depending upon *remembrance* of past conceptions; the two are different because Analogy has the further character of being based upon Verbal cognition also.

§ The knowledge of an extensive field is naturally dependent upon the knowledge of lesser helds; hence the latter are mentioned first.

108

Others have objected to this explanation, declaring that the particular order has been adopted only because when a number of Pramānas had to be mentioned, it was only natural that they should be mentioned in some order, one after the other; \* such being the very nature of all verbal expression that things cannot be spoken of simultaneously; they further point out that the reason that has been put forward for Word being placed last-that "its scope is the vastest of all "-should operate quite the other way; that which has the vastest scope should have been mentioned first. This last view also cannot be accepted, we reply. It is quite true that it is the very nature of verbal expression that things should be spoken of one after the other; but though this would account for some sort of sequence in the mention of the Pramānas, it could not be the reason for adopting a definite particular order of sequence. In view of these objections it becomes necessary to point out some other reason (for the particular order in which the Pramanas are mentioned). This reason lies in this that Perception is mentioned first, because it is the most important; (as the former of the above two views has pointed out); but it is not right to say (as the second view has said) that Word is to be mentioned first because "its scope is the vastest;" because as a matter of fact. both Perception and Word have vast scope. "How Because by means of *Perception*, as well as by 80 ? " means of Word, we have the apprehension of Generalities, of Specialities, and of things possessed of these (generality and speciality). The question then + arises --- " Should then Word be mentioned first, or Perception ?" Perception, we reply. "Why so?" For the simple reason that all Pramanas are preceded by (i.e., based upon) Perception.t

<sup>•</sup> And there is no ulterior motive underlying the adoption of the particular order.

<sup>†</sup> Both being equally extensive in their scope.

<sup>&</sup>lt;sup>‡</sup> Inference and Analogy both stand in need of *Perception*; without which they are impossible. In Verbal Cognition also the auditory perception—hearing—of the word is absolutely necessary.

The Bhāşya having raised the question—" Have the Pramāņas their objectives in common? Or the scope of the Pramāņas is restricted within mutually exclusive limits?" answers it with—As a matter of fact we find both ways func-

Var. Page 32. tioning among the Pramāņas. How this is so has been shown by us in course of our explanation of the opening word of the Bhāsya—' pramānatah.'

Says the Bhāsya—Among the four kinds of Pramana, Perception is the most predominant. Perception is regarded as the most important, because when a thing has been apprehended by Perception (i.e., has been directly perceived), there is no further desire on the part of the cogniser (to have any other cognition of that thing). For example, we find that when the ordinary man is told by a trustworthy person that there is fire in a certain place he has the cognition of fire got by means of Word; being moved by a desire for further definite cognition of the fire, he proceeds to the spot indicated ; drawing near to it, he perceives the smoke, and through that he apprehends (by Inference) the Fire of which the smoke is a concomitant indicative; (not satisfied by this, and being moved by a desire for further definite cognition) he draws nearer to the place, when the fire is present before his eyes, and he obtains, through this contact of the fire with his organ of vision, the cognition (direct Perception) of fire ; and after that he has no desire for any further cognition of that fire; it is for this reason that Perception is held to be the most important of the Pramanas. We have such comparative predominance only in those cases where we have several Pramānas bearing upon the same object; in cases however, where there is no such joint operation, and the object is born upon by a single Pramana, there is no occasion for considering the comparative predominance or subservience of the **Pramānas**.

(Here ends the Trisūțri-Vārțika.)

<sup>•</sup> Vartika, Text-pp. '-5.

#### III.

## Perception Defined.

### Внаята (р. 11, l. 10).

Of the Instruments of Right Cognition enumerated above the author proceeds to supply definitions—

#### $S\bar{u}$ tra (4).

Sense-perception is that cognition—(a) which is produced by the contact of the object with the sense-organ,—(b) which is not expressible (by words)—(c) which is not erroncous,—(d) and which is well-defined.

BHASYA (p.11, l. 13 to p. 16, l. 10.)

(a) That cognition which is produced by the contact of the sense-organ with the object cognised is Sense-perception.

An objection is raised against this :---" If such is the definition of Sense-perception, then it is not right to hold (as the Logician does) that (in all Perceptions) the Soul is in contact with the Mind, the Mind with the sense-organ, and the sense-organ with the cognised object; [ because the Sutra lays down only the contact of the sense-organ with the object as the necessary condition of Perception]."

Our answer is that the declaration in this Sūtra is not meant to be an exhaustive enumeration of all the factors that enter into the cause of Sense-perception; it does not mean that what is here mentioned is the only cause of Senseperception; all that it does is to indicate that factor which pertains to Sense-perception exclusively, and which distinguishes it from all other forms of cognition; and it omits to mention the other factors (e. g. the contact of the Soul with the Mind, and so on), not because these agencies are not present in Sense-perception, but because they are common to Inference and other forms of cognition also.

"Even so, it should be necessary to mention the contact of the mind with the sense-organ [which is a factor that is present in Sense-perception only, and in no other form of cognition]."

\*The contact of the mind with the sense-organ is not mentioned in the Sūțra because when Perceptional Cognition

\*The Vartika supplies two explanations of this sontence :--(1) The Mind-organ contact is as good a distinctive feature of Perception as the organ-object contact --this is what is meant by 'samanatvat'; but the Sutra does not make it its busiis distinguished from other forms of cognition, that contact is as good a distinctive feature of it as the contact of the sense-organ with the cognised object [consequently when one has been mentioned, there is no need for the mention of other conditions, as the Sūtra is not meant to contain an exhaustive enumeration of all the distinctive features of Perception].

(b) \*[Some people have held the view that there is no such perception as is entirely free from verbal representation; this view may be briefly put as follows]:—" As many things there are, so many also are the names or words expressive of them; and through these names, the things come

ness to point out all its distinctive features ; one is quite enough to differentiate it from all other forms of cognition. The meaning of the sentence would, in this case, be as presented in the translation.

(2) The second explanation is that the Sutra mentions only the organ-object contact because this forms the distinctive feature of every individual perception ; when one perception differs from another, this difference does not consist in mind-organ contact; i.e. individual perceptions are never spoken of in terms of mind-organ contact. In this latter case it is difficult to explain the word 'samānaţvāţ', the explanation given by the Vārţika (see below) being forced. The Vārţika does not pronounce itself in favour of any one of the two interpretations; in the concluding statement (see below) it mentions both.

It is remarkable that the *Tātparya* notices the latter interpretation only.

e" Every object has a name; there is nothing that is devoid of name; this catablishes the identity of the thing with its name; whenever a thing is cognised, it is cognised, as bearing its name; the name is not the means by which the object is known; as the object—cow—when perceived is perceived as 'this is cow', where there is a distinct co-ordination between the *this* and the *cow*, both of which are in the same case; thus things being identical with their names, the perception of things must involve the perception of the name also; hence there can be no perception devoid of verbal expression"—*Tatparya*.

The translation has followed the interpretation of the *Tātparya*. This interpretation of the *Bhāşya* however appears to be a little forced; the *Tātparya* found it necessary to have recourse to it, and explain the word '*Shabda*' not as 'verbal' (its ordinary signification), but as 'accompanied by the word or name', as it could not accept the view that cognition of the thing as bearing a name—*i. e.* the *Savikalpaka* cognition—is not included under 'Sense-perception'. The reader is referred to its remarks in connection with the word '*vyavasāyāţmakam*', below.

It appears much simpler to take the *Bhåqya* as meaning that whenever the cognition of a thing ' involves its name, it cannot be regarded as *Sensuous*, being as it is *verbal*; and it is with a view to exclude such verbal cognition (which includes *Sarikalpaka* cognition also) that the Sūţra has added the epithet—'which is not expressible to be cognised as identical with, inseparable from, the words; and it is on such cognition that all usage is based; that is to say, every cognition of objects that is produced by the contact of the sense-organ with the object is in the form of ' colour,' or ' taste', and so forth; and all these words— ' colour' ' taste' and the rest—are names of objects;—by which names the cognition is expressed in such words as— ' such and such a person cognises the thing as colour', 'such and such cognises it as taste', and so on; and that which is thus expressed by means of names, must be inseparable from, always accompanied by, words; [whence it follows that there is no Sense-cognition that is free from verbal representation.]"

It is in view of the above position that the author has added the qualification that the cognition should be 'not expressible by words.' In a case where the relation of the object with a word is not known [i.e. when we do not know the name of the object that we perceive], the apprehension of the object that there is is certainly never spoken of by means of any name "; and even when the relation is known, it is known in the form that ' such is the name of the thing I perceive ' (where the two are entirely distinct, and not identical). † Even when the fact that ' such is the name of the thing ' is known, what happens is that this (notion of the name) is an additional factor superadded on to the apprehension, of the thing,—this apprehension, by itself, remaining as before (entirely independent of the idea of the name). Where the use of the name comes in, is in the communicating of the

by words'. It has to be admitted however that this explanation would militate against the accepted Logician's view that Sense-perception is of two kinds Savikalpaka and Nirvikalpaka. It is for this reason that we have adopted in the translation the interpretation of the Tatparya, which also appears to have the support of the Vartika, which latter however is not quite explicit on the point.

•The reading in the text gives no sonse; an additional 'na 'being necessary. Such is the reading adopted by the *Tātparya* and translated here.

*†The translation follows the reading of the printed text.* But the *Tātparya* reads ' *navishisyafā*', which reading is better ; the meaning of the sentence in that case would be that ----- 'Even where its name is known, the cognition of the thing itself does not differ from that cognition of it which we have where its name is not known '. The reading of the ' Pandit ' edition is ' *arthajādanana tishisyafā*.'

apprehension to others]. \*So long as there is no name or appellation or verbal expression for the cognition of the object it cannot be comprehended by others, and thereby put to any practical use, because what is not comprehended cannot serve any practical purpose (such, for instance, as being communicated to others, and otherwise made use of).

†It is for these reasons [i.e. because the thing cognised is something different from its name] that whenever the cognition of things is spoken of by means of names, these names are always accompanied by the word 'as' ('*ifi*'),—the form in which the cognition is expressed being 'the thing is cognised as colour', 'it is cognised as taste ', and so forth.

For these reasons we conclude that the name is not (necessarily present and) operative at the time that the apprehension of the thing takes place; it becomes operative (and useful) only at the time of its being spoken of, or communicated to other persons. The upshot of all this is that the apprehension of things, produced by the contact of the sense-organ with them is not verbal—i. e. it is entirely free from all verbal representation.

\$\$\frac{1}{c}\$ During the summer it often happens that the sun's rays become mixed up with the heat-rays radiated from the earth's surface; and the two together, flickering at a distance, come into contact with the eye of the observer, who apprehends them as water ; now if the definition of Sense-perception consisted of only two terms—' that which is produced by the sense-object contact ' and ' that which is not representable by words '— then the apprehension of water under the above circumstances would have to be regarded as ' Sense-perception'. With a view to guard against this contingency, the author has added the further qualification that the cognition should be not erroneous. That cognition is erroneous, in which the thing is apprehended as what it is not; while when a thing is perceived as what it is, the Perception is not erroneous.

•The sentence given in the foot-note reading is absolutely necessary; as without that the sentence in the text, standing by itself, gives no sense. The *Tātparya* also accepts the reading of the foot-note; and so does the 'Pandit' edition.

+ Here also the reading is defective; that noted in the footnote being the correct reading, accepted also by the *Tatparya*.

<sup>‡</sup> The qualification 'anybahichāri ' is necessary in the case of Perception only ; as in the case of other forms of knowledge, the erroneousness lies in the Perception upon which every one of them is, in one way or the other other, based;—says the Tatparys. (d) When the man observes from a distance, and sees (something rising from the earth), the cognition that he has is in the (doubtful) form—'this is smoke, or this is dust'; inasmuch as this doubtful cognition is also produced by the contact of the sense-organ with the object, it would have to be regarded as Sense-perception, if this were defined simply as 'that which is produced by the contact of the sense-organ with the object.' With a view to guard against this, the author has added the further qualification that the cognition should be well-defined.\*

It will not be right to urge that -"all doubtful cognition is are produced by the contact of the Soul with the Mind [and not by the contact of the sense-organ with the object]; so that the doubtful cognition would be precluded by the first word of the definition; and for the exclusion of such cognition it would not be necessary to have a further qualification ";-because as a matter of fact. it is when one sees the object with his eyes [when there is contact of the object with the eye] that he has a doubtful cognition with regard to it [in the form-' this object that I see is this smoke or dust]; then again, just as in all cases of Perception, when a man apprehends the object with his sense-organ, he perceives it also with his mind, so also when he has the doubtful cognition of a thing through his sense-organ, he has the same cognition through his mind also [which shows that in such cases the doubtful cognition, though brought about by the mind, is de-

• The Tatparya, anxious to include the savikalpaka Perception under the definition contained in the Sugra, remarks that doubtful cognition is already excluded by the qualification 'not erroneous', rs that cognition also is erroneous; consequently we must take the qualification 'well-defined ' as meant to include the Savikalpaka cognition ; so that the phrase ' not expressible by words ' applies to the Nirvikalpaka or non-determinate or abstract cognition ; and the word 'well-defined ' applies to the Savikalpaka, determinate or concrete cognition. The Tatparya justifies its interpretation by the remark that the Bhasya and Vartika have omitted to make mention of this Determinate Perception because it is too plain to need any explanation ; and that it has put forward its interpretation, according to the view taken by Trilochana Guru. According to the Bhasya and Vartika the Determinate Cognition would not be Perception, the entire definition being applicable to Non-determinate Perception only. It would seem that the Bauddha definition of Perception as Kalpandpoham-abhranțam-were a true rendering of Vațsyāyana's view. The Vārțika also when refuting the Bauddha definition, directs its attack only to the presence of the word 'Kalpanā'.

† Which shows that all doubtful cognitions are not independent of sense-operation; even though there are some that are due to the operation of the Mind alone.

Downloaded from https://www.holybooks.com

pendent upon a sense-operation]; and it is this latter kind of cognition which is brought about by the mind through the agency of the organ,-and which has this additional qualification [over the doubtful cognition, produced by the mind alone by its contact with the Soul]-which is meant to be referred to here by the name 'doubtful'; and not the former kind of doubtful cognition [montioned by the opponent, as that which is brought about by the contact of the Soul with the mind independently of the operation of the senses].\* Thus then in reality, in all cases of Sense-perception, the sensecrgan cf the perceiver is invariably operative ; and the operation of the Mind comes in only subsequently, for purposes of the representative cognition (which recalls the third cognition previously got at through the senses); that this is so is proved by the fact that there is no representative cognition for those whose Sense-organs have perished. [And just as in the case of representative cognitions which are directly due to the Mind-operation, sense-operation is necessary, so in the case of doubtful cognitions also, which are due directly to Mind-operations, the operation of the sense-organ necessary .

The Opponent raises another objection against the definition :--- "It is hecessary ", he urges, " to supply a definition of Perception that should be applicable to the † (cognition of) the Soul and (that of) pleasure, &c.; because the cognition of these is not produced by the contact of the sense-organ with the object; and hence the definition given in the Satra cannot apply to it]". Our reply is that the Mind by whose contact the cognition of the Soul, pleasure, produced] is as good a 'sense-organ' as the is åc., Eye, &c., and the reason why the Mind is mentioned in the Sutra, apart from the 'Sense-organs' enumerated (in Sū. 1. 1. 12,) lies in the fact that there are certain marked differences in the character of the Mind and the other senseorgans and not because the Mind is not a sense-organ; these differences are the following : all the other 'sense-organs'] (a) are composed of material or elemental substances, -(b)

<sup>•</sup> Thus there being many doubtful cognitions brought about by the contact of the sense-organ with the object, a further qualification was necessary for the exclusion of these.

<sup>+ &#</sup>x27;Atman' and 'sukhādi' must be taken as equivalent to 'ātmajāāna' and 'sukhādijāāna' according to what the Vārtika says. Pleasure may be produced by senseobject contact; but it cannot be called 'Perception'; it is only the cognition of the pleasure that can be called 'Perception'.

are effective upon only a few specific objects; and (c) are capable of acting as organs only as endowed with certain specific qualities (which they apprehend);-whereas the Mind is (a) immaterial, -(b) effective on all objects, -and (c) capable of acting as an organ, without being endowed with any quality. † And further, we shall show, under Sū. 1-1-16, that even when the contact of more than one sense-organ with their respective objects is present, there is no simultaneous perception of all these objects, -which is due to the fact that while there is proximity or contact of the Mind (with one object), there is no such contact of it (with the other objects); (which shows that the operation of the Mind is necessary in every act of perception |;-- and all this goes to prove that the Mind is a 'sense-organ'; and this obviates the necessity of providing another definition (of Perception, for including the perception of the Soul, &c.). Then again [even though the Satra does not mention the Mind among the 'sense-organs', the fact that the Mind is a 'sense-organ' can be learnt from another philosophical system (the Vaishesika, for instance); and it is a rule with all systems that those theories of other systems which are not directly negatived are meant to be accepted as true.1

Thus has Sense-perception been defined.

<sup>•</sup> The Eye is an organ of perception, because it is endowed with the quality of Colour which it apprehends; and so on with the Nose, the Ear, the Hand, and the Tongue.

<sup>+</sup> The Variika accepts only one of those three points of difference—viz; that the other sense-organs operate only upon certain specific objects, whereas the Mind operates on all objects.

<sup>&</sup>lt;sup>‡</sup> Dinnāga, the Buddhist Logician, has objected to this declaration, in his Pramāņasamuchchāya, remarking 'if silence was proof of assent, why did the Nyāya-Sūţra not remain silent regarding the other five Sense-organs also ?' (See S.C. Vidyābhūgaņa. Indian Logic - pp. 86-87, footnots).

## Vārțika.

## [P. 32, L. 8 to P. 45, L. 17]

The Bhāşya (p. 11, l. 10) has said—Of the Instruments of Right Cognition enumerated above, the author proceeds to supply definitions. Of these definitions, that of Perception is given in Sū. 4. This Sūţra serves the purpose of differentiating Perception from all other things, homogeneous as well as heterogeneous.\*

The question is raised—"What is the meaning of the Sūtra?"

[In answer to this question; the *Bhāsya* proceeds to explain each of the words separately].

(a) • That which is produced by the contact of the object with the sense-organ.' The sense of this is that-' that cognition is *Perception* which proceeds from, or is brought about by, the contact of the object perceived with the senseorgans (spoken of in the Sūtra) pointed out later on (in Sū. 1-1-12); and the 'objects' also will be pointed out in Sū. 1.1-14. As for 'contact,' this is of six different kinds :--viz. (1) conjunction, (2) inherence in that which is in conjunction. (3) inherence in that which inheres in that which is in conjunction, (4) inherence, (5) inherence in that which inheres, and (6) the relation of qualification. To exemplify these-When a certain thing-the jar, for instance,-is seen, the jar which is endowed with colour is the 'object', and the eye the 'sense-organ'; and in this case, the 'contact' of these two is of the form of conjunction; because both are substance (and as such capable of mutual conjunction) (1)—in the perception of the colour (of the jar) the 'contact' of the eye with the colour, which latter is not a substance, is of the naturo of inherence in that which is in conjunction; because the colour

<sup>•</sup> Perception is distinguished from Inference, &c., which, as Right Cognitions are 'homogeneous;' and it is also distinguished from Erroneous Cognition, which is 'hetrogeneous' as not belonging to the same class of 'Right Cognition'.

(which is in contact) subsists in the jar which is in conjunction with the eye,—this 'subsistence' being of the nature of inherence (2).—In the perception of the genus subsisting in the colour, the 'contact' is of the form of inherence in that which inheres in that which is in conjunction [the genus inhering in the colour, which inheres in the jar, which is in conjunction with the Eye]; similarly in the case of Per-Vār: Page 33. in university with the advenue unbetween in

is conjunction with the odorous substance,—in the odour, there is inherence of that (substance) which is in conjunction (with the organ),—in the genus subsisting in the odour, there is inherence of that (odour) which inheres in that (substance) which is in conjunction (with the organ) (3). In the case of the perception of Sound, the 'contact' is in the form of *inherence* (4) [Sound inhering in the Akāsha of the auditory organ, by which it is apprehended]. In the case of Sound, the first \* sound that is produced has its source in conjunction and disjunction.

On this point, there arises the question----" (a) Which Sound has its origin in conjunction ? (b) and which in disjunction ? "

(a) [The Sound having its origin in conjunction we find in the case of the beating of the drum; in this case] Sound being the distinctive quality of  $\bar{a}k\bar{a}sha$ , its cause must be a conjunction subsisting in  $\bar{a}k\bar{a}sha$ ;—and it is a well-known law that in the producing of qualities and actions, Conjunction cannot operate independently; it must depend on something else.—Now what is that upon which it depends? Well, as a matter of fact, Sound

<sup>&</sup>quot;" First '-- The Logician's view is that whenever sound is produced, it is produced in the first instance, in the source from which it proceeds ; this sound reproduces itself in the point of  $\overline{A}$  kasha nearest to that source ; and so on, it continues to be reproduced until it reaches the auditory organ, where it is perceived ; of this series, it is the *first* one that is produced by conjunctions and disjunctions------of the air with the vocal cords for instance,---the subsequent ones owing their origin to the sound immediately preceding it in the series.

is produced (in the case of the sound of the drum, for instance) by the conjunction of the  $\bar{a}k\bar{a}sha$  with the drum; and this conjunction is aided by (and hence is dependent upon) the conjunction of the drum with the stick (with which it is beaten); and this latter conjunction is also dependent upon the force with which the stick is struck. [From this it does not follow that Sound is produced by the conjunction of the drum with the stick; because] if the cause of Sound consisted in the conjunction of the drum and the stick (and not in that of the drum and akasha), then the cause of Sound would not be co-substrate with it, [the Sound inhering in  $\bar{a}k\bar{a}sha$ , and the conjunction causing it subsisting in the drum and stick] and if such causal operation were admitted, then it would be possible for sound to be produced anywhere and everywhere; [because the only condition that restricts the effectiveness of causal agencies to particular effects lies in the necessity of their subsisting in the same substrate with the effect to be produced; and hence if this sole restriction were removed, any effect could be produced by any cause anywhere |.

(b) Sound produced by disjunction we find in the case of the splitting of the bamboo; in which case the Sound is produced by the disjunction or separation of the bamboo-fibres from  $\bar{a}k\bar{a}sha$ ,—this disjunction being aided by the disjunction among the bamboo-fibres themselves.

Sound thus produced produces other sounds all round one sound on each side of itself; each of these again sets vp another sound;—and so on, till there is produced a sound in that part of  $\bar{a}k\bar{a}sha$  which is enclosed within the eardrum; and that sound, which inheres, is produced, in the part of  $\bar{a}k\bar{a}sha$  therein enclosed, is perceived through the relation of *inherence* (because the sound inheres in the ear or auditory organ, and this organ is only a form of  $\bar{a}k\bar{a}sha$ ). In the case of the perception of the genus or class-character belonging to these sounds, the 'contact' is in the form of 'inherence' of the inherent (the genus inhering in Sound which inheres in the  $\bar{a}k\bar{a}sha$  of the Auditory Organ). (5)

In the perception of Inherence and Non-existence, the contact bringing about that perception is in the form of the relation of the qualification (Inherence being the qualification of that which is inherent, and Non-existence the qualification of the spot on Earth which is perceived). (6)

Thus then, we find that the Sūtra has made use of the word 'sannikarşa', 'contact', because it includes all those conditions that give rise to Perception—viz., conjunction, inherence and qualification-qualified relationship. And this contact is regarded as the distinguishing feature of Perception, because it is what brings about the Perception.

An objection is raised :---

"If the 'contact of the object and sense-organ' is mentioned in the definition, simply because it is what brings about Perception, then what is mentioned is only a small portion of what should be mentioned: there are many other factors that bring about Perception; and all these also should be mentioned; for instance, the contact of the Mind and Soul. the contact of the Sense-organ with the Mind, the contact of the object with light, the colour of the object, the colour of that which is in contact with the object (i. e. the Eve and the Light which, by means of their own colour, render the object perceptible), the large dimension of the object, the multiplicity of the component particles of the object (which. if consisting of only one particle, would be merely atomic and hence imperceptible,) and the faculty (in the Self)\* conducive to the perception. 'Why should these be regarded as the cause of Perception?' For the simple reason

<sup>•</sup>All cognitions are due to the faculty in the Self caused by past *Dharma* and *Adharma*.

that Perception appears when these are present, and does not appear when they are absent. Thus then, if the 'Contact of the Sense-organ with the Object' is mentioned because it is the cause of Perception, all the rest just enumerated should also be mentioned for the same reason."

It is not necessary to mention these other factors. The Var: Page 34 Sufra is not intended to enumerate all the causes of Perception; it is meant to indicate only those characteristics which serve to differentiate it from other things, homogeneous and heterogeneous; hence the Suframentions only that factor which is the cause peculiar to Perception, and not those that are common to other kinds of cognition.\*

+" In that case ", says the Opponent, "it is necessary to mention the contact of the sense-organ with the mind,—as this is a factor that is peculiar to Perception."

(A) That is not at all necessary, we reply; as it is already implied by the words of the Sūtra ; that is to say, the purpose that would be served by the mention of the contact of the sense-organ with the mind is already accomplished by the mention of that between the Sense-organ and the Object. "How so ?" For the simple reason that both of these contacts are peculiar to Perception ; and it is not intended by the Sūtra to supply an exhaustive enumeration of all the distinctive factors that bring about Perception ; the Sūtra mentions only one such factor, as the mention of distinctive factor suffices anv one to differentiate Perception from the other forms of knowledge.

(B) Another reason for mentioning only the contact of the Sense-organ with the Object may be that it is this contact that forms the distinctive feature of every individual perception;

†See Bháşya p. 12, 1. 2.

The text reads nivar i yaid', the sense apparently points to 'varnyaid' as the correct word.

in every individual perception, born as it is of the contact of the sense-organ with the object, what differentiates it from every other perception is either the sense-organ concerned, or the object perceived; as every perception is named after one or the other of these two; whenever there is a perception, it is called either after the organ, or after the object; for instance, when we perceive colour, the perception is called either 'visual-perception' or 'colour-perception' :---and no perception is similarly named after the contact of the senseorgan with the mind; for instance, \* the perception of colour is never called 'mental perception'. + "But there are mental perceptions arising from the contact of the Mind and the Soul,-and all these are called after the Soul, as well as after the Mind". Our answer to this is that everything is named after that which is peculiar to itself; for instance. when a seed sprouts, it is due to a number of factors; such as the particular time of the year, the seed, and so forth : and yet the plant is named, not indeed after the time of the year and such other factors, but only after the seed, which is the one factor peculiar to itself, which distinguishes it from all other sprouts : it is called 'the barley-sprout';--so also in the case in question, [it is the contact of the sense-organ that forms the distinctive feature of Perception, and not that of the mind, which is common to all forms of knowledge]. Thus then, there is nothing objectionable in the definition provided by the Sūtra.

(C) Another explanation proposed by one section of Naiyāyikas is that the contact of the sense-organ with the mind is not

<sup>•</sup> The reading tupalambane is a misprint for rupulambane

 $<sup>\</sup>dagger$  The Yogin has the perception of his Soul; and this perception is independent of the contact of sense-organs; this perception is called the 'perception of the soul', just like 'the perception of colour '; and it is also called 'mental perception', just like 'visual perception'. Hence the Mind-soul contact is just as distinctive of individual perceptions as the sense-object contact; hence both these contacts should be mentioned.—*Tātparya*.

mentioned, because it is a factor that is common to Perceptions that are otherwise different; that is to say, the sensemind contact does not differ, it remains the same, in different perceptions (with each of which the sense-object contact varies).\* "If the mind-sense contact is not mentioned simply because it is the same in all Perceptions, then, for the same reason, the sense-object contact also should not be mentioned; as this also is the same in all Perceptions obtained through any one sense-organ; for instance, when we have the perception of the white moving bull, in the form ' the white bull is moving' (even though we have two distinct perceptions, that of the cow and that of the movement, yet the contact of the sense-organ remains the same)". It is not right to urge this objection; as it has already been answered; we have already given the answer to this objection, when we have said that the  $S\overline{u}$  is not meant to contain an exhaustive enumeration of all that brings about Perception ; this answer is quite sufficient so far as our own view is concerned; as regards the view of some Naiyāyikas, against which the present objection has been urged, we simply do not accept that view (and so are not bound to find an answer to it). †

(D) There is yet another explanation for not mentioning the contact of the mind and the sense-organ: It is not mentioned, we say, because it is similar. "It should be pointed out to what it is similar." Well, it is similar to the contact of the Mind and Soul. "What is that *similarity*?" It is this, that the perception is not named after them  $\ddagger$ ;—or the similarity may be regarded as consisting in the fact that both subsist in a

+ This is the Vartika's own interpretation of Bhasya passage, p. 12, l. 2.

‡ Just as the Perception is not named after the Mind.

<sup>•</sup> E. G. When we see a crowd of men, elephants, horses, &c., the factor of mind-contact is one and the same for all; but the sense-object contact is different with the perception of each of the things perceived.

substratum which is imperceptible by the senses : just as the Mind-soul contact has an imperceptible substratum, so also has the Sense-mind contact ;—or the similarity may lie in the fact that neither of the two belongs to the object perceived : just as the Mind-soul contact does not pertain to the perceived object, so the Sense-mind contact also ;—or lastly, the similarity may lie in the fact of both belonging the Mind : just as the Mind-soul contact subsists in the mind, so the Sense-mind contact also.

\* Thus then, because the Sense-mind contact is similar to the Mind-soul contact,—or because all that is necessary is accomplished by the mention of any one of these two,—the Sūțra does not mention both.

+The Opponent now raises an objection to the definition as a whole-" It is not right to define Perception as produced by the contact of the sense-organ and the object; as the sense-organs operate upon things without actually getting at them (hence no contact of these is possible). For instance. according to some philosophers both the Eye and the Ear are operative without getting at the object; and in support of this view they put forward two reasons :--- The Eye is operative without getting at the object, (a) because it apprehends things at a distance from it, and ( $\mathcal{E}$ ) because it apprehends things very much larger than itself (and of varv-(a) It is a matter of common experience that ing sizes). we see, with our eye, a thing which is lying on a spot at some distance from ourselves; and certainly, in this case the Eye does not get at the thing seen; specially as the organ is only a particular kind of material substance (and as such incapable, by itself, to move up to a thing at a distance);

<sup>&</sup>lt;sup>o</sup> The *Tātparya* notes that the first reason is the one that is given in the Bhāşya; and the second that which the Vārţika itself propounds.

<sup>†</sup>This is a fresh objection raised in the Vartika, and is not mentioned in the Bhāşya.

that which is called the 'Eye' is only the \* material substance in the shape of the dark spot (the *pupil*), which is aided (in its operation) by another material substance (light) outside itself, and further depends upon the desire to see (on the part of the person to whose body the dark spot belongs) and also upon the past karman (of that person, conducive to the particular experience of visual perception) ;---this fact has been the following words-' The Eye becomes explained in the means of perceiving colour, because it is brought into existence by the karman that is conducive to the experiencing of colour as preceded by a desire for that experience'. Similarly with the other sense-organs also. Thus then, the Eve-ball (which, by the above definition, is the visual organ), aided by another material substance (light), cannot possibly get at the object (apprehended by its means). Hence we conclude that the Eye is operative without getting at the object, because it apprehends things at a distance. Some people explain the reason 'santaragrahanat' in a slightly different manner: in the case of the Nose and the other organs that operate by getting at objects, things are not perceived as 'this is at a distance from us'; while in the case of the Eye, things are so perceived. (b) Another reason for regarding the Eye as operative without getting at the object lies in the fact that it apprehends things of larger and varying dimensions; for instance, we see such large things as the city, the forest and the like; while the Eye is never found to be of such large sizes. (c) †A further reason for the same view lies in the fact that in the case of perception by the eye, there is mention of the particular direction in which the thing is perceived; (in the form 'the thing that

+ If it were necessary for the Eye to get at its object, we could see only those things that would be exactly of the same size as the Eye; as only such things could be get at by the Eye can never get at the entire forest that is seen.

<sup>\*</sup>The sense of this is that a particular material substance, when making known colour, with the help of the past Karman of the perceiver, is called the *Eye.* —*Tatparya*.

I see is to the east of me'); if the eye were operative by getting at the object, there could be no such mention of the direction; as we find no such mention in the case of perceptions by means of the Nose and such other organs as operate by getting at their objects. (d) A Vär. Page 86. fourth reason in support of the same view is that at one and the same time the Eye apprehends near as well as remote things: anything that has motion, when it continues to move, it gets at the nearer object sooner than it does at the remoter one; whereas in the case of the Eye, we find that we see the branch of the tree (which is near us) at the same time that we see the moon (far off from us); all which goes to prove that the Eye has no motion ; and hence cannot be operative by getting at the object."

To the above, the author offers the following reply :---

(a) The first reason given is 'sāntaragrahanāt--- 'because we sea with our Eye, a thing which is lying on a spot at some distance from the Eye; '-this reasoning is not sound. does not stand an examination of the several 88 it alternative explanations of which the expression is capable : What. we ask, is the meaning of the expression sānļaragrahana ? (1) Does it mean the perception of the santara-of that which, being at a distance, is not got at? (2) Or the perception of the thing along with distance (antara)? We shall take the former first. We grant that the expression 'santaragrahana' means the perception of that which is not got at:-but in this case we find that this is exactly what is meant by the proposition that you are seeking to prove; and as such cannot be regarded as a reason in proof of that "Why so?" Simply because what is meant proposition. to be the reason or proof is already implied by the proposition sought to be proved ; that is to say, your reasoning turns out to be- ' The Eye cannot operate by getting at the object, because it apprehends things without getting at them ', in

which it is clear that what is put forward as the reason does not differ from what it is meant to prove. If then, you accept the second of the two alternative meanings mentioned above and explain 'sant aragrahana' as 'perception along with the distance',-we ask, in that case, what is that 'distance' which is perceived, by the Eye, along with the object? Is it  $\bar{a}k\bar{a}sha$ ? or mere negation? or some other substance ? If it is ākāsha, then, it could never be an 'object of the Eye'; ākāsha is never perceived by means of the Eye; being, like Air and the rest, without colour. If the word 'antara' (distance) means some substance that has colour, then, as no coloured substance can be transparent, such an intervening substance would act as an obstacle to the perception of the other object; and hence there could be no perception of this object along with that other coloured substance. If lastly, the word 'antara' means negation \* then, it is a well-recognised fact that negation, independently by itself, can never be perceived by means of the Eye; if then, the negation that is meant is that which is perceived (not by itself, but) as pertaining to the coloured object seen by the Eyet,--then in that case the reason 'santaragrahanat' becomes inconclusive (incapable of proving that the Eye does not get at its object).

As pointed out above, some people, regarding themselves very wise, seek to explain the expression ' $s\bar{a}ntara$ grahana' to mean the perception of a thing in the form 'this is remote from me.' But this explanation also cannot be

• Whenever a negation is perceived, it is perceived only as related to some. thing; and never independently by itself.

† If the negation perceived is as pertaining to the colour that is seen,—*i. e.* the negation is perceived along with what is seen—then, such a negation is found to be perceived in the case of Touch also; when *f. i.* we feel the cool touch of water, and along with it, perceive the negation of heat: Hence inasmuch as such sanfer ro per ception (*i. e.* perception of negation along with the perceived thing) is found in the case of Touch also, the organ of which does actually get at its object,—the reason sanfaragrahan& cannot conclusively prove that the Eye does not get at its object.— *Y&paryz* 

accepted; as the idea that 'the thing is remote from me' is due to other causes (and not to the sense-organ getting or not getting at its object); it is on account of entirely different causes that we perceive things as remote from ourselves; it is with reference to our body that we regard a thing as remote from us; a thing is regarded as near or remote to ourselves only with reference to our body; and this idea is not due the thing being got at or not got at by the sense-organs. In a case where the body and the sense-organ are both in touch with the object, we regard it as near; and when the object is related only to the organ, (and not in touch with the body), it is regarded as remote. Thus then, the perception of the thing as *remote* being due to other causes, such a perception cannot be accepted as a proof of the Eye not getting at its object.

(b) The second reason propounded above, in support of the view that the Eye does not get at its object is -prilhu-taragrahanāt '-- ' because it apprehends things larger than itself'. This also is not right; as mere\* connection with the thing is enough to bring about its perception (and it is not necessary for the entire thing to be in contact with the Eye); as a matter of fact, all our perceptions of things of varying dimensions, of the large as well as the small thing, proceed from mere connection (of the sense-organ).

(c) The third reason propounded above is 'digdeshavyapadeshat'----- 'because there is mention of the particular di-

• The connection meant here is that of the sense-organ with the object; *i. e.*, of the object with some parts of the organ, of the organ with parts of the object; of parts of the object with parts of the organ; this connection is possible only if the light emanating from the eye goes on expanding outwards, spreading wider and wider as it proceeds farther and farther; the passage of the text therefore shows that the author accepts this view of wider expansion. The light from the lamp, though originally centred round the wick, moves out of it in gradually expanding circles; and it is only thus that the light illumines objects of varying sizes ;—so, in the case of the eye, the light, centred in it, moves out of the eye, and moves out in gradually expanding circles, and thereby renders perceptible things of varying sizes. —Tapparys

rection in which the thing is perceived .' This reason has already been refuted (Text, p. 36, l. 20, by pointing out that this mention is with reference to the body, and not to the senseorgan). As a matter of fact, we find that in cases where the sense-organ and the body of the perceiver are both in contact with the object perceived, there is neither a mention of the direction (as that ' the object is to the east of me '), nor any idea of the thing being near or remote (to the perceiver); when, however, the object is in contact with the sense-organ only (and is not in touch with the body), then alone we have such notions as those of direction, of proximity or remoteness;-all these notions being relative to the body and dependent upon the largeness or smallness of the number of conjunctions or connections of the sense-organ, which is in contact with the object, with points of space intervening between the object and the body. \*

(d) The fourth reason given above is-' because we see the branch of the tree (which is near us) at the same time that we see the (distant) moon'. This also cannot be accepted ; as the fact cited is not admitted : What sane-minded man is there who admits that the perception of the tree-branch is simultaneous with that of the moon ? This idea of simultaneity is purely erroneous, due to our non-apprehension, of the difference in the time of the two perceptions; just as in the case of the piercing with a needle of the hundred petals of the lotus (where the piercing of all the petals is felt to be simultaneous, only because the difference in the time of the different petals being pierced is not apprehended by the observer). " How do you know that the idea of simultaneity is due to the non-apprehension of the difference in time, and not to real simultaneity?" What leads us to that conclusion is the inference based upon the impossibility of obstruction.

<sup>&</sup>quot;When I see a cow I regard it as near, when the points of space between the cow and my body are few ; and 'remote' when these points are many.

\* That is to say, if the Eye were operative without getting at its object, there could be no power in walls or screens to obstruct the vision; and thus there would be an impossibility of obstruction ; as a matter of fact however, there is no perception of things hidden behind the wall and such other things; hence the conclusion is that the Eye can not operate without getting at its object. And further, if the Eye were to operate without getting at the object, we could not explain the well-recognised fact that we see things near us, and do not see those far away from us; † if it were true that the Eye apprehends its object without getting at it, then it could not be that it would apprehend things near it, and not those away from it; while that it is so is a well-recognised fact; this also leads to the conclusion that the Eye does not operate without getting at the object. In answer to the above the Opponent puts forward the following explanation :--" Because a thing becomes an object of perception (only when it is capable of being perceived, and not when it is not so capable) [this is the reason why the thing behind the wall is not perceived]." This is not right, we reply; nothing can become an object of perception without some sort of connection [there is nothing intrinsic in the thing which makes it capable of being perceived; this capability must consist in its having some relation with something. **‡** What the argument of the Opponent means is as follows :--- " As a matter of fact, that thing which

†' The only explanation for this fact is that the Eye—or the light from the Eye—oran go up to a certain distance, and not beyond it; so that it falls upon the near object, which is seen, and not upon the remote object, which, therefore, is not seen.—*Tatparya*.

‡If there were any thing in the object itself which makes it perceptible, then, what is perceptible would always be perceptible ; which is absurd.

<sup>•</sup> If it were not necessary for the Eye to go up to the object for apprehending it, what obstruction could the wall put to it? In case it has to get at its object, what moves forward is the light proceeding from the eye; and the movement of light would naturally be obstructed by the wall and other opaque things; and thus the light not getting at the object, there would be no perception of the thing in this case,  $-Ta_{i}parya$ .

becomes an object of perception by the eyes is perceived, and that which does not become such an object is not perceived; and things hidden behind obstacles, or placed at a distance, do not become objects of perception by the eye; and

Var. p. 38. it is for this reason that these things are not perceived, [and not because the eyes do not get at them]." Our answer to this is that the reasoning is not correct; as we do not admit that a thing can become an object of perception, without some sort of connection (with something else). Apart from such connection, what could this becoming an object be ? Hence what you differ in from us is only in the matter of names, and not in reality : What we call 'connection' you call 'becoming an object'; and there is no real difference at all, as to facts.

The Opponent puts a further question :--- " What is the proof for the Eye getting at its object ?" The proof, we reply, lies in the fact of the Eye being a sense-organ; the reasoning being-' the Eye operates by getting at the object, because it is a sense-organ, like the Nose ;---we have found that the Nose and other sense-organs operate by getting at objects,-and the Eye also is a sense-organ,-therefore the Eye must operate by getting at the object.' In case no sense-organ is admitted to be operative by getting at objects, we can make all sense-organs the 'subject' of our reasoning; and in that case our 'reason' would be ' because they are instruments'; the reasoning being put forward in the following form :- 'We have found that the axe and such other instruments operate on their object only by getting at them,-and the Sense-organs are instruments,therefore the sense-organs must be operative by getting at their object.'

\*" In case, through extreme obstinacy, it be held that all things in the world are operative without getting at their ob-

<sup>&</sup>lt;sup>o</sup> The view represented here is that it is through its intrinsic potency that the cause produces its effect, irrespective of its getting or not getting at the latter.

jects,-how then would you prove your case ?" Well. this obstinate man should be met with the argument that even potent causes do not bring about their effects in the way that they should do, [if their effectiveness depends solely upon their own intrinsic potency, and is not aided by other auxiliary circumstances]; --- that is to say, if all these causes bring about their effects, by themselves, irrespective of getting at one another, without having any potency to them (by extraneous circumstances),-then, added how is it that effects are not produced in all places and at all times (as there is no time at which the causo may not be present somewhere or the other, and its mere presence should bring forth the effect)? This is what will have to Thus then, we conclude that there be explained. is no cause that is operative without getting at the object : and of this we have many instances in ordinary life, -e.g. the potter's stick, his wheel, and so forth.

Thus then it is established that Perception is the cognition 'produced by the contact of the Sense-organ with the object.'

\* A fresh question is raised.—" For what purpose is the word 'cognition' introduced into the definition?" It

\* On p. 41 of the Vartika, we find ' the cognition of pleasure' mentioned as' produced by sense-object contact ' and in the present context ' Pleasure ' is also spoken of as produced in the same manner ;- the Bhasya on p. 16 includes ' Sulhadi' under Perception.' What is the point then in excluding Pleasure from the definition of Perception? It is true that in the 'cognition of pleasure' being produced there enter some more factors than in ordinary perception; as the Tapparys remarks on p. 81, 1-6-8 and 27-28 ; but that cannot justify the exclusion of this cognition from ' Perception.' Taking the present passage with 1. 15 on p. 41, we are led to believe that the Varfik. makes a distinction between 'Pleasure' and 'Cognition of pleasure.' But what is , pleasure' apart from our feeling of it? and feeling is only a form of 'cognition.' It may be that in some cases pleasure, even though present, is not fell; but that is the case with all cognitions. The Tat. on p. 81 speaks of Pleasure, as amenable to Mental Perception. So the attempt to exclude pleasure from 'Perception' can be justified only on the distinction between ' Pleasure' and 'Cognition of pleasure' Pleasure is the object, and not Perception itself ; hence just as colour being distinct from colour-perception, cannot be included in perception, so also pleasure being distinct from pleasure-cognition, must be excluded from Perception.

is introduced, we reply, for the purpose of excluding Pleasure and such other things; Pleasure and Pain also are 'produced by the contact of the sense-organ with objects'; hence for the exclusion of them it is necessary to add the word 'Cognition' [Pleasure and Pain not being cognition].

With regard to this Perception 'produced by the contact of the Sense-organ with objects,' the Bhasya" has represented an objector as putting forward the objection that 'every perception is called after the name of its object (which makes every Perception verbal).' And it is with a view to reject this view that the Sūtra adds (to the definition) the qualification 'avyapadeshya', not expressible by words; the meaning of which is that perception is that cognition † which follows, and varies with, the variations in the object, and appears in a person who has not made use of, and does not yet know, the (denotative) relation that the object may bear to any word or words;-in fact even for the person who knows this latter relation of the object to its name, at the precise moment when the cognition appears, it appears in a form which is entirely free from any idea of the said relation [the idea of this relation coming to the mind only subsequently].

Some commentators explain that the qualification 'avyapadeshya' is added with a view to exclude Inferential Cognition. ‡ This is not right. Why? Because the de-

•The words of this sentence seem to imply that the Vartiza is quoting the Bhāzya. But no such sentence is found in the Bhāzya; and the Tātparya remarks that the present passage explains the purport of the Bhāzya passage (pp. 12-13).

+ This qualification is meant to show that the cognition in question is not *v srbal*.

**‡** How Inferential Cognition is excluded by the qualification is thus explained by the *Tatparya*:-

When, from the contact of the sense-organ with objects we infer the motion of the senseorgan, the inferential cognition of this motion is also 'produced by sense-object contact'; as it is from this contact that the inferential cognition proceeds. And it is with a view to exclude such inferential cognitions from the category of 'perception that the qualification 'avyapadistys' has been added finition already mentions the qualification 'produced by the contact of the sense-organ with the object'; as a matter of fact, inferential cognition does not proceed from the contact of the cognised object with the sense-organ; hence (even without the qualification 'avyapadēshya') the definition could not apply to Inferential Cognition.

(c) Says the Bhāsya (p. 14, l. 6) :- 'During the summer it often happens that the Sun's rays become mixed up with heatrays radiated from the earth's surface; and the two together flickering at a distance come into contact with the eye of the observer, who apprehends them as water'. It is with a view to exclude such wrong apprehensions that the Sūţra adds the qualification 'avyabhichāri', which is not erroneous.

"What do you mean by a cognition being Erroneous ?"

It means that it is the cognition of a thing as what it it not.

"What is it that is erroneous? Does the error lie in the Object or in the Cognition?"

\*Some Naiyāyikas offer the following explanation :---The *Error*' lies in the *object*: it is the object that appears as what it is not; and it is on account of this wrong appearance of the *object* that the *Cognition* is called 'erroneous."

This explanation however it not right. "Why?" Because the object all the while remains as what it actually is. In regard to the flickering rays of the sun, when there arises the cognition of water, there is no error in the object; it is not that the rays are not rays, nor that the flickering is not flickering; what the error lies in is the Cognition; as it is

\* 'Bkadishimatam'-Tatparya.

<sup>&</sup>quot;Apadishts' is the statement of the reason or premise; "yapadisha (eiapadisha) is the correct statement of the premise; "yapadishya' is that cognition which is obtained from the said vyapadishe or statement of premise; and "avyapadishya' is that cognition which does not follow from the statement of the premise; thus then avyapadishya' is equivalent to 'not inferential."

the Cognition which, instead of appearing as the 'cognition of the flickering rays,' appears as 'the cognition of water,'--i.e. the Cognition of a thing as something which it is not; there being no water there (and yet the Cognition is 'of water');-- what happens in this case is that the Cognition \* after having apprehended the rays with the Eye, falls into an Error, by reason of some defect in the perceiving organ; hence it is in the Cognition, and not in the object, that the 'error 'lies.

(d) Says the  $Bh\bar{\sigma}sya$  (p. 15, l. 1)—' When the man observes from a distance and sees something rising from the earth, the Cognition that he has is in the doubtful form §c., §c., §c.' It is for the purpose of excluding such doubtful cognitions that the Sūţra adds the qualification 'vyavavasāyaţmākam,' 'which is well-defined.'

An objection is raised—" The qualification is not necessary for the excluding of doubtful Cognitions; as doubtful Cognitions are not produced by the contact of the object with the sense-organ; as a matter of fact, doubtful cognition is not produced by sense-object contact; it is a cognition due to Mind (and not to the sense-organs); specially as the word 'samshaya' is synonymous with 'samshīți, [i. e. the root 'shi' with the prefix 'sam', which signifies 'cogitation based upon some particular character'; and this 'cogitation' consists in the attributing of two mutually contradictory characters, recalled to the mind, to a single substratum : hence all that the Sense-organ does is to present to the mind that one substratum; and all the rest of the process of the

<sup>•</sup>The translation follows the interpretation of the Tatparya ; which construes the passage as *indriving marich*:*ndlochya*, *indrivopaghātadotāt viparyāți* ' and explains that the first *dlochya*, refers ' to the *nurvikalpaka* cognition, which is never ' erroneous.'; the error comes into only the subsequent Savikalpaka cognition.

It appears simpler however to construe the sentence to mean that it is by reason of apprehending the thing with a deranged organ that the Cognition falls into the Error &e.'

cogitation,—the recalling of the contradictory characters, and the attributing of these to the perceived substratum—is the work of the Mind; hence Doubtful Cognition must be regarded as a purely *mental* product.]"

This is not right, we reply. Because a doubt is caused by both : both are the cause of doubt,—the contact of the Soul with the Mind, as well as that of the Object with the Sense-organ ; and what is meant to be excluded by the qualification '*vyavasāyātmīkam*' in the present instance is that Doubt, consisting of non-ascertainment by the Mind, which is preceded by the non-ascertainment by means of the sense-object contact; as of this Doubt the sense-object contact is the cause; and the qualification is not meant to exclude that other kind of Doubt which proceeds merely from the contact of the Soul with the sense-organ. Thus then, we conclude that there is something to be excluded by the qualification, and hence it is quite right for the Sūţra to add the qualification '*vyavasāyāţmakam*.'

Another objection is raised against the definition :----" The definition ' that which is produced by the contact of the sense-organ and the object and so forth ' does not apply to the (cognition of the) Soul or Pleasure &c., because the Mind (which is the instrument of these cognitions) is not a ' sense-

Vār. P. 40. organ'; and thus the proposed definition of Perception becomes too narrow. 'How is it that the Mind is not a sense-organ?' For the simple reason that it is not mentioned in the *Satra* which enumerates the 'sense-organs'; as a matter of fact, we find that the Nose and the other 'sense-organs' are all mentioned in the *Satra* (1-1-12), and the Mind is not mentioned among these; hence the conclusion is that the Mind is not a sense-organ. Nor is the Mind mentioned as a sense-organ in any other *Satra*; hence there is no authority for regarding the Mind as a sense-organ. Thus then, the Mind not being a sense-organ, Pleasure &c., (as brought about by the instrumentality of the mind) would not be amenable to Perception. As a matter of fact however, all these are amenable to Perception, and not to Inference; for the simple reason that there is no probans or inferential indicative available; and in the absence of the probans, there can be no cognition of a thing that is amenable to Inference. Nor is there any other means of cognition capable of providing the cognition of Pleasure, etc.; and they are not amenable to Inference; thus then there is no alternative left; it is absolutely necessary that the cognition of these should be included in 'Perception' [and yet under the proposed definition, this is found impossible]."

To the above we make the following reply; Who says that Pleasure and the rest are not amenable to Perception ? "Well, that they are not so has been said by the philosopher who defines Perception as produced by the contact of the sense-organ and the object." Certainly there is nothing wrong in the definition: the Mind is a sense-organ; and hence the cognition of Pleasure is a cognition produced by the contact of the sense-organ and the object. Then, as for the Mind not being mentioned in the Sūtra enumerating the "What is this difference ter from the other Sense-organs. in character ?" The difference lies in this that while the Mind operates upon all (perceptible) things, every one of the other organs operates upon only a limited number of of things ; as a matter of fact, the Mind is effective on all objects, -while the others are not effective on all objects. That the Mind is effective on all objects is proved by the following reasonings:-(a) ' The Mind is effective on all objectsbecause it is the substratum of that contact which is the cause of remembrance,-like the Soul;-(b) because it is the substratum of that contact which brings about the cognition

of pleasure—like the Soul ;---(o) and because it supervises over all Sense-organs—like the Soul.

The Bhasya (p-16, ll. 5-6) itself has mentioned cnother point of difference between the Mind and the other sense-organs :--viz., that the other sense-organs are all material. while the Mind is immaterial. But this is not right ; and such a statement is contrary to facts : in reality the Mind is neither material nor immaterial; materiality and immateriality are properties belonging to products\*; [hence to say that the mind is immaterial would mean that it is the product of something other than matter]; while as a Matter of fact the Mind is not a product at all: and as such it cannot be either material or immaterial. Then again, the character of materiality cannot possibly belong to the Ear (which being ākāsha itself, cannot be regarded as a material product); consequently, if the non-mention of the Mind in the Sulra be explained as being due to the fact of its being different from the other sense-organs in that it is immaterial while those are material, - then, in that case, for that same reason the Ear also should not be mentioned in the Sutra; as the Ear also is " In the neither material nor immaterial (product). word 'bhaūtika', the affix has a reflexive force (so that the word means matter itself, and not product of matter.) [And the Ear, as ākāsha, is certainly matter ]." This explanation is not right; as in that case, the affix would become absolutely useless: what you mean is that the word 'bhautika' is synonymous with ' bhūța'; but if it is so, then the affix (in the word 'bhaufika') has absolutely no meaning ; no additional meaning being afforded by the affix (over and. above what is signified by the word 'bhuta' itself); and the addition of the affix therefore becomes totally meaningless Var. P. 41. and futile.

<sup>•</sup> That which is produced out of matter is 'material; that which is produced not out of matter, but out of something else ' is immaterial.

It has been urged by the Opponent (in the Bhāsya that there is no mention of the Mind as an organ (of cognition). But this is not true; the Mind is actually mentioned as an organ (of cognition) in Sūțra 1-1-15 which speaks of 'the impossibility of simultaneous cognitions as indicative of the presence of the Mind'; and from this it is clear that the Mind is an instrument or organ of cognition.

Another point of difference between Mind and the Sense-organs, mentioned in the Bhasya (p. 16, ll. 5-6) is that the Eye and the rest are organs 'only as endowed with certain specific qualities' (while the Mind is an organ without being endowed with any specific quality). But this also is not right; as if this were true, then also it would follow that there should be no mention of the Ear [which does not, through its own quality of sound, make perceptible Sound exterior to itself, as the other senses do: for instance, the Nose makes perceptible the Odour outside itself, through the odour inherent in itself; while the Sound that is apprehended by the Ear is actually that which is produced within the Ear itself].

For these reasons we conclude that the only point of difference between the Mind and the other sense-organs is that while the latter are effective on only certain particular objects, the Mind is effective on all objects. [And this affords the reason for Mind not being mentioned in the Sa(r.s along with the other sense-organs.]

The  $Bh\bar{a}_{sya}$  (P. 16, l. 9) supplies another reason for Mind not being mentioned in the  $S\bar{u}_{tra}$ —'because the fact that the Mind is a sense-organ can be learnt from another philosophical system.' As a matter of fact, we find the Mind mentioned as a sense-orgar in the S $\bar{u}_{tra}$  of another (*Vaishēsika*) philosophical system; and as this mention has not been controverted in the  $Ny\bar{a}ya$ -s $\bar{u}_{tra}$ , it follows, from this non-controverting, that the fact is accepted. \*An objection is raised :---- "This is not right; as in that case, the mention of the other Sense-organs would be futile; the other sense-organs also have been mentioned by the other philosophical systems; and hence these also should not be mentioned, if the mere absence of denial mean acceptance."

This objection is not well taken ;—the objector is ignorant of the ways of philosophical writers : The fact of the matter is that you are not conversant with the ways of philosophers : it is a rule with all systems that those theories of other system<sup>•</sup> which are not directly negatived are meant to be accepted as true. (Bhā. P. 16, ll. 9-10). And then, unless a philosophical work lays down certain positive propositions, there can be no distinction, for that philosophy, of 'one's own theory' and 'another's theory;' that is to say, [by arguing that Gautama should not mention any sense-organs as all of them are found mentioned in other works] you would set aside entirely the statement of one's own philosophical views, simply on the ground that other people may have propounded them; but if this were so, then there could be no distinction of 'one's own theory' and 'another's theory 't.

For these reasons it follows that there is such a thing as the *Mind*, and that it is an organ (of perception). And thus it follows that the cognition of pleasure is 'produced by the contact of the sense-organ and object', and thus becomes included in the definition.

†Every theory is mentioned in some system or the other, being propounded in some philosophical work, or current among the common people. And what the view held by a certain person is cannot be known unless he expresses it by words; and it cannot be known if the man confines himself to denying the views he does not hold, and does not propound any positive views — *Tätparya*.

<sup>&</sup>lt;sup>e</sup>This refers to the objection urged by Dinnäga. 'If the Mind is accepted as an organ because the Sütra has not controverted that statement, then the mention of the other organs is also futile.'

A fresh question is raised as to whether the definition is to be taken piece-meal, or as one complete whole :- There is a doubt as to the definition of Perception that has been propounded : that is, are the qualifications to be taken as individually affording the necessary definition of Perception ? or are they to be taken as collectively affording that definition ? The ground for this doubt lies in the fact that we meet with both kinds of definitions; in some the qualifications are meant to be taken collectively, while in others severally, For instance, in Sūtra 1. 1. 10. we read-' Desire, Effort, Aversion, Pleasure, Pain and Cognition are the characteristics of the Self'; wherein each factor constitutes by itself a definition of the Self ;--so also in Sūtra 1-1-23, we have a definition of Doubt. wherein the qualifications are meant to be taken individually; while Sūtra 1-2-10 provides us with a definition of Casuistry as the subverting of another's declaration by means of suppositions,-in which the whole collectively forms the necessary definition ; so also in Sūtra 1-1-6, we have the definition of Analogy as 'that which accomplishes the desired end by means of similarity to something that is well-known', -where the whole forms one complete definition. And as what the present Satra propounds is also a ' definition', there naturally arises the doubt as to whether it is to be taken collectively or in parts.

The answer to the above is that the words of the Sūtra are to be taken collectively, as affording one complete definition of Perception; for the simple reason that each of the qualifications serves to excluded Inferential Cognition, Pleasure,

Vai. P. 42. Verbal Cognition, Wrong Cognition and Doubtful Cognition. If every one of the five words of the Sūtra were to constitute a distinct definition of Perception; then, by turns, Inferential Cognition and the rest would come to be regarded as 'Perception';\* similarly if only any

<sup>•</sup> For instance, if we took out the first word of the Süţra and accepted the rest of it as the definition of Perception, such a definition would apply to Inferential Cognition; and so on.

two of the words constituted the definition of Perception, it would include all to which those two qualifications would apply: so also if the definition were made to consist of three words only, all to which these qualifications would apply would have to be regarded as Perception ; and lastly, in case four words only were to form the definition, we would have to regard as Perception all in which those four qualifications would be present. Thus then, we have to reject the alternatives of accepting one or two or three or four words as constituting the definitions of Perception : and thus we set aside all the thirty contingencies (caused by the permutations and combinations of the four epithets), and take the entire Salra (with its five epithets) as forming a single definition. If each epithet is taken as forming a complete definition, then we have five definitions provided by the Sūtra; if the definition consist of any two epithets. we have ten; if it consist of any three epithets, we have ten : if it consist of four epithets, we have five, (these are the thirty contingencies rejected); and what we accept is the thirty-first alternative-in which all the five epithets are taken collectively as forming a single definition.

"How do you make out that the Sūtra accepts the thirty-first alternative and rejects the other thirty?"

"It is a well recognised principle that the affirmation of one particular thing out of a number of things implies the denial of the rest, and the denial of a particular thing implies the affirmation of the rest. That is to say, whenever we have the affirmation of one particular alternative (out of a number of possible alternatives), it implies the denial of the rest; as it is in the case of the affirmation 'he sees with the right eye,' which implies the denial of seeing with the left eye; and when there is denial of a particular alternative, it implies the affirmation of the rest; e. g. the denial 'he does not see with the left eye ' implies the affirmation of seeing with the other eye. Thus then, in the case of the definition under consideration the acceptance of the one alternative (out of the possible 31) implies the rejection of the other 30.

Thus is the nature of Perception duly defined.

Some people [e.g., Vasubandhu, the Bauddha logician whowrote his Tarkashāstra about A. D. 480] have defined Perception as 'Cognition proceeding from that same object'; but this is not right. The definition has been explained as follows :---"When the cognition proceeds from that same object after which it is named, and from no other object, that cognition is called *Perception*; this definition serves to exclude the inferential and other forms of cognition, as all these do not proceed only from the object cognised, proceeding, as they do, from that and many other things." Our objections against this definition are the following:-In the first place, it is not necessary to have the words 'artha,' 'object,' in the definition; if we said merely 'cognition proceeding from that,' it would mean 'from that object.' "But the word artha is added with a view to emphasise it; that is to say, the addition of the word 'artha' serves to lay stress upon the fact : so that the sense that would be got at by the phrase 'from that Var. P. 43. only ' is got at by the words ' from that object.'\*"

This is not right, we reply. As the purposes of emphasis are already found to be served by the single word '*futah*,' ' from that;' just as in the case of the word '*abbhaksah*' ('feeding upon water'), the purpose of the emphasis that the man lives upon *water only*) is served by the word 'water' itself (and it is not necessary to add any other word for that purpose). † Thus then, the word '*arthat*'

+ In answer to what has been said above, Vasubandhu might reply that if we had only the word fafah, from that', then, the definition would apply to the other forms of cognition also; as these also proceed from something; and this

<sup>\*</sup>The mere adjectival pronoun 'tatah' is meaningless unless some neun is added as qualified by it; hence also the addition of the word 'arthat' becomes necessary.— Tatparya.

being found to be superfluous, we have to reject also the view that the definition serves to exclude the inferential and other kinds of cognition.

something, be it an object (as in the case of Perception) or a cognition (as in the case of Inferential Cogniton which proceeds from the Cognition of the probane), could be spoken of as 'that'; hence all cognitions could be spoken of as 'proceeding from that ; ' with a view to avoid this contingency, it is necessary to add the word 'arthāt.' In answer to this we have the text 'we have also to reject the view etc. etc.' 'From that ' having been explained as 'from that after which it is named', the definition would not exclude the inferential cognition : as the latter also is named after its object 'the inferential Cognition of fire,' for instance. Nor would this be excluded by making 'arthat' serve the purposes of emphasis ; as such emphasis could exclude only that which is contradictory to, and incompatible with, what is mentioned ; and certainly in inferential Cognition there is nothing in congraous, or contradictory, in its being named after its object, even though it may have other names also, as declared by the propounder of the definition (p. 42 1. 19). There is nothing in these other things, from which the inferential cognitions proceed, which could be contradictory to or incompatible with, the 'that object' after which the Cognition is named. Thus then, the phrase fatah arthat' cannot exclude these other causes of inferential Cognition; hence this latter Cognition fails to be excluded by the definition.

• When we see 'an object, what we see are only the atoms of colour or such other distinctive qualities, and not any single composite object. But this cognition of the atoms is followed by the cognition of the object as one composite whole—e.g. 'This is a jar'; as the Bauddha does not admit of composite wholes, he regards this latter objective cognition as wrong, and hence calls it by the name of 'samerfifjadma. colour, and that proceeding from the jar is named after the jar; and hence there is no possibility of any such contingency arising (as you would exclude from the definition).

Perhaps you are under the impression that the jar and such other objects are nothing apart from the qualities of Colour and the rest. But, in basing your theory upon this impression, you are building castles in the air. How the jar etc., are something apart from their qualities, we shall explain later on. As a matter of fact, every cognition proceeds from its own object; hence the introduction of the word '*iaiai*', ' from that', in the definition is absolutely futile. (As it does not serve to exclude any cognition at all).

"But certainly, the Wrong Cognition proceeds from an "object which is not "that" (after which it is named). [and hence the phrase "from that" would serve to exclude the Wrong Cognition]." Certainly not, we reply. It is not that the Wrong Cognition proceeds from an object which is not "that," " it only appears in a form which does not belong to the real object (in contact with the sense-organ). So it seems you have not yet been able to understand what a Wrong Cognition is !

Thus then we find that of the three words of the definition—' fafah afrhāf vijäānam.'—the first two are found to be futile; and what is left is the single word 'vijäānam', ' cognition'; and this would be no definition at all (of Perception; which is a particular form of Cognition);—or if mere ' cognition' were the definition of Perception, then all cognitions would be Perception!

• When the shell is wrongly cognised as silver, this wrong cognition is not produced by what is not-shell; there is no doubt that the object whose contact gives rise to the cognition is the shell itself; what happens then is that the cognition is in the form of something (silver) which the actual object (shell) is not. Hence the wrong cognition, not proceeding from that which is not not-thei, cannot be excluded from the definition.

\* Even accepting the definition to mean what it is held to mean.—it is not possible for (a) the apprehended object (that from which the cognition proceeds, and which therefore is the cause of the cognition), and (b) the apprehending cognition (which is the effect of the former) to be present at one and the same time, [as the cause must always precede its effect]: so that the cognition, in this case, could not be percep-"But the destruction or disappearance of the cause tion. (Object) may be simultaneous with the appearance of the effect (Cognition) [so that even if the cause precedes the effect, the effect can appear at the moment of its disappear-This explanation cannot be accepted ; because ancel." there is no instance available of such simultaneity ; as a matter of fact, there is no instance of destruction and appearance being simultaneous. In any case there is no avoiding the absurdity that the object, which will have disappeared and hence become past, would under the definition, be cognised "The objection applies as perceived (in the present). equally forcibly to the original definition also [as in that also the object is a cause of the Cognition, and should therefore have gone before the Cognition |; and in this case also what instances of simultaneity (which is necessary) are The objection does not apply to available for you?" our original definition, we reply; as we have already answered this; and we have explained the simultaneity under Sūtra 3, 2. 9.

Others (e. g. Dinnāga) have offered another definition of *Perception* :---

<sup>•</sup> As the cause and the effect cannot be present at the same time, 'antecedence' forming a necessary factor in the conception of the 'Cause'—the object (the cause) will have ceased to exist at the moment that the cognition will appear. So that the cognition as present ('the jar is') appearing with regard to the object that is past, would be clearly a wrong cognition ; and hence the cognition would not be the valid Perception that is intended to be covered by the definition.

"Perception is that which is free from determination. 'What do you mean by determination?' It • means connection with name and class; the meaning of the definition thus being—that is Perception which is not spoken of by a name or specified (designated) by class and the rest<sup>†</sup>, which is in keeping with the form of the object<sup>‡</sup>, which is definite § and self-cognisable ||."

To these people the following questions should be put :---Firstly (as to the word expressing what is defined) what is it that is denoted by the word 'Perception'? If it is the perceptional cognition that is denoted by the word, then how can it be regarded as 'not spoken or by a name' ?¶ (and yet this forms the first differentium in your definition). If, on the other hand, perceptional cognition is not denoted by the word 'Perception,' this word becomes meaningless (and yet your definition contains this word.), If then, it is held that what is denoted by the word 'Perception' is some sort of generic (unspecified) thing, then we ask-Is this generic thing something other than Perceptional cognition? or the same as Perceptional cognition? If the former, then Perceptional cognition remains undefined (and yet it is this very cognition that the definition is meant to define). And if the latter, then, in that case, how could you hold Perceptional cognition

+ Action, ' quality,' connection.

1 This qualification precludes wrong cognitions.

§ This implies validity.

|| If it were not so, it would not be cognition ; and it is because it is self-cognized that it is ' free from determinations.'

The Tātparya says this would be contrary to the Bauddha tenet that words express only unqualified cognitions.

Secondly (as to be one that is 'not spoken of by a name'? regards the definition itself), if the expression 'free from determination' is meant to denote the Perceptional cognition. then the definition involves a self-contradiction. [Perceptional cognition has been defined as that which cannot be spoken of by a name, and yet it is spoken by the name free from determinations.] And if Perceptional cognition is not denoted by the expression, 'free from determination,' then the expression itself becomes absolutely futile (as a definition of Perception). Thirdly (as regards the entire statement of the definition). the statement, ' Perception is that which is free from determinations,' is in the form of a sentence. Now, what is it that is denoted by the sentence ? If it is Perception that is denoted by it, then there is the same self-contradiction. "How so?" Because Perception is actually denoted, ex-hypothesi, by the sentence 'it is free from determinations', and yet it is called 'undenotable,' 'not spoken of by a name'; ------and who else except the Bauddha can make such a self-contradictory assertion? If, on the other hand, the sentence does not denote Perception, then the assertion, 'Perception is that which is free from determinations', becomes a meaningless jargon of words.

Then again, Perception being actually spoken of by such words as 'non-eternal' and the rest, it cannot be absolutely incapable of being spoken of by a name (or word). That is to say, we find the Bauddha scriptures themselves speaking of Perception in the following words—'Perception is noneternal,' 'Perception is free from pain, and also selfless; if then ' perception can be spoken of by such vords, how, can it be 'incapable of being spoken of by words'? If it cannot be spoken of by these words, this would mean that Perception is not non-eternal; and so, it will not have been (rightly) declared by Tathāgata

## (Buddha) that 'all that is sanskrifa (amended or purified) is non-eternal ?\*

In that case all things **‡** would become 'perception.' Because no person, however well-instructed "How so?" he may be (as a Bauddha) can determine and speak of the 'specific individuality' of things; for the simple reason that this would be opposed to all philosophic conception, (specially of the Bauddha, accordin ' to whom the 'specific individuality' is undeterminable, something that cannot be of things definitely grasped and spoken of). As a matter of fact every object has two forms, general and specific; and whenever any object is spoken of, it is only in its general form. Nor does this give rise to the absurdity of the object being not spoken of at, all ;-because the object is not particularly spoken of in its specific form, it does not follow that it is not spoken of at all; for example, it is not that the Brāhmana is not spoken of by the word 'Man'; even though the word 'man' does not signify the specific features of the Brahmana-those that distinguish him from other men,-yet simply because the word does not signify the Brahmana along with his

Vār. P. 45. specific characteristics, it does not follow that the Brāhmana is not spoken of by the word 'Man,' at all. In the same manner, Cognitions also have the two forms —general and specific ; and even though their specific form

•As perception is also included in 'all' and if it is not non-eternal, all cannot be not-eternal.

**†**This is a Bauddha technicality: Every object has a distinctive form of its own but this is nothing positive, it is purely negative; the 'specific individuality' of the Cow consists in the negation of the not-cow; this is also called 'Apoha'.

**‡Dignäge** has not put forward his definition in connection with 'Right Knowledge'—as DharmakIrți has done ; hence the definition cannot be restricted to Cognition only. *Tatparya*. can never be spoken of by means of words, the general form can always be so spoken of [Hence the explanation of the definition becomes absurd].

If, in order to escape from this absurdity, the definition of Perception be explained to mean 'that which is not spoken of *in its specific form*,'-----then it would apply, not to Perception only, but to the entire Universe. [As no object is ever spoken of *in its specific form*.]

With a view to avoid these difficulties, the word 'kalpanāpodha' ('free from determination') may be regarded as a conventional name for the specific form of 'Perception' (without having any literal meaning of its own). But even thus the contradiction does not cease; for as already pointed out above, the specific form of anything cannot be spoken of by means of any word; and yet, the specific form of Perception would be sought, in the definition, to be spoken of by means of the word 'kalpanāpodha.' If (with a view to escape from this, it be held that) the word expresses nothing,—then what is the use of introducing the word at all in the definition—'Kalpanāpodham pratyakṣam'? Not expressing anything at all, it is exactly like the dream of a dumb person.

Thus then, it is found that the more we examine the definition proposed by Dinnäga, the more incapable it is found of bearing the scrutiny of reason.

Jaimini has proposed another Definition of Perception: "The cognition that is produced when there is contact of the man's sense-organs." Mim-sū. 1-1-5. This definition also is not right; because the said contact is the cause of the production of Doubt (and Wrong Cognition) also; this has been pointed out by the commentators upon this Safra of Jaimini (e.g. in the Shabhara-Bhāțya and the Shlohavārțika). This same argument also sets aside the definition of Perception as ' that cognition which appears when there is contact of the object with the sense-organs, and the mind is calm and clear\*'.

Similarly the definition supplied by Varsaganya cannot be accepted. He defines Perception as 'the functioning of the Ear and other sense-organs.' This definition cannot be accepted as it introduces the names of all the five sense-organs; hence any cognition in which even one of the five organs is not in operation would not be a true Perception'!

The method of reasoning employed in the refutation of these definitions will serve to show that all those definitions that are similar to those already refuted, cannot be accepted as true definitions.

Thus ends the explanation of the Definition of Perception.

#### INFERENTIAL COGNITION.

### Sūțra 1-1-5.

\* After Perception comes Inferential Cognition, † which is led up to by Perception; it is of three kinds—(1) ‡ the Pūrvavat, (2) the Shēşavat and (3) the Sūmānyatodrista. §

### Bhāşya.

# [Page 18, line, I to Page 20, line 6.]

Page 18. The expression 'led up to by Perception' refers to the perception of the relation between the probans and the probandum, as also to the perception of the probans itself; and the perception of the relation between the probans of the probandum also implies the remembrance of the probans; and thus it is by means of remembrance and perception of the probans that the non-perceptible thing is inferred.

I. [The first explanation of the three kinds of Inference] —(A) the  $P\bar{u}rvavat$  Inference is that in which the effect is inferred from the cause¶; e. g., when we see clouds rising, we infer that there will be rain. (B) The Shēşavat Inference is that in which the cause is inferred from the effect; \$ e. g., when we see that the water of the river is not like what it used to be, and that the stream is full and the current swifter, we infer that there has been rain.

(C) The Samanyatodrista Inference [is that in which the inference is based upon a general observation]; e. g., we have observed in all cases that we see a thing in a place different from where we saw it before only when it has moved; and from this fact of general observation we infer that the sun must be moving, even though we cannot perceive it (because

\* This is how the Tatparya explains the word atha.

† The Vartika expands this into--- 'that which is preceded by other forms of valid cognition and by two perceptions'.

<sup>‡</sup> These are technical names, of which the *Bhaşya* supplies two different meanings. Hence the names are left here untranslated.

§ Another interpretation of the Sätra has been proposed by the Vartika. (See below).

|| We see the fire and smoke together—this is one perception, that of the relation between fire and smoke ;—after some time we see the *smoke*—this is the second perception;—on seeing the smoke we remember the relation that we had perceived ; and this leads us to the inference of fire—the unperceived member of the relation.

The cause is 'purva' or prior to the effect ; hence that in which the inference is based upon the cognition of the cause, has been caller *Parvavat or a priori*.

\$ The effect being 'Shera or posterior, to the Cause.

we see the sun in the evening in a place different from where we saw it in the morning).

II. [Another explanation of the three kinds of Inference]. Or, we may explain the three names in the following manner :---(A) The Purvavat Inference is that in which out of two things as perceived on some former occasion, the one that is not perceived (at the time of inference) is inferred from the perception of the other; e. g., when fire is inferred from (B) The word 'shesavat' means remainder : smoke.\* hence the Shesaval Inference is that in which with regard to an object some of the likely properties being denied (and eliminated), and this elimination not applying to other likely properties, we have the cognition of those that remain (thus undenied); † e. q., in regard to Sound we find that it is an entity and is transient; and as these two properties (being an entity and being transient) are found to be common to Substances, Qualities and Actions only, their presence in Sound distinguishes it from the remaining categories of Generality, Individuality and Inherence (all of which three are entities, but eternal);--, then there arising a doubt as to Sound being either a Substance, or a Quality, or an Action, we reason (by a process of elimination) in the following manner: -(a) Sound cannot be a Substance, because it inheres in a single substance  $(Ak\bar{a}sha)$  [while there is no Substance which inheres in only one substance, all substances being either not inherent in any substance,-e. g., the atoms,-or inherent in more than one substance,-e.g., the jar, which inheres in more than one atom];—(b) Sound is not an Action, because it is the originator of another sound [it thus gives rise to something that is of its own kind; and this is never the case with any Action, which always brings about effects that are entirely unlike itself;-e.g., Action, in most cases, produces some kind of disjunction] ;---and by this eliminative conjunction or reasoning we come to the conclusion that Sound must be a Quality (this being the only member of the three that is (C) The Sāmānyatodrista Inference not eliminated) 1 is that in which, the relation between the probans and the

<sup>‡</sup> This example of *Shipavat* Inference is not accepted by the *Tatparya*—Parishipa is only another name for the purely negative inference; while the example cited by the *Bhapys* is one of the affirmative-negative kind. The example suggested <sup>1</sup>/<sub>2</sub> the inference of the fact of Desire' &co., being dependent upon the Self.

<sup>•</sup> The Purvavat Interence would thus be Inference by Prior Perception.

<sup>+</sup> The Shisavat inference would thus be Inference by Elimination.

probandum being imperceptible, the imperceptible probandum is inferred from the similarity of the probans to something else; e. g., when the Self is inferred from Desire; —Desire is a Quality, and Qualities always inhere in Substances; and (from this similarity of Desire to other qualities we come to the conclusion that Desire must inhere in a Substance) this leads to the inference that that Substance in which Desire inheres is the Self.

It is true that the fact of there being three kinds of Inference is sufficiently indicated by the enunciation of the three kinds, and hence the additional word '*frividham*,' 'it is of three kinds,' in the  $S\bar{a}fra$  could well have been left out;—but this additional curtailment of the  $S\bar{a}fra$  was not considered desirable by the author of the  $S\bar{a}fra$ , as he thought that he had secured sufficient conciseness in expressing by means of the short  $S\bar{a}fra$  the entire extent of the vast subject of Inference. This method of explanation—of being satisfied with one form of conciseness and not minding other possible forms—is often employed by the author of the  $S\bar{a}fra$ ; as we find in the case of his descriptions of the various kinds of ' $Siddh\bar{a}nfa$ ', 'Chhala', 'Shabda' and so forth.

[The difference between Perception and Inference is that] Perception pertains to things present, while Inference pertains to things present as well as not present (*i. e.* past and future) "How so?" As a matter of fact, Inference is applicable to all the three points of time: by means of Inference we apprehend things past, present and future: for instance, we infer (a) that 'such and such a thing will happen',—(b) that 'such and such a thing is present',—and also (c) that 'such and such a thing existed.' The past and the future are 'not present', [hence we speak of Inference as pertaining to the *present* as well as to the not-present]. VABTIKA ON INFERENCE.

[P. 46, line 1, to P. 60, line 7.]

'Atha tatpūrvakam trividhamanumānam'—says the Sūtra. The word 'atha' denotes sequence; and the word 'tatpūrvakam' is intended to be the definition of Inference; as it serves to distinguish Inference from what is like it (viz: the other forms of valid cognition) as well as what is unlike it (viz: invalid inference &c.).

The compound 'tatpurvakam' is to be expounded as' tani -ie-lat purvam yasya'. When we take the factor 'tani purvamyasya', the 'tani' in the plural, standing for all forms of valid cognition, it signifies that Inference is preceded byi. e. is based upon and proceeds from-all forms of valid cognition (so that the inference proceeding from Inference becomes included). [Nor does this go against the declaration of the Bhāsya that Inference proceeds from Perception as, whatever form of valid cognition may be the immediate antecedent of Inference.] Even so as a matter of fact, indirectly every Inference has ultimately to rely upon a Perception; and it is in view of this fact that the Bhasya speaks of Inference as 'preceded by Perception.' With a view to distinguish Inference from the other forms of valid cognition the word 'talpurvakam' has to be taken as implying a further qualification,-being expounded as '{e purve yasya'; i. e. 'that which is preceded by two perceptions';-- + so that Anumana or Inference, as the means of inferential cognition, comes to be defined as 'that Perception which is preceded by two perceptions.'1 "Which are these two percep-

<sup>•</sup> And not as '*fat purvam yasya*'; as this would mean 'that which is led up to, or preceded by, perception ; and this would not apply to those Inferences that proceed from other inferences, ; and it would become applicable to verbal cognitions, remembrances, doubts &c. also ; as these are all 'preceded by perception.'

<sup>+</sup> The Värika here makes, at the very outset, a distinction between Anumana as a form of cognition, and Anumana as a means of cognition. If this distinction is lost sight of, this and the following sentences of the Värika become unintelligible. The Värika refers all along to Anumana as the means of inferential cognition.

<sup>&</sup>lt;sup>‡</sup> Though this is a perception in reference to its own object (smoke), it is the cause of the *inferential* cognition of another object (fire).

tions?" The perception of the relation (of concomitance) between the probans and the probandum is the first, and that of the probans is the second. What happens in the case of Inferences is as follows :-- When the man, who is desirous of getting at inferential cognitions, perceives the probans a second time (i. e. after having had perceived it previously as concomitant with the probandum), this Perception arouses in his mind the impression left in his mind by the former perception, which leads him to remember (the relation between the probans and the probandum); and after this remembrance, when he again perceives the probane, this last perception, led up to by the former two perceptions and the subsequent remembrance, becomes the 'Anumana', or Means of Inferential Cognition, -- which is known by the name of ' Parāmarsha' [a name that is given to the perception of the probans as invariably concomitant with its probandum].

"What is the meaning of the word 'Anumāna' (by which Perception can be called 'anumāna')?"

The word 'anumāna' means anumīyaļē anēna, that by which something is inferred,—the affix having the force of the instrumental.

"What is the result that is brought about by its instrumentality?"

The result brought about is the cognition of the probandum, fire (for instance).

"How is it possible for the instrument (Perception), which pertains to one thing (the probans, smoke), to bring about the cognition of another thing (the probandum, fire)? How, for instance, can the instrument, pestle, which falls upon paddy, produce the thumping of the grains of shyāmāka"?

\* This reasoning is not very sound; there is no such fixed rule as that the resultant action must bear upon the same object upon which the instrument operates: as we find that the cutting instrument operating upon the tree. produces the action (of falling) in the parts of the tree (and not in the tree itself); what is out is the tree. while what falls (that on which the action of falling resulting from the cutting bears) is some part of the In some cases it is true that the resulting action tree. pertains to the same thing on which the instrument operates : for instance. the cooking pertains to the rice-grains, and the resultant action of being cooked (softened) also bears upon those same grains. In some cases again, the thing itself is the agent as well as the instrument, and the resulting action also bears upon the same ; for instance, when we speak of the tree as standing; it is by itself that the tree stands. " What do you mean by the tree standing by itself? " What it means is that in the action of standing the tree does not employ any other instrument. In the same manner, in some

<sup>•</sup> This is the answer given by an *Bkadiskin*. This view is refuted later on, Texs p. 47, line 4.

This happens when the resultant cognition itself is regarded as the 'pramāņa'; and thus what is led up to by this pramāņa is the acceptance or rejection of the object cognised. In this case the justrumental cognition and the resulting acceptance, etc., both bear upon the same object.

The above explanation given by the Ekadeshin is not right; for as a matter of fact, we do not admit of any difference between the objects of the 'Instrument of Cognition' and that of the result led up to by that instrument. [And this leaves no ground for the raising of the objection, to which the Ekadeshin has offered the above answer].

[Hitherto the Varie ka has confined itself to that interpretation of the word ' $iai p \overline{u} rvakam$ ', in which 'iai' has been taken as standing for  $i\overline{u}ni$  (all forms of valid cognition) and  $i\overline{e}$  (the two perceptions represented by the two premises); it now takes up the interpretation whereby 'iai' stands for  $i\overline{u}ni$ ', as before, and 'iai' in the singular].

When we take ' $iaip \bar{u}rvakam$ ' as ' $iaip \bar{u}rvam$  yasya', 'that which is preceded by one perception',—then we have to disregard the distinction (that we have made above, between the perception of the probans on the one hand, and the perception of the relation between the probans and the probandum on the other); and then what happens is that the Parāmarsha of the probans (the recognition of its invariable concomitance with the probandum, which is Anumāna, the Means of Inferential Cognition) comes to represent and imply—(a) the perception of the relation between the probans, \*and (c) the remembrance of the relation perceived before; as it is this that is really the ' $iaip \bar{u}rvaka'$ , 'preceded by perception of the probans.'\*

"What is it that is inferentially cognised (inferred) by means of these (as implied by the *Parāmarsha*)?"

<sup>•</sup> The *Tātparya* reads no anusvāra over ntara in line 7; it takes the whole as one compound.

<sup>+</sup> The difference of this from the former interpretation lies in the fact that in this case there is only one perception of the probane; while in the former case there were two.

That which is over and above (what has been cognised by Perception) is what is cognised by Inference—[*i. e.* of the two members of the *Parāmarsha*, the *probans* and the *proban*dum, the probans is perceived, and the remaining member, the probandum, is what is inferred].

"What is the force of the affix in the word 'Anumana,' 'Inference'?"

It may be taken as having either a reflexive or an instrumental signification [i. e. (a) the word 'Anumāna' may stand for 'anumiți', or inferential cognition itself, in which case the lyut affix will have the sense of the reflexive; (b) or it may stand for 'anumīyațē anēna', that by means of which the inferential cognition is got at, in which case the affix has the force of the instrumental.] [The only difference would be that] in case the affix has the reflexive sense, the result of the Anumāna would be in the form of the rejection or acceptance of the object inferred; while if it has the force of the instrumental, then the result lies in the cognition of the 'remaining factor' (i. e. the probandum).

•Now then there arises the question—What is 'anumana,' the means (the direct instrument) of Inferential Cognition ? Is it the remembrance of the relation between the probans and the probandum ? or the perception of the probans ?

Several answers have been given to this question :--(a) Some people explain that it is the remembrance of the relation between the probans and probandum that constitutes the Means of Inferential Cognition;--(b) while others would take this remembrance as the means, but only in so far as it is aided by the perception of the relation of the probans and the probandum and such other factors;--(c) a third party holds the linga-parāmarsha (the recognition of the probans as invariably concomitant with the probandum) to be the means of inferential cognition ;--(d)

<sup>•</sup> What gives rise to the question is the fact that both, the remembrance and the perception, are fatpfirman and the cause of inferential cognition.

but in our opinion all these factors (mentioned by others) constitute the *Anumāna*; as they are all equally necessary for Inferential Cognition; and when we come to consider the relative importance of the factors mentioned, it seems only reasonable to regard the *linga-parāmarsha* as the most important.

"What is the reuson that makes this view 'reasonable'?"

The reason lies in the recognition of immediate sequence : As a matter of fact, we find that the Inferential Cognition of the probandum follows immediately after the linga-paramarsha; and from this it naturally follows that this parāmarsha is what should be regarded as the means. The remembrance (of the relation between the probans and the probandum), on the other hand, cannot be regarded as the most predominant factor. "Why?" Simply because the remembrance is not immediately followed by Inferential Cognition ;-for instance, when we infer the presence of fire from smoke, it is not right to say that the conclusion, embodying the cognition of the probandum, -- ' there is fire'--follows immediately after the observer's remembrance.---'where I perceived smoke I found fire'. Hence it is only right to hold that what brings about the required Inferential Cognition is the linga-paramarsha as aided by the said remembrance.

It is only thus that the Upanaya, or 'Application of the Probans to the subjectin question,'(e.g. 'this mountain contains smoke which is invariably concomitant with fire) becomes a necessary factor in the inferential process; that is to say, the Upanaya can be regarded as a necessary factor in the process onlywhen the linga-parāmarsha aided by the remembrance (of the relation between the probans and the probandum) is regarded as the means of Inferential Cognition ; and thus alone does the Upanaya come to be recognised as an essential part of the statement of the Inference. Thus then it is established that Anumana is 'latparvaka', as declared in the  $S\bar{u}lra$ .

# An objection is raised :---

"If Anumana is defined as that which is preceded by Perception, then the definition becomes applicable to *Faculty* (Sanskāra) and Demonstrated Truth (Nirnaya) also (and therefore it becomes too wide); for certainly that Faculty which brings about remembrance, and which has been called "Bhāvanā" or Impression' is certainly preceded by Perception; and so also Demonstrated Truth (which, in the case of perceptional cognition, would be preceded by Perception); and thus by the definition proposed, both of these would come under 'Inference'."

The definition is not open to this objection, we reply. Because what is meant to be defined is a form of Cognition : that every one of these definitions (of Pramanas) pertains to a form of Cognition is clear from the definition of Perception. wherein it is distinctly stated that Perception is 'a cognition produced by the contact of the sense-organ with the object'; and hence the definition cannot apply to Impression (as an Impression is not a Cognition). Then as regards Demonstrated Truth, it partakes of the nature of both : sometimes it is a means of cognition, and sometimes the result of cognition ; when it is in the form of the cognition of a thingaffording an idea of that thing-then it is only a result (led up to by a means of cognition ; and in this case, it is not a Pramana, and as such, cannot be included in the definition of Inference); when however it leads to the further cognition of something else, it does become a Means of Cognition, a Pramana [and in that case, there is nothing wrong in its being included in the definition]

Inference is of three kinds-says the Safra. That is to say, (1) The Universal Affirmative, (2) The Universal Negative and (3) The Universal Affirmative-Negative. Of these the last, (3) the Universal Affirmative-Negative is that in which the Probans, while subsisting in the Subject and other objects akin to it (wherein the Probandum resides), subsists in those where the Probandum is known to reside ; e, g. the Inference, 'Sound is transient,-because while belonging to a generality and being possessed of specified individuality, it is perceived by the external organ of ordinary human beings like ourselves,-like the ordinary jar. ' \* (1) The Universal Affirmative is that in which the Probans subsists in the Subject and other objects akin to it, and (is of such a universal character that) there is, in regard to it, no object in which the Probandum is known to be absent ;--e. g., twhen the philosopher (the Bauddha for instance), who holds all things to be transient, brings forward the reasoning --- 'Sound is transient,---because it is a product',---where there is no object in which the Probandum, transient character, does not exist. (2) The Universal Negative is that in which the Probans Subsists in the Subject,-in whose case there is nothing (apart from the Subject) in which the Probandum is known to be present,-and which does not subsist in any object where the Probandum is known to be absent;-e. g., ‡ 'the living body is not soul-less,-as if it were were soulless, it would be lifeless'.

Downloaded from https://www.holybooks.com

<sup>•</sup> In this, the character of Sound, on which the whole reasoning is based, is one that subsists in Sound, and things akin to it, like the Jar and other ordinary things; and it is not present in any non-transient thing, in *akdsha*, for instance.

 $<sup>\</sup>dagger$  An example of this inference, from the author's own stand-point, would be— 'the specific individuality of things is something that can be spoken of because it is knowable, like the generality of things '—*Tātparya*.

<sup>1</sup> In this case a 'sapakşa'—'that where the probandum is known to be present' is not possible ; as the probandum is ' negation of soullesences'; and this cannot be present anywhere else except the *living body*, which i. already the Subject.

We may explain the 'three kinds' of Inference un another manner :----- ' Inference is of three kinds-(1) the Purvavat, (2) the 'Shesavat and (3) the Sumanyatodrista'- says the Sūtra. (1) In the word 'pūrvavat', the word 'pūrva' refers to the Probandum; hence the 'purvavat', 'having the purva', is that which (invariably) has the Probandum for its substrate. (2) In the word ' $sh\bar{e}savat$ ' the word 'sheea' stands for the Probandum and other things akin to it; and that which has these (the Probandum as well as other things akin to it) for its constant substrate is the 'Shesavat.' Thus the difference between the Purvavat and the Shēsavat lies in this that, while the former is invariably concomitant with the Probandum only, the latter is invariably concomitant also with other things akin to the Probandum. (3) The 'Sāmānyatodrista' is that which is not seen in common (i. e. which is found nowhere except in the Subject); and the particle 'cha' (at the end of the  $S\bar{u}/ra$ ) qualifying this last word 'Sāmānyaļodristam' signifies the fact that this inference should not be contrary either to the Scriptures or to any fact of ordinary perception. Of these, the first two kinds of Inference are distinguished by four characteristics, while the third is marked by five distinctive features.\*

There is another explanation of the 'three kinds' of Inference, the Pūrvavat, the Shēşavat and the Sūmūnyatodrista, proposed by the Bhāşya (p. 18, l. 3); the Pūrvavat is that in which the effect is inferred from the cause, says the Bhūşya.

• The three kinds of Inference herein indicated are thus explained by the *Talparya*—The *Parwavaț* is that which is not sublated and which is not neutralised and which is concomitant with the probandum. These three features are common to all inferences,—which are classed under the following three heads:—(1) the *Shişavaț*, that which subsists in the probandum and things akin to it (this being the *fourth* feature of this kind of inference),—(2) the *Saminyafcdrista*, not seen anywhere else except in the Bubject (this being the fourth feature in this second kind),—(3) the *Shişavaf-Samanafedrista* which combines the features of the last two (and is thus possessed of two characters in addition to two atoresaid three common features) An objection is raised against the *Bhāṣya*:—" What is meant by the assertion that the effect is inferred from the cause?

Vār. Page 47. (a) If it means that, on seeing the cause one cognises the presence of the effect,—then this is not

true: No man in his senses is ever found to cognise the effect on seeing the cause ; and thus the assertion becomes contrary to fact. (b) If it be meant that the inferential cognition is in the form - 'Where the cause, there the effect is',-then this also is not true : because as a matter of fact the Cause and the Effect always occupy different points in space, inhering in different substrates; e. g. the yarns (the cause of cloth) inhere in the component fibres, while the cloth inheres in the varns. Then again, by saying that 'the Effect is inferred from the perception of the Cause', you run counter to the very essence of Inference. 'What is this essence of Inference?' Tt consists in the fact that no reasoning ever operates in regard to either what is not known or what is fully known; and if the Effect were inferred from the perception of the Cause,this inference (which is a process of reasoning) would operate upon what is not known [the effect being not known prior to the inference; and this would make the Inference invalid by reason of its probans being ' baseless', āshrayāsiddha]. And thus there would be a contradiction or annulment of the whole fabric of Inference."

We cannot accept the force of the above reasoning; for the simple reason that we do not accept the assertions against which the reasoning is aimed. (a) In the first place, who says that 'the presence of the Effect is inferred from the perception of the Cause'? (b) Secondly, what person has ever asserted that 'the Effect is there where the Cause is'? What the Sūtra actually means is that, what is inferred is the Effect as the qualifying adjunct of the Cause; and in this there is no 'running counter to the essence of Inference'.

<sup>•</sup> As the Cause is already known ; and what is inferred is only an adjunct of the Cause ; and thus the Cause afford: the necessary substratum for the Probans.

The same explanation applies to the case of the Shēşavaf Inferencealso: In the Shēşavaf inference also what is inferred is the Cause as the adjunct of the Effect.

"How can the word 'Shess' in the word Shesavat' mean Effect?"

The fact is that both Cause and Effect have been indicated as the instrument of inferential cognition;—and the instrumentality of the Cause has been already utilised in the  $P\bar{u}rva$ vat Inference;—hence of the two, the *Effect* is the only factor that remains behind as the one whose instrumentality has not yet been utilised;—and it is thus that the Effect comes to be spoken of as 'shēşa' ('what remains behind ').

As an example of the inference of the effect from the cause, the *Bhāṣya* cites the case where that 'there will be rain' is inferred from the sight of the rising clouds. 'In what form would this inference be stated?' In the following form—'These clouds will bring rain,—because they are rising, being, as they are, accompanied by deep rumbling, having many lines of cranes flying through them, flashing with lightning—just like other rain-clouds perceived in the past.'

The case of the rise of water in the stream (leading to the inference of the rain that has caused it) is an example of the Shēsavat Inference. Against this an objection is raised :---"How can the rise of water, which is in the stream, bring about the inferential cognition of rain in regions above the stream, --- the two being in totally different places ?" The rise in the river is not the instrument leading to the inferential cognition of rain in regions above the river; what happens is that by means of the rise, which is a quality of the river. we infer the connection of the river itself with some place towhrds its source, where rain must have fallen; \* the inference being stated in the following form :-- 'This Var. Page 50. river must be connected with some place towards its source, where rain has fallen,-because its flow

"So that both pertain to the river itself.

is quick, pieces of wood are floating along by reason of the rise, and the river is full,—just like the river that is full when there is rain.'

\* In stating the conclusion of this inference we might make use of any tense we like,—it being possible to speak of the rain as coming in the future, or as having been in the past (or as being present at the time).

 $\dagger$  The third kind of Inference, the Samanyatodrista, is that in which an object is cognised as qualified by a character which is an invariable concomitant of a well-known character of that object, the former character being independent of the notion of cause and effect;  $\ddagger e. g.$  the presence of water is inferred from the presence of cranes. "In what manner do you get at the inferential cognition of water from the cranes?" In this case we take as the *paksa*, (the *Subject* of inference), the tree and other things along with

\*At the time that we notice the rise in the river, the rain that caused it may have ceased, in which case the past tense would be used; the rain may be still going on, when the present tense would be right; or it may be possible for the rain to continue for sometime longer, when the use of the future tense would not be wrong. Therefore, so far as the example is concerned, it does not matter what tense is used; it is enough that the perception of the effect leads to the inference of the cause. The *Bhayya* has made use of the past tense; as there is always a certainty as to the rain having gone *before* the river rises; and the present and future would, at best, be only doubtful.

<sup>†</sup> The example of Sāmānyaţoḍrişta Inference given in the Bhāṣya is difficult to comprehend; hence, not satisfied by the explanation there given, the author of the Vārţika supplies another explanation and cites another example. *Tāţparya*.

<sup>‡</sup> The same object as qualified by the well-known character becomes, in this case the instrument of inference; and qualified by the other character, it becomes the object of inference. The principal point of difference between this and the other two kinds of inference is that in this case, the relation of cause and effect does not enter at all. The expression 'Sāmānyaţodrista' is thus explained by the Tāţparya:--'Sāmānyāna'-avinābhāvnāā hāţunā-laksitam-' dristam '-dharmirāpam' anunānam. In the example, the place known as with cranes is the means of the inference of the place as with water. the spot which is well-known as constantly inhabited by cranes and with regard to that spot we infer the presence of water.\*

 $\dagger$  Some people take the *Bhāṣya* to mean that we have a case of Sāmānyatodrista Inference when we infer the movement of the Sun. But we do not understand this. Tn what manner is the movement inferred ? If the inference is in the form 'the sun is mobile,'-the object inferred being the sun's movement,-then we ask: by what means is the movement cognised? There is no inferential indicative that has ever been perceived as concomitant with either the Sun or its motion (all cases of the concomitance of motion with change of position being noticed elsewhere than in the case of the Sun); and it is not possible to infer a thing that has not been found to be so concomitant; otherwise (if even non-concomitant things were to be inferred, then) anything could be inferred from anything (without any restriction). If it be urged that the change of position would form the requisite inferential indicative, our answer is that this is not possible; as the change of the Sun's position is not actually perceived; no one ever sees with his eves the Sun's going from one place to another; as the 'other place' to which the Sungees must be either the  $\overline{A}k\overline{a}sha$  or some point in space; and both of these  $-\bar{A}k\bar{a}sha$  and Space are imperceptible; and there is no other way of perceiving them; hence it is not right to assert that there is the perception of Sun's going from one place to another; specially as in all cases what is actually seen of the Sun is only the solar disc; and it is not right to draw an inference from the perception of a thing merely by itself. Even if the movement of the

<sup>&</sup>lt;sup>•</sup> The reading ' baldkdvaffvēna ' appears to be a misprint ; as the inference is of the place as with water ; the presence of cranes being the means by which that inference is got at. 'Salibraffvena ' appears to be the correct reading.

<sup>†</sup> The Variate now takes up the example cited in the Bhayya; criticises its apparent meaning; and then, on the top of page 51, points out in what sense the assertion of the Bhayya may be accepted as right.

Sun were somehow capable of being perceived,-being, as it is, something that has the capacity of being perceived, -yet the Sun's reaching of another point in space could never be perceptible; as Space is something that is eternal and super-sensuous, and, as a matter of fact, the conjunction of two things (Sun and Point in Space)-one of which (the is perceptible and the other (Space) imperceptible Sun) -----cannot be perceived [and the Sun's getting from one point to another is nothing more than its conjunction with a point in space]. If what you mean is that from seeing the getting to another place by Divadatta (only when he moves) you infer the movement of the Sun-and this inference is the Samanyatodrista, then, an inference of this kind would be of the movement, of not the Sun only, but of

Vār. page 51.

all things; and why, in that case, should it not be inferred that you also are moving?

The answer to the above objection against the Bhāşya is that, as a matter of fact, we do not infer the movement of the Sun directly; what happens is that in the first place we infer the fact of the Sun getting at another point in space; and then from this latter fact, we infer the movement of the Sun; and there is nothing incongruous in this. The form of the inference is as follows:—' The Sun gets at another point in space,—because, while being a substance, and never conceived of as undergoing decrease or increase, and found towards the East, it is yet perceived and conceived of as being in front of the observer, when he turns round, without moving a single step \*,—just as is found to be the case with genus and other things;—genus and other things are found to satisfy all the said conditions, and they, as such, are found to have got from one place to another ;—similarly the

<sup>•</sup> The observer has seen the sun in the East ; after some time, he turns round, without moving away from the original place, and he finds the sun in his front again,—*i. e.* towards the West. This proves that the sun has changed its position.

Sun satisfies all those conditions :—so that the Sun must be regarded as having got from one place to another.' This getting from one place to another having been thus inferred, from that we infer the movement of the Sun. The inference of the Sun's getting from one place to another may be stated in another form, as follows :—' The Sun must be regarded as getting from one place to another,—because when the observer has seen the Sun in one place, if he does not move his eyes from that point, he fails, after some time, to see the Sun, even when there appears nothing to obstruct the range of his vision,—just as is found to be in the case of Devadatta (when he gets from one place to another).'

Some people meet the aforesaid objection against the Bh $\partial$ sya by arguing that Space is perceptible; and in support of this, they put forward the following inference :— 'Space is perceptible,—because it is pointed at and indicated by means of the finger—like the Moon.' But it is not right to argue thus; as Space is without colour; and being colourless, how could it be perceived by any external sense-organ?

"How then is it found to be indicated by means of the finger ?" What is actually indicated as 'Space' by the finger is (not the Space but) trees and such other things connected with the points in Space ;- trees and other things are connected with definite points in space; and it is these that are figuratively spoken of and indicated as 'Space.' What really happens is this :--- A certain point in space happening to be perceived along with the (rising) sun, the name 'East' comes to be applied to that point in space which is thus connected with the Sun; and then when any other thing, a tree for instance, is perceived along with the rising Sun, this other thing also comes to be spoken of as the 'East': and when people indicate the 'East' with their finger, they do so with reference to the tree and such other things, to which the name is applied indirectly or figuratively.

Or, when the Sutra speaks of Inference as being 'of three kinds', what it refers to is the fact of the Inferential Indicative or Probans being—(a) well-known, (b) true, and (c) certain; —the 'well-known' Probans being that which is concomitant with the Subject; the 'true' that which subsists in other things of the same kind (i. e., in which the Probandum is known to be present); and 'certain' that which is never found apart from things of the same kind.

Or, the mention of 'three kinds' may be taken as restricting the number of Inferences ;- the sense being that all the various kinds of Inference are included under the three that are specified-viz; the 'Parvavat', the 'Shesavat' and the 'Sāmānyatodrista'. "In what way can Inference be spoken of as being 'of various kinds'?" In the following manner, we reply :--- (I) The Affirmative-Negative Inference is of two kinds- \* (a) that of which the is always present Probans in things where the Probandum is known to be present, and that which is present as well as absent in such things;--(II) The Universal Affirmative Inference also is of the same two kinds ;- (III) and the Universal Negative Inference is of one kind only; as in this case we cannot have any such thing in which the Probandum is known to be present; -then again, these five kinds of Inference come to be of fi/teen kinds, according as each of them pertains to the past, the present or the future; ----these fifteen again come to be sixty, according as they become addressed to the four kinds of persons Vār. page 52. (one who already accepts the conclusion, one who does not accept the conclusion, one who is doubtful on the point, and one who accepts the contrary of the conclusion);--of these again there are endless sub-divisions. Thus there being

<sup>• (</sup>a) E. g. 'Sound is transient, because it is a product', where the character of product is one that is always present in all transient things. (b) 'Sound is transient because it is inseparable from our effort'—where of transient things, while some are inseparable from our effort, others are not so.

endless sub-divisions of Inference, all these become included in the 'three kinds'; hence it is with a view to this restriction that the Safra speaks of the 'three kinds'.

The first kind of Inference has been called 'Purvavat'; with regard to this name a question is raised—"What is it that is Purvavat? The cause or the effect? If the word 'Purtavat' means that which has a purva or antecedent, then it is the effect that must be the 'Purvavat'; and in that case it becomes a contradiction in terms to assert that the PurvavatInference is the inference of the effect from the cause." We do hold that the word 'purvavat' means that which has a purva or antecedent; but we do not hold that it must be the effect that is so; we apply the name to the cognition; and the cognition is certainly 'that which has the antecedent', for its object; and thus what our meaning is is that from the cognition of the antecedent, i. e., the cause, follows the inference of the effect. Similarly the name 'Shēşavat' applies to the cognition of that which comes after, and so on.

Or (as the *Bhāṣya* points out on pp. 18-19) the affix in the word '*Pārvavaț*' may be taken as '*vați*', denoting similarity (and not as the possessive '*mațup*')—; the meaning being that exactly as one has perceived the thing by means of Senseperception, so also does he cognise the same thing by means of Inference; and thus by means of Inference the thing becomes cognised as before,  $p\bar{u}rvavaț$ '.

Of the sentence 'yathā  $dh\bar{u}mn\bar{a}gnih$ ' (Bhāṣya, p. 19, l. 2) several explanations have been given. The question that arises is—what is it that is cognised by means of the smoke? (a) Is it the fire? (b) Or the particular place where fire is ? (c) Or the existence (of fire)? (d) \* Or the particular place along with (containing) the fire? (a) It cannot be that the fire is cognised; as between fire and smoke, the relation of *dharma* 

<sup>• (</sup>d) Is the position adopted by Dinnaga after rejecting the former three views.

(quality) and *dharmin* (qualified) is not *possible*; as neither the fire is the quality of the smoke, nor the smoke of the fire; and further, inasmuch the fire is something already known (in the premises, as concomitant with smoke), it does not stand in need of being inferred, and hence cannot rightly be regarded as an 'object of inference'. The same reasoning discards the view that what is inferred is existence (c) and also that it is the particular place that is inferred (b), - both existence and place being already known (before the inference). (d) If then, it be held that it is the place along with the fire that is inferred, - this also cannot be right, because smoke is not a quality of that place. What we mean is that it will not be right to accept the view (held by Dinnaga) that what is inferred by means of smoke is the place as containing the fire. "Why not?" Because smoke is not a quality of the place containing fire; and then again, as for the relation of fire to any place, such relation is not unknown (and as such, it cannot be an object of Inference). "The inference is in the form, 'this place contains fire',-wherein what is inferred is a particular place as containing fire, and not mere place in general." This also is not right; as the actual place is never perceived, under your theory; the man who puts forward the aforesaid contention (viz. the Bauddha writer, Dinnaga) never actually sees the place; and hence if he asserts the conclusion in the form ' this place contains fire ', he makes an empty meaningless assertion; \* specially because mere smoke (unperceived)

<sup>6</sup> The view here controverted here is Dinnägs's. See *Medieval Logic*, p. 87. The question arises as to the exact nature of the Probandum . Is it any place in general containing fire? Or that particular place which contains smoke? In the former ase the *smoke*, which is the probans would not be a necessary quality or concomitant of any and every place that may have the fire; and further, some place or other that contains fire must be already known; hence the Probandum could not be in this unspecified form: as regards the second alternative, the objectionable feature is that the actual place from where the smoke is issuing is not seen by the observer; as according to the Bauddha what is seen is not any perceptible

cannot bring about the cognition of fire, and the Bauddha philosopher can never perceive the smoke (which, like everything else, is imperceptible) ;---for these reasons any particular place cannot be regarded as the object of "But as a matter of fact the Inference. smoke does bring about the cognition of fire, by reason of its invariable concomitance with it." Well. what you mean is simply this that there is an -invariable concomitance between smoke and fire, and on that account when one sees smoke he naturally apprehends the presence of fire ;---if this is what you mean, we cannot accept it as true; as this assertion of yours will not bear the scrutiny of the several alternative interpretations of which it is capable : For instance, what do you mean by 'the invariable concomitance between smoke and fire'? (a) Does it mean that the two are related to each other as cause and effect? (b) Or that the two are related by the relation of 'inherence of the same object' ? (c) Or by mere relationship in general? " WA accept the first of these alternatives : the invariable concomitance of smoke with fire lies in the fact of the one being the cause of the other." This cannot be. we reply; as they do not inhere in each other \* : the smoke does not inhere in the fire, nor the fire in the smoke; in fact each of them inheres in its own particular cause (which is neither fire nor smoke); thus the 'invariable' concomitance' cannot consist of the relation of cause and effect. (b) Nor can it consist of 'inherence of

gross! substance,—mountain *e. g.*—but the mountain, like everything else, is only atoms, which are all imperceptible; and for the same reason, the smoke also cannot, according to the Bauddha, be perceived. So much for the Bauddha possibilities; but jeven for those who do admit of gross substances, when one sees the smoke moving in the sky, it is quite possible that he may not see the actual place from where it issues.

• If 'invariable concomitance' is the \_relation of cause and effect then it must be the relation between the effect and its material cause, in which it

Downloaded from https://www.holybooks.com

the same object'. \* Because (1) there is no single object produced by both fire and smoke [i. e. of which both, are the material cause 'and which, as such, would inhere in both, and would form the basis of Smoke and Fire being related to each other by the relation of 'inherence of the same object']; specially as no object is ever produced out of two entirely heterogeneous material causes. (2) Nor are Smoke and Fire ever found to subsist in any single object, as each of them subsists in its own particular material cause, as we have already pointed out. [And thus this second form of 'inherence of the same object' ;s not possible between smoke and fire]. (c) All then that we find thus is that there is some sort of relationship (in general) between smoke and fire ;--but even this cannot be rightly inferred. "Why 80 ? " Well, if the inference (premiss) were put forward in the form-' there is some (permanent) relation between smoke and fire ',---this would not be true; as no such (permanent) relationship is really known (at the time of the inference); in fact the smoke is actually perceived even in the absence of fire (as when one sees smoke issuing from the hill-side and he does not see the fire). "Certainly there would be some sort companionship (or concomitance), as there is in the case of Colour and Touch." That also is not possible; as the two are not always found together: we have often seen smoke without fire, as well as fire without smoke; and as thus the two are seen

inheres i. c. subsists by samaväyasambandha ; because there is no such concomitance of the effect with the non-material cause—the cloth being present also when the contact of the loom is not present ; nor is there such concomitance of the effect with its Instrumental cause,—the cloth is not always accompanied by the Weaver. Thus the refutation emphasises the absence of the relation by inherence, samaväyasambandha, between smoke and fire.

• 'Inherence of the same object' may mean-(1) that some one object inheres in both; or (2) that both inhere in some one object. The first refutation meets (1)—the (2) being taken up a few lines below. apart from each other, there can be no constant companionship between them. This same reasoning also serves to reject the inference in the form-'wherever there is smoke there is fire' as this also postulates a form of companionship between smoke and fire]. Thus then, there being no other way in which this could be explained, the conclusion is that fire is not inferred by means of smoke. "But this would go directly against a fact accepted by all men : if there were no inference of fire by means of smoke, then a universally recognised fact would be contradicted." There is no such contradiction; \* as what really happens (in the case of the universally recognised inference of fire) is that by seeing certain peculiarities of smoke we infer the presence of smoke as qualified (accompanied) by fire. "In what way does fire become a qualification of smoke?" Simply because the fire is subordinate to the smoke,as what is inferred is 'this smoke as accompanied by fire'; and this is inferred by means of certain specific peculiarities of the smoke; at the time of inference we perceive

both—the smoke as well as its pecularities, in the shape of the continuity of its upward rising volume and so forth; and what these peculiarities, as belonging to the smoke, lead us to infer is some such qualification of smoke sa is not already known; as it is a fact Vār. PAGE 54. noticed in the case of all inferences, that all those peculiar qualifications of the object inferred that are already known serve as the means of

• In a case where we see the smoke rising close to us, we certainly infer the place as characterised by smoke, (and from that, the fire) as the popular belief is But in a case where a large mass of smoke is seen issuing from a place that is too far to be perceived, we do not take the trouble of finding out the means of cognising the place; and what we infer, in this case, is the smoke itself which is seen as accompanied by fire; and this inference is led up to by the peculiarities that we perceive in the smoke,—e.g. its rising upwards in a continuous line, and so forth. '—Tálparya

Downloaded from https://www.holybooks.com

bringing about the cognition of that thing; e.g. in the case of Sound, its two peculiarities—that it is an *entity* and a *product*—are well-known; and what is not known is its further peculiarity of *non-eternality*; hence when we infer the Sound, we infer it as qualified by its (hitherto unknown) *non-eternality*.

(B.) Says the Bhāşya—The word 'Shēşavaţ' means 'remainder' (p. 19, 1. 2); -and later on it adds—'Sound' is not an action because it is the originator of another Sound (p. 19, 1. 9);—and against this last assertion, the following objection is raised:—"The Probans, in this inference, is too exclusive, being absent both in the Probandum and its contrary; that is to say, the character of being the originator of another Sound is one that is not found either in Action or in what is not-action [Hence the said character cannot prove the fact of sound being not-action]."

This objection is not sound; as the  $Bh\bar{a}sya$  means something entirely different (from what has been objected to): What is meant by the phrase 'it is the originator of another sound 'is that 'it is the orginator of a homogeneous thing'; and thus (this latter character being present in what is *not-action*) the inference is not open to the objection that has been urged.

[C] In regard to the Simānyaļodrista Inference, the Bhāsya (p. 19, 1. 6) says—'The Sāmānyaļodrista Inference is that in which the relation between the Probans and the Probandum being imperceptible §c. §c.' Against this the following objection is raised:—"What is meant by the relation of the Probans and the Probandum being imperceptible? Does it mean that it is not perceived at the time that the inference is drawn? or that it is never perceived? If the former, then, inasmuch as in all inferences the said relation is not perceived at the time of the inference, the qualification becomes useless [as it does not distinguish the  $S\bar{a}m\bar{a}nya$  to drist from the other kinds of Inference]. If then, it means that the relation is *never* perceived, then in the first place how can any Inference proceed in such a case (where the relation has never been perceived)? And secondly, the assertion would be directly opposed to what the *Bhāşya* (p. 3, 1.8) has asserted as to impossibility of Inference applying to such things as have been never perceived or to those that are already well known."

This objection cannot be maintained; because what is inferred is not fire by itself (which of course is perceptible), but fire as the qualification (or accompaniment, of smoke); and certainly the fire as such is not perceived (at the time) and has got to be inferred.

Thus then, the Sāmānyatodrista Inference is that which, from the perception of a certain property of an object. leads to the cognition of that object; e. g. when Desire, Aversion, &c., are inferred as belonging to the Self, Desire &c., are the 'object' (inferred), and the Self as qualifying them becomes the secondary factor; and in this the 'property of Desire &c. that is perceived is their character of belonging to the Self; and the perception of this character leads to the inference of those 'objects' (Desire &c.) as belonging to (qualified, or accompanied, by) the Self; and the inference is in the following form :- " Desire &c. are dependent upon (belong to) something else,-because they are qualities-like "All that this Inforence leads us to cognise Colour.' is the fact that Desire &c., belong to something else; --- whence do you get at the conclusion that they belong to the Self?" We get at this latter conclusion by means of elimination: That is to say, first of all we know that Desire &c., cannot belong to Earth and other similar substances, because they can be perceived only by the Self (i.e. the person that draws the infer-

once), and are not perceived by means of any external senseorgan; in the case of qualities belonging to Earth and other similar substances, we find that they can be perceived by the person that draws the inference as well as other persons : and that they are perceived by means of external organs of perception; Desire and the rest. on the other hand. are such as are perceived only by the cognising Self, and that also only by means of the internal organ, of perception; and this proves that these cannot belong to Earth, or Water or Fire or Air or Akāsha, -Secondly, we also know that they cannot belong to Space, Time and Mind, because like these three substances themselves their qualities also are incapable of being perceived by the organs of perception. - Apart from these eight substances, there is no other substance except the Self ;---and hence the only possible conclusion is that Desire and the rest must belong to the Self.

"Perception pertains to things present, while Inference Var. p. 55. pertains to things present as well as not-present" —says the Bhāṣya [p. 20, ll. 3-2]. Against this the following objection is raised:—" Is this distinction based upon the difference of the qualifying adjuncts or that of the qualified objects? If the latter, then, the difficulty is that there can be no Inference with reference to objects that are not-present; for as it has already been explained, Inference never operates upon a thing which is not already " cognised in a general or vague manner,—and no such vague or general cognition is possible with regard (independently) to things that are not-present. If, on the other hand, you mean the distinction to the based upon the difference in the qualifying

<sup>&</sup>lt;sup>9</sup> Inference applies to things that are known in a vague form, but of which there is no well-defined cognition; and never with regard to things absolutely unknown.

adjuncts,—then we urge the following points:—There are three kinds of qualifying adjuncts—(a) those that are affirmed, (b) those that are denied, and (c) those that are self-sufficient (or self-contained); as an example of (a) there is 'odorousness' which is asserted of the Earth; of (b) the same 'odorousness' as denied of substances other than the Earth; and of (c) there is the relation of 'inherence' subsisting between things thus inherently related.

"A question is raised in regard to the relation of Inherence :---How can ' Inherence ' be regarded as ' self-sufficient '? The answer is-because there is no further 'inherence' (by which the former 'Inherence' should subsist in the inherent things); as whenever one thing subsists in another, it does so through some relation; and as a matter of fact. for Inherence there is no further inherence that could be the relation (through which the former could subsist in the inherent things). -If there were such further Inherence of the former Inherence, there would be no end to the assumption of such Inherences ; and if there were to be a limit somewhere to these assumptions, it would be best to have the limit at the very first Inherence (and make it, at the very outset, self-sufficient, independent of further functions and relations). 'This assertion that Inherence is self-sufficient-is it to be accepted on trust ? or is there any reasoning in support of Undoubtedly, there is reasoning; the reasoning it P being as follows-(1) Inherence is not-dependent (is selfsufficient), being as it is, denoted by a word expressive of the relation that subsists in the five categories\*,-just like the Atom (which is regarded as self-sufficient, because it is spoken of as subsisting in the five categories) +;---or again

† The translation follows the interpretation of the Tdfparya, which says that the compound 'pafichapadarfhavriffi' is to be taken as Bahurrihi, when applying to the

<sup>\*</sup> Substance, Quality, Action, Generality and Specific Individuality.

(2) because while being present everywhere, it gives rise to the conception of things being 'here, in this',-just like the Self. 'If Inherence were dependent on something else (and not self-sufficient), what would happen?' Tn that case Products would have no substratum at If Inherence were 'dependent', it 'How so?' я]], could be dependent on the Product, and as such could not exist before the Product came into existence; so that at the time that the Product comes into existence, it would be without a substratum until the Inherence comes into it (by virtue of which Inherence it would have the Cause for its substratum);---it is well-known that Inherence subsists in the Cause and its Product [and hence if it is to be dependent upon contained in these, it cannot exist before the Product appears]; and it is necessary to determine the relation (or form) in which it subsists in them; as we find that whenever one thing subsists in another, it does so in some particular form or relation. 'Being a kind of approach or contact, Inherence subsists in the same form as Conjunc-This cannot be, we reply; as it involves a contion'. tradiction. When you assert that 'the contact, or conjunction subsists', do you mean this (subsistence) to be a property of the Contact (in which the contact subsists)? or of the Product ? We would say that it is a property of the Product, and not of the Contact; and it is only in that case that there being other Products also to which that contact belongs (those endless products, namely, into which every product goes on momentarily changing) [the Inherence could belong to all these momentarily varying phases of the

Atom, and as 'Genitive *Tatpurses* when applying to the Inherence; and goes on to point out that it is in view of this flaw in the reasoning that the second reasoning is given.

It however appears possible to take the clause to mean—'because it is spoken of as subsisting in the five categories'—a fact that would be true alike with regard to the Atom and the Inherence.

Product.)\*. On the other hand, if the *cubsistence* were a property of the Contact, then this contact would stand in need of a further contact (in order to establish the relation of Inherence with the further phase of the Product); and so on and on, there would be an endless series of assumptions;

Vār: P.56. for the Contact also will have some sort of subsistence (form of existence); and this, on

your supposition, is a property of the Contact; and this endless assumption would be highly objectionable; specially as no one can justify it, in view of the fact that there is no authority or valid proof for it. † [Thus then, it is proved that the subsistence of Inherence cannot be of the nature of If then, you were to assert that Inherence subcontact.] sists through another Inherence, you would contradict the tenets of the Shāstra; which declares that the nature of Inherence is explained by its mere esse or presence (which denies more than one Inherence). 'There is no proof for the assertion that a relation (Inherence e. g.) continues to exist even when the relative (the Product in which Inherence subsists as a relation) has ceased to exist [and this is what the aforesaid tenet of a single Inherence would imply ]-It is not true that there is no proof for this; a when the relative ceases to exist, all that cease (so far as the Inherence is concerned) are the circumstances that rendered the Inherence cognisable, and not the Inherence itself; for the

• In conjunction, the *prdpfi*, contact, is temporary; so if the subsistence of Inherence were of the nature of Contact, there would have to be an endless series of contacts to explain the permanent relation of Causo-Effect and such other cases of Inherence. While if the subsistence belonged to the Product itself, then, the Inherence would continue as the *permanent* relation throughout the several change that the product undergoes every moment.

f AntwasfAd, Endless Assumption, is regarded as valid or permissible parmo, gika, only when the first step in the series cannot be ascertained; in the case of Contact, however, we can always lay our hands on the first contact; hence Anavasshs in this case cannot be permissible.—Tatparpa. Inherence is not a product (and hence cannot cease to exist) ; every product having a substratum\*; if it were a product. it could be produced only along with the product (which is related by that Inherence); and in that case, (as pointed out above) this latter Product would, at the moment that it is produced, be without a substratum [as it can subsist in its substratum only through Inherence, which, on your supposition, is not yet produced]. 'The Inherence is certainly produced before the Product.' Even so you will have to explain to what the Inherence belongs (at the time that it is produced ; the Product not yet being in existence). If then, the Inherence be held to be produced after the Product, the objection remains in force that the Product, at the time of its production, would be without a substratum. For these reasons it has to be admitted that Inherence is 'self-sufficient."+

The answer to the above objection (started above, P. 179) is that when Inference is spoken of as pertaining to *things notpresent*, what is meant is that Inference which pertains to qualifying adjuncts that are denied, ‡ and not that which pertains to those that are affirmed, or to those that are self-sufficient§.

"But we do find that things not present are sometimes actually affirmed;—e. g. when we make the affirmation ' ghato

• The reasoning is thus formulated by the *Tātparya*—' The Product is related to its cause by a permanent relationship (a relationship which is not a product), because it has a substratum'.

+ The objection started on p. 55, l. 1 (*Trans. p.* 179, l. 18) ends here; the final upshot of the objection is thus summed up in the *Tatparya*—'There being so n any as three kinds of qualifying adjuncts, we do not know with reference to what Inference has been held to pertain to things not-present.'

‡ As only things not-present—i. e., past and future things—can be denied at the time (the present) when the Inference is formulated

§ The real classification of qualifying adjuncts is not exactly as the objector has put it.

In reality, in the first place, qualifying adjuncts are of two kinds—(a) affirmed and (b) denied; secondly those affirmed are of two kinds—(a) self-sufficient and (b) dependent.

It is not true that only the not-present things are denied.

bhavafi' ('the Jar is being produced'), where 'bhavafi' is synonymous with 'jāyafē' [and that which is being produced, i. e. in course of production, is certainly not present]."

This is not true; as a thing that is being produced is not held to be (either present or not present); the word 'bhavafi' (in the sentence 'ghato bhavafi.') is synonymous with vidyafë 'exists', (and not with ' $j\bar{a}yaf\bar{e}$ ', 'is being produced') [and when this 'existence' is affirmed with regard to the jar in course of construction, the 'jar' here stands for the several parts of the jar that have already been constructed, and which, being accomplished entities already, are sufficient for the purpose of the thing being recognised as 'jar' and being spoken of as 'bhavafi, vidyafē.']

Thus we have established the proposition ' fafpurvakam anumānan'.

Other philosophers have defined Inference 'Anumāna' as the perception of the thing which is invariably concomitant, this being held to be 'Anumāna' (Instrument of inferential cognition) for one who knows the said concomitance. This definition is thus explained :—When one thing is never present apart from another, it is said to be 'invariably concomitant', 'nānfarīyaka', with it ;—the thing that is so concomitant is called the 'nānfarīyaka-arfha'; and the 'darshana' 'perception', of that thing is 'Anumāna', for the man who knows it,—i. e. who knows that the thing perceived is 'invariably concomitant.'

This definition however, cannot be accepted; firstly, because the word 'artha', 'thing', is superfluous; as what is 'invariably concomitant ' can not but be a thing; --secondly, ' nānțariyakārtha', is a compound word; (A) now if this compound were treated as a Genitive Tatpuruta, being expounded as ' nanțariyakasya arthaț', then, in the case of the Inference'sound is transient, because it is a product'-the character of being a product is the 'nantariyaka'; and the 'artha' of this would be either (a) its dharma, property, or (b) its prayojana, purpose or aim; (a) if the property of 'the character of being a product' were the 'artha' of the 'nantariyaka' (meant by the definition), then it would be possible to infer 'transient character' even from such properties as 'being an entity', 'being an object of cognition', 'being nameable' and so forth (which is absurd); \*--(b) if, on the other hand. the purpose or aim of the 'character of being a product' to be the 'artha' of the 'nantariyaka', were meant <sup>c</sup>ognition the then of transient character' would become the Probans of the Inference [Transient character being the 'aim' or 'end' of 'being a product'.] (B) If then, the compound ' nantarikakartha ' were treated as a Bahuvrihi compound,-being expounded as 'that to

which the  $n\bar{a}n_{1}ar_{1}yak\bar{a}r_{1}ha$  belongs'—then also  $v\bar{a}r. Pace 57.$  'the character of product' being the ' $n\bar{a}n_{1}ar_{1}$  yaka,' that to which this belongs would become the *Probans*;† and what is that to which this character of being a product belongs ? (a) Does it belong to such things as the jar and the like ? (b) or to Sound ? (c) or to transient character. ? (a) If it belongs to the Jar &c., then these become the means of Inferential Cognition; the inference being in the form— 'Sound is transient, because it is a jar'! (b) If it belongs to Sound, then Sound becomes the means, and the form of the inference becomes—'Sound is transient because it is sound'! (c) If lastly, it belongs to transient character,—belonging

<sup>•</sup> As the properties of 'being an entity' &c. are found in Aldeka and such other sternal things also.

<sup>†</sup> That is, if we define 'Axumāna'-which means, 'the source or means of inferential cognition'-as 'nan fariyakārfhan darshana, the cognition of that to which the nintariyaka belongs would be such an Anumāna or means of inferential cognition; so that the cognition of transient character, e. g., instead of being the result, would be the means of the inferential cognition | And other similarly absurd results would follow from the theory.

to it as its cause, or that which proves it-then also the form of the inference becomes-'Sound is transient, because it is transient !'-as 'the character of being a product ' is the 'artha' of the 'transient character;'-in no case could the former be a reason for the latter [and this is what it is intended to be in the inference 'Sound is transient, because it is a product. '] (c) If the compound 'nantariyakārtha' be treated as Karmadhāraya,-being expounded as 'that artha which is nantariyaka,'-in that case. the compound would be impossible; as the exact conditions of the Karmadhāraya compound -- compound between the qualifying adjunct and the qualified object-are not present : that is to say, the co-ordination, or coextensiveness, necessary for the Karmadhāraya compound is possible only when difference\* between the two words (the thero is some one denoting the qualifying adjunct and the other the qualified object); as we find to be the case in the well-known compound 'nilopalam', 'blue-lotus', where we know that the word 'blue' signifies a colour that is present in many things (besides the lotus) and that the word 'lotus' applies to many lotuses (besides the blue one); and hence we have the co-ordination between the two (in the compound ' nilotpalam');-in the case of the words 'nantariyaka' and 'artha', on the other hand, we find that when we mention the word ' nantariyaka', there is no such discrepancy or difference as that the character of being nantariyaka subsists in what is artha as also in what is not-artha; t and under the circumstances the mention of the word 'artha' (in addition to 'nantariyaka') cannot but be regarded as futile and "But we find the necessary co-ordisuperfluous. nation even in a case where only one of the two words (and not both) are incompatible; e.g. in the expression 'prithing gravyam' (there is co-ordination between the 'Earth' and

<sup>•</sup> Otherwise-i.s. if the two are identical-both need not appear at all.

<sup>†</sup> As it is only an orthe that can be want drivaka.

the 'Substance', even though it is only the word 'Substance' which applies to things other than Earth also; while the word 'Earth ' does not denote things other than Substance)."\*

In this case also, we reply, there is an incompatibility in both the words: when we take into consideration the diversity based upon the relation of subserviency (that subsists between the class as the qualifying adjunct. on the one hand, and the *individual*, as the qualified of the class, on the other),-that is to say, the word 'Substance' denotes the individual substance, as well as the class 'Substance '--- the word 'Earth', while denoting the class 'substance' as forming its predominant qualifying adjunct, also denotes the individual earth as well as the class 'Earth' (which last cannot be identical with Substance) +; and thus there is a clear incompatibility between both words (the word 'Earth' also denoting something that is not-substance); which makes the proposition ' the Earth is a substance' possible. The same conditions however do not hold regarding the co-ordination implied in the compound 'nantariyakārtha — darshanam '. " Why so?" Because people make use of words only for the purpose of making known things expressed by them; and as a matter of fact, we find that when the word 'nantariyaka' is mentioned, it provides the idea of the 'artha' also (as it is only an artha that can be nantariyaka); and hence it is no longer right and necessary to mention the word 'artha.'

Lastly, the definition contains the phrase--- ' for one who knows the said concomitance'; and this is not right; being

<sup>•</sup> So also in the case of manfarlyaka' and ' arfha,' it is true that the word manfarlyaka' does not denote anything that is not-arfha' but the word ' arfha ' does denote things that are not-manfarlyaka.

<sup>+</sup> Jați according to the Logician being something distinct from Dravya.

<sup>†</sup> Though 'arfha' is incompatible with 'ndnfariyaka'—all arfha not being ndnfariyaka; yet 'ndnfariyaka' is not incompatible with 'arfha; 'ndnfariyaka' does not signify anything that is not-arfha; bence the case of 'ndnfariyakārfha is not analogous with ' prifhivi—dravam.'

entirely redundant; as there can be no idea of anything being nānṭarīyaka unless the person (using the word) knows it to be so: e. g. people who live in the Nārikēladvīpa (where there is no fire?), if they happen to see smoke, cannot have the idea of its being 'nānṭarīyaka' (with fire); hence it is unecessary to add the phrase 'fadoidah,' 'for people who know the invariable concomitance.'

[Another definition is next taken up]

The above reasoning also serves to set aside another proposed definition: viz: 'The cognition of the  $avin\bar{a}bh\bar{a}vi$ *gharma* is the  $h\bar{e}tu$  (means of inferential cognition).' "What do you mean by applying to this definition the same objections (that have been urged against an entirely different definition, this last definition not containing the word '*tadvidah*' of the former definition)?" What we mean is that, just as in the expression '*nantariyakārthadarshana*', the word '*artha*' is superfluous, so in the other definition is the word '*dharma*'. Then again, the example of Inference that the propounders of this definition cite is—' there is smoke, because there is fire'; and we have more than once shown that such an inference is impossible.

jar.' \* " The definition cannot apply to such inferences, because what the definition states as a necessary condition is that the hefu should be present where the Subject is present [and certainly odourousness is not present wherever atoms are This does not save your definition from the present ]". said undue application; what subsists in a part of an object is also its dharma, -just as what subsists in a portion of the vipakea (i. e. where the Probandum is known to be absent) is regarded as the *dharma* of vipaksa: when a certain thing is found to subsist in a part of the vipaksa. we do not hold that it does not subsist in the vipaksa; in the same manner, where a thing is present in a portion of the pakea (Subject of Inference) we cannot deny that it subsists in the Subject ;---and thus it behaves you to make an effort to exclude that which subsists in only a part of the " No special effort is needed for that pur-Subject. pose; the necessary preclusion of what subsists only in a part of the Subject is secured by the restriction or emphasis implied (in the words 'anume it sadbhavah, which means 'anumeye sadbhavah eva']" [This is not right; as | the emphasised assertion 'anumeye sadbhavah Eva' can mean only two things: (a) 'it subsists only in the subject of inference,'-or (b) ' it must subsist in the subject of inference.' † (a) Of these, as regards the former restriction, what does it do? Does it preclude impossibility? [That is, does it mean that it is not impossible for the hefu to subsist in the Subject of inference ]? or does it only indicate the possibility (of the  $h\bar{e}/u$  subsisting in the Subject)? In either case there is no useful purpose served by the emphasis or restriction ; the desired sense being got at even without the restriction ; the idea that the hoju

<sup>•</sup> Odorousness is present in certain atoms (those of the Earth) and is not present where those atoms are absent ;--hence the inference should be accepted as valid, under the definition.

<sup>+ (</sup>a) Means that it cannot subsist anywhere else ; and (b) that wherever the Subject is present the other must be present.

subsists in the Subject of inference, and that it is not impossible for it to subsist therein, is implied in the simple statement (ānumēvē sadbhāvah') without the restriction ; and yet that this hetu subsists in a part of the Subject does not become excluded by the emphasis ; which, thus, fails in the very purpose for which it was brought in. Then again. [the restriction implied in 'anumeye eva sadbhavah' would mean that the hefu subsists in the anumeya only, that is, in nothing else, not even in the *faf-fulya*; and thus] there would be a contradiction of the latter half of the definition [which consists of two halves-(1) 'anumeye sadbhavah, and (b) Then as regards the 2) tat-tulye sadbhavah.] second of the two meanings of the restriction [i. e. if the meaning is that the hefu must subsist in the Subject], this would imply that there is vyapti or invariable concomitance between the two; but that particular Subject (e.g. fire) which is cognised by means of the inference has no connection with the invariable concomitance (upon which the inference would be based); as that (fire) wherein the instrument of inference (or Probans, e. g. smoke) subsists (at the time of inference) is entirely different from that wherein the invariable concomitance (of smoke with fire) has been observed.

[' $Anum \overline{e}y\overline{e} sadbhavah$ ' having been disposed of, the author takes up the next factor of the definition, ' $faf-fuly\overline{e}$ sadbhavah']—As a matter of fact where the Subject (fire) is observed, there is always a possibility of the presence of the Probans (smoke); and (on the occasion of the inference) what we do not know for certain is the possibility of the presence of the Probans; and so long as this uncertainty

continues, we feel that it may subsist (a) in the Subject (fire), (b) in that where the Subject is known to be present (the kitchen), and (c) in that where the known to be absent (the lake); thus then Subject is (apart from the Subject itself) there are two possible substrata where the Probans might subsist-viz : the fat-fulya or Sapaksa (where the Subject is known to be present) and the Vipaksa (where it is known to be absent); such being the case, it may be right to preclude the possibility of the real Probans in the Vipakea by means of the clause 'nāstitā asati' 'where the subject is non-existent,' (the last clause in the definition);-----but for what purpose should there be introduced the other clause 'tat-tulye sadbhavah'? It does not indicate anything that is not already indicated ; all that is intended to be indicated is the mere possibility of the presence of the Probans in the Sapaksa (and not its invariable concomitance with it) \*; and this mere possibility is got at even though there is an uncertainty as to whether or not it is invariably concomitant [ Hence the clause in question cannot be taken as indicating the invariable concomitance of the **Probans** with the sapaksa]. The clause 'tattulye sadbhavah' is introduced for the pur poses What is it that is of emphasis". meant to be emphasised by the clause ? Does Var P. 59. mean-(a) the Probans it subsists in the Sapakes only ?---(b) or that it must subsist in the Sapakes P (a) If what is meant by the emphasis is that it subsists in the 

the first and second clauses of the definition : Just as one

191

<sup>•</sup> If this invariable concomitance with the sapake were meant, then the definition would not apply to the case of the valid inference 'this is transient because it is preceded by effort'; as in this case the probans—being preceded by effort—is not invariably concomitant with all transient things; for instance the jar, which is transient, is not always preceded by effort; it is only when it is produced that it is so preceded.

cannot say 'feed only Devadatia, and also Yajäadatia', so the statement in question—' it should subsist only in the Sapaksa and also in the Subject of inference' cannot but be regarded as the raving of a maniac. (b) If then the meaning of the emphasis be that the Probans must subsist in the Sapaksa,—then that which subsists in a part of the Sapaksa, [i. e. not in all Sapaksas, but only in a few] would coase to be a true Probans; e. g. the character of being preceded by effort, and the like, which subsists only in a few, and not in all, things belonging to the same class as the Subject of inference (all transient things in the case in question), would not be a true Probans.\*

Lastly, the last clause of the definition----- ' asati nāstita; 'it should not be present where the Subject is not existent '----- has been introduced without due consideration. That which is non-existent, is by itself a non-entity at the time; and a non-entity could never be the substratum (of the Probans; and hence a denial of this impossible contingency of the Non-existent Subject being the subtratum of the Probans) is meaningless. "This clause also is introduced for the purpose of emphasis." What is the meaning of this emphasis ? Does it mean-(a) that the Probans never subsists ? or (b) that it does not subsist in the non-existent Subject only ? (a) If the former, then the addition of the word 'asafi', ' in the Non-existent Subject ' becomes superfluous; as even without this word, the intended Nonsubsistence would be got at ; i. e. when a thing is spoken of as 'not subsisting 'at all, it is implied that it does not subsist in the Non-existent Subject also. (b) If then, the meaning of the emphasis be that the Probans does not subsist in the Non-existent Subject only, ----- then the Probans in the inference ' this is a cow because it has horns ' would be a true

<sup>•</sup> The sense demands a ' nd ' here ; as the character in question, is regarded as a true probans.

**Probans ; as horns are absent only in the non-existent Subject** [*i. e.* the *vipaksas* ; it is only animals other than the cow that are hornless], and they are not *entirely absent* in all *Vipaksas* (as the buffalo, which is *not a cow*, has horns).

[Having criticised each of the three clauses of the definition separately, the author proceeds to criticise the definition as a whole.]

The upholder of the definition offers the following explanation of his definition :----- " The definition contains three qualifications; by the omission of any one, in turn, of these qualifications we would have three forms of the definition; similarly by the omission of any two, in turn, of the qualifications. we would have other three forms of the definition ; and by retaining all the three we get the seventh form ; what then is meant to be done by the definition is to reject the first six forms,\* and to accept the seventh form, with all the three qualifications." This explanation is not right, we reply; as, firstly, the two kinds of § affirmative Probans are covered by only the first two clauses of the definition; and secondly because the negative Probans is covered by only the first and third clauses [and yet both these are accepted true Probans]. For instance, (1) for one who does 88 not accept Sound to be eternal, the two reasons or Probans ---- because it is a product, and because it is preceded by effort-serve as true Probans, and yet they fulfil only the condition indicated by the first two clauses of the definitionthere being, in this case, no vipakea [and thereby the condition nāsiijā asaji' being impossible];-(2) in the case of the negative Probans, as there is no sapakea or fatfulya', the qualification indicated by the second clause being im-

<sup>† &#</sup>x27;Two kinds '-(1) that which is invariably concomitant with both sadd yas and sapates; and (3) that which is invariably concomitant with the sadd ya only; its concomitance with the sapates not being invariable.

possible, only two conditions—indicated by the first and the third—are sfulfilled; and yet it is accepted as a true Probans; e. g. 'the living body is not soulless, as otherwise it would be without the life-breath'. Thus then, inasmuch as the definition fails to include the two kinds of Probans thus noted, it becomes 'defective ('too narrow').

The author next attacks the definition propounded by the Sānkhyas :- They have defined Inference as" 'sambandhadekasmat pratyaksachchhesasiddhiranumanan' [which means either-(a) where there is a relationship (between two things), from the one perception (of the Probans), the cognition that arises of the other (thing, the Subject) is Inference'; or (b) 'out of one perceptible relationship the cognition that arises of the Subject is Inference ']. This definition also is to be rejected on the same grounds as the one propounded by the Bauddhas. Firstly, as a matter of fact, Inference does not proceed from a single perception (as the former of the two interpretations of the definition implies) [there is one perception of the Probans at the time of the inference : but before that many more perceptions are necessary for the recognition of the invariable concomitance between the probans and the Probandum]. If it is the second interpretation of the definition that is intended-the meaning being, 'from one perceptible relationship',-this also will not be right; as at the time that the observer draws his inference what he actually perceives is not the relationship (but only the Pro-"But the relationship has been perceived bans). Even so, you would have to regard as beforehand." 'inference' the cognition that the man may have at a time when he does not actually perceive the Probans, only if he may have perceived the relationship beforehand (which is absurd. And these are the only two interpretations that

<sup>•</sup>This sentence is in the same metre as that of the Sänkhyakärikä of Ishvara Erispa. Where does this definition occur ?

are possible of the proposed definition. Further, the case of the inference of touch (coolness or warmth) from colour (which inference is quite possible, also under the definition in question), —would be a direct contravention of the tenets of the Sankhya; as a matter of fact, the Sankhya can never (under his theory) have a perception of the relationship be ween colour and touch.<sup>\*</sup> "There is certainly this relation between touch and colour (in the case

cited) that both inhere in the same object." Var. Page 60.] But this also is not right, being incompatible with the tenets of the Sānkhya (who does not accept any such relation as Inherence), under whose theory, colour and touch do not subsist in the same object; it is not true, according to them, that the touch subsists in the same substance in which the colour subsists; as, by their philosophy, either touch or colour does not subsist in any object [all these qualities being only forms of Nature, Prakriti, they are one with this latter; hence they cannot be said to be contained in Prakriti either]. "There may be this relation (between Prakriti and its modifications) that they are themselves the substrates of each other." But even so,--even though there be the mutual relationship of being the container and the contained of each other-it would not be possible for touch to be contained in colour, or colour to be contained in touch [so that even the mutual relationship of the container and the contained could not be asserted in the case of touch and colour]. This also sets aside the view (held by the Sink'yas) that there are seven kinds of relationship (between things; and some of these would be possible as between colour and touch); because as a matter of fact, from among these seven kinds of not one that is found to hold between colour and touch.

<sup>•</sup> There can be no relationship between any two things, under the theory that everything is undergoing modification every moment.

And yet the inference of touch from colour is a perfectly valid one; hence the definition (which does not apply to this inference) is clearly too narrow; and hence defective.

Thus has Inference been explained.

#### ANALOGY.

Analogy is next considered—

SOTER (6)—\* Analogy is that which accomplishes its purpose through similarity to a known object.

#### Buāşya.

# [P. 21, l. 1 to P. 22, l. 3]

+ That is, Analogy is that which makes known what is to be made known, through similarity to an object that is already well known; e. g. the assertion 'as the cow so the gavaya' [i. e. the animal called 'gavaya' is like the cow].

"What is it that is accomplished by this analogy?" When a person finds similarity to the cow, he actually perceives the object that had been referred to in the analogy; and thence he comes to cognise the connection of that object with the name mentioned in that Analogy; so that it is this latter cognition that is the purpose accomplished by the Analogy. For instance, when the Analogy, in the form 'the animal called gavaya is like the cow', has been put forward, -and the man who has heard this happens, subsequently, to perceive, through the contact of his sense-organs, an object similar to the cow,-he realises that ' the word gavaya is the name of this object', and comes to cognise the connection of the particular name with the particular object. Similarly in the case of such analogies as 'the mudgaparni is similar to the mudga', 'the masaparni is similar to the masa'-being put forward, the observer, by means of these analogies, comes to know the con-

• The confused use of the word 'pramäna' continues. We have seen that *Prafyakşa* has been defined as the *cognition* that is brought about by sense-contact &c.; and here we find *Upamana* being defined as that which accomplishes the purpose of making known, -*i. e.* a means of cognition.

+ There is some difference between the *Bkdsyz* on the one hand and the *Tarfika* and the *Taffarya* on the other. As regards the object of analogical cognition and the exact *form* of that cognition, there is no difference ; as according to both the object is the connection of the name with the object, the form of the

Downloaded from https://www.holybooks.com

nection of the particular names with the particular objects, and thereby obtains the particular herb (mudgaparns or māşaparni) that he requires.

In the same manner we can explain other objects of Analogy met with in ordinary experience.

VARTIKA ON SU. 6.

.

[P. 60 L. 8 to P. 61, L. 3]

We proceed next to describe Analogy. The aphorism is to be interpreted as before, as providing a definition that differentiates Analogy from all homogeneous and heterogeneous things.

The compound 'prāsiddhasādharmyāf' in the Sūțra means—either that whose similarity is known, or that which has similarity to a known thing; \*—for instance, the gavaya

cognition being 'this object is what is named gavaya'. There is however a marked difference of opinion as to the means of the cognition ; that it is the similarity between the two objects that is the means, on this also all are agreed ; but according to the *Bhâyya*, it is this similarity as expressed in the assertion 'the gavaya is like the cow', -which assertion is remembered at the time that the man sees the animal ressembling the cow ; while according to the *Vârțika* and the *Tâțparya* it is the similarity that is actually seen when the animal is seen to ressemble the cow,--this perceived similarity being aided by the remembrance of the similarity expressed in the assertion ' the gavaya is like the cow.' Says the *Parishuddhi*. **Trrease** 

The Taiparya interprets the Bhāya passage 'yaihā gauh faihā gavayah' (il. 1-2) to mean that the similarity should be one that is already known by means of such assertions. But we find ( in 1, 4 ) the Bhāya calling this assertion itself 'Upamāna.'

There is no doubt that the view of the Vārfika and the Tālparya is more logical. The latter rightly remarks that for the cognition that 'this animal is what is called gauges' 'it is necessary that the observer should know the assertion 'the gavaya is similar to the cow', and also that he should preceive the similarity to the cow in the animal concerned. If the analogical cognition had for its means only this remembered similarity, then its validity would be as doubtful as that of Remembrance itself.

• This is different from the interpretation given by the Bhayse. The Tayparya remarks—' The Variika proposes to take the compound as a Bakuvriki; but it does not reject the Bhaysa's interpretation of it as an Instrumental Taypuruss'. The Parishujdki adds that the similarity must also be well-known ; so that there should be [ whose similarity to the cow is known, or which is similar to the well-known cow]; and this analogy accomplishes the purpose through that thing (which is similar);—*i.e.* accomplishes (brings about) the cognition of the connection of the name; and *Analogy* is that which, through such a thing, accomplishes —*i. e.* makes known—what is to be accomplished or made known—*i. e.* the connection of the thing with its name.

"What does this mean ?" It means simply this, that the knowledge of similarity, as aided by the remembrance brought about by the impression left by a trustworthy assertion, is what is called 'Analogy.' That is to say, when the observer happens to have heard the assertion that ' the gavaya is like the cow',-and thus the similarity between the cow and the gavave being well known to him,-and, on some future occaions, he sees the gavaya and perceives its similarity to the cow. -he comes to have the cognition 'this is gavaya'; a cognition in which be cognises the connection of the animal with the name 'gavaya' and this last cognition has been brought about by the perception of similarity as aided by the remembrance of that same similarity which is brought about by the impression left on the mind by the assertion that 'the gavaya is like the cow.'l

[The Bauddha<sup>•</sup> brings forward the following objection against Analogy, as an Instrument of Cognition ]—" Analogy does not differ from Perception and Word. "How so?" When the observer actually sees the cow and the gavaya, it is by Perception that he cognises that the one is similar to the other ;—when too he hears the assertion that 'the gavaya is like the cow', the cognition that he has (of the similarity) proceeds from his hearing of the words (so that the cognition is purely verbal). Of the

Karmadharays compound also; but (it adds) both the Tapperupa and the Kamadharays are implied in the two Bahavrihis that the Farjiks has put forward—(a) 'that whose similarity is known implies that the similarity should be known ; and (3) 'that which is similar to a known thing' implies what is meant by the Tapperups.

<sup>•</sup> In Chapter IV. (of his Praménastmuchkays) Difinaga rejects Upamana as a separate instrument of cognition ; he includes it under Perception.

many properties of the cow, a few are found to be present in the gavaya; while others are absent; if it were not so (and if all the properties were present in the gavaya), then there could be no such assertion as ' the gavaya is *like* the cow '; all that the observer cognises is that the gavaya bears much res\_ semblance to the cow. Thus it is found that Analogy does not differ from Perception and Word."

The theory of the Bauddha comes to this, that the same cognition apprehends the similarity of the cow in the gavays and also the presence of the gavays (as similar to the cow): and this shows a rare insight into the nature of Pramānas ! [Apart from this however] What the  $S\bar{u}$ fra means is that what follows from the cognition of the similarity of the gavaya to the cow is the cognition of the connection of that animal with the name [and it is thus this latter cognition, and not the cognition of similarity, that is brought about by means of Analogy]\*. Thus it is found that it is without understanding the meaning of the  $S\bar{u}$ fra that the Bauddha has urged a frivolous objection.

### Word.

# Внаяча.

### [Page 22, 1. 5 to l. 9.]

We now proceed to describe Word [as an Instrument of Right Cognition]-

SOTEA (7). The assertion t of a reliable person is 'Word'.

That person is called '*āpța*', 'reliable', who possesses the direct and right knowledge of things, who is moved by

\* Thus Analogy must be regarded as different from Perception and Word, because the cognition that it brings about is of an entirely different character from the cognition brought by the latter two.',—*Tāţparya*.

+ 'The word Upagiesha, standing for words uttered for the benefit of others, here. applies to the Sentence as well as to what is expressed by the sentence. When the sentence is regarded as the 'means ' of the cognition, the result brought about by it is the knowledge of what is expressed by it; and when this latter is the 'means ' the 'result' consists in the idea of acquiring or discarding the thing spoken of *Tdiparya*. a desire to make known (to others) the thing as he knows it, and who is fully capable of speaking of it. The word ' $\bar{a}p!a'$ is explained as denoting one who acts or proceeds, through ' $\bar{a}p!i$ ', *i. e.* through the direct right knowledge of things. This definition applies to sages, \* as well as to  $\bar{A}ryas$  and Mcelhchhas †; the activities of all these people are carried on through such 'Words.'

Thus we find that it is by means of the aforesaid four Instruments of Cognition,—and not by any other means—that the activities of Gods, Men and Animals are carried on.

Vārtika on Sūtba 7.

### [P. 61, line 4 to P. 63, line 20.]

We proceed next to describe Word (as the fourth Instrument of Cognition]. What the Sūţra means is that the 'Word' that is the *Instrument of right cognition* is that which consists in the assertion of *reliable persons*, and not in *mere* assertion (which would include the assertion of unreliable persons also, which does not always lead to *right* cognition).

• 'One who has direct intuitive knowledge of things is a Sage. The name Ārya stands for the people of the Central Land (bounded by the Bay of Bengal, the Arabian Sea, the Vinghya and the Himālaya). And the residents of the rest of the world are called Mlöchchha's !

† 'There are cases where the word of the worst man is true and reliable. For instance, after a robber has taken away all that a traveller possessed, if he is asked to point out the way to a certain place, what he indicates does turn out to be the right path. The word of such people is reliable only when they have no motive for giving incorrect information. Hence for being an 'äpta', for purposes of the validity of his assertions, it is not necessary that he should be completely free from all defects, as has been asserted by some philosophers'.—Tatparya.

On this the *Parishuddhi* observes as follows :--There two kinds of persons-ommiscient and not-ommiscient; of these, the unreliabity of the former is set aside by the very proof that establishes his existence; as the person who is proved to be ommiscient is also proved to be free from all defects of ignorance, love, hatred and the like. As for the not-ommiscient person, his assertions only can bear testimony to his being reliable, by reason of his being possessed of--(a) due knowledge of the thing spoken of, (b) desire to convey true information, (c) efficient faculty of right articulation &c.; and one can be sure of this only after having repeatedly found the man to be possessed of these qualities.

The Bhasya (p. 22, 11. 5-6) says-That person is called 'reliable' who possesses the direct and right knowledge of one who acts through.' apti', i. e. through the direct and right knowledge of things. Against this the following objection is raised (by \* the Mimāmsaka) :---- " No Assertion is possible in regard to such things as Heaven, Apurva, † Deity and the like ; as all these are beyond the senses; that is to say, if by the 'āpți' of the thing (by reason of which the man is called ' apja ' ' reliable') is meant the direct valid knowledge of things, then,inasmuch as no one ever perceives, or has the direct knowledge of, Heaven, Apurva, Deity and other such imperceptia ble things,---there could be no activity of speech (assertion) bearing upon these things. Consequently it would be well to explain the compound 'aptopadeshah' as 'aptah upadeshah', 'reliable assertion', ‡ and not as 'apinsya upadēshah' 'the assertion of a reliable person."

This objection does not affect our position; for we do not mean to say that Heaven &c., are *perceived* by us; what we mean is that those persons to whom they *are* perceptible (the Sages for instance),—the *assertion* of these persons would constitute the *Word* (as the valid means of cognising those things) §. "But what is your reason for believing that

<sup>‡</sup> 'The Veda, being without an author, it inherently. free from all those defects that vitiate the reliability of assertions; hence with regard to all things, visible and invisible alike, it is *reliable*. As regards the words of persons of the world, these are *reliable* when they have the sanction of the other means of knowledge'.—*Tāţparya*.

§ And as the Vedas are (according to us) the work of God ;—and God can perceive Eleaven &c.,—it is only natural that his 'assertion', in the form of the Vedas, should be the 'word' that provides the means of knowing these things

<sup>•</sup>Who denies an author for the Veda ; hence if Word were defined as 'the assertion of a reliable person ', the Veda would be excluded.

<sup>+</sup> This is the name given to a certain invisible agency or force set going by every act that man does; this force being the immediate cause of the results, accruing to the man, from that act.

Heaven &c., are perceptible to some persons?" \* We explain our reasons as follows :-+ Heaven, &c., are perceptible to some persons,-because they are possessed of certain definite generic and specific characters:-for instance. (a) because Heaven &c. are 'dshrita', i. e. subsist in a certain substratum, -as a matter of fact, whatever is so subsistent must be perceptible to some one; ----(b) because they are for the sake of others. - whatever is for the sake of others must be perceptible to some one; ----(c) because they are things, and are capable of being spoken of,-whatever is a thing and is spoken of, must be perceptible to some one; as we find in the case of the jar and such other things ;-and (d) because they are not eternal, ---whatever is non-eternal "But as a matter of must be perceptible to some one. fact. Apūrva is not known to be non-eternal." This is not right; for in that case, there would be no possibility of death: that is to say, if Merit and Demerit (which constitute Apūrva) be eternal, to the destruction of what will man's death be due? If they are non-eternal, what happens is that the Merit and Demerit, that have begun to bear fruit, are destroyed by reason of their fruits having been experienced,-and there being left no more of such residuum of past deeds as has begun to bear fruit,-the Mind (Soul) of the man falls off from the body, and moves into another; and in this manner

+ In every reasoning that much alone of the Subject can be put forward as the 'Subject,' as much of it is known to contain the Probans. Hence, when the Mīmāmsaka puts forward the reasoning 'The perception of the sages, &c.' wherein 'the perception of the sage' is put forward as the 'Subject', it follows that he accepts such perception as a reality. And when it is admitted, it must be admitted exactly as it is known to exist ; so that there can be no reason for denying that they de pertain to Heaven &c. If, on the other hand, the said 'perception of sages' is not admitted, then the reasoning becomes open to the fallacy of the 'Unknown Subject' So much for the untenability of the reasoning against the perceptibility of Heaven &c., by the sages. As for positive proofs for such perceptibility, we have many such ; some of which are mentioned.

<sup>•</sup> Our reason against such belief being-"The perception of the sages cannot pertain to Heaven and the rest, -because it is perception, --like our own perceptions."

death and birth go on. For these reasons Merit and Dermerit (Apurva) cannot be eternal.

Then again, if Aptirva be regarded as eternal, (a) is it one only, common to all persons ? (b) and (c) or is it, different for each person, • [ (b) one for each person, or (c) many for each person]?

(A) If it were one only, common to all persons, then the good (resulting from it) would also be common to all persons ! As there is nothing

else that could determine which resulting good should go to what individual person; and thus (the good deed done by one person bringing the desired good to all) people would abandon the performing of meritorious deeds. " Even though Apūrva be eternal (and one only), as there would be many and diverse manifesting agencies, there would be neither of the two incongruities pointed out;-that is to say, even if the Aparva be eternal and one only, common to all persons, neither the resulting good would belong to all persons, nor would there be a cessation of meritorious deeds. 'How so?' For the simple reason that the manifesting agencies are many and diverse ; that is to say, the result proceeds (not from the Apurva but) from that which manifests that eternal Apurva ; and it is for this manifesting of the eternal Aptirva that deeds have to be done; so that there is no possibility of the cessation of meritorious deeds; for it is a well-recognised fact that that which is manifested by a certain person brings its results to that person only [and thus when the Apūrva is manifested by the act of a particular person, the good resulting from it will belong to that person only]." This last statement that you make by no means represents a well-recognised fact; for instance, it is not a fact that the Jar that is manifested

<sup>•</sup> There are three possible alternatives implied in this, says the Täiparya :--(1) There is a single Apärva common to all persons; (2) there are many Apärvas one only for each person; (3) there are many Apapens for each person.

(rendered perceptible) by Dēvadatta is not seen by Yajfadatta. Further, what do you mean by the 'manifestation' of the eternal Apurva? Does it mean that it is gerceived? or that it becomes capable of bringing about its results? or that its covering is removed? If you mean that it becomes perceived, then this is not a fact; as no ordinary person ever perceives the Apurva, • which is beyond the reach of the senses. If secondly, you mean that the Apurva, by being manifested, becomes capable of bringing about its results, then we ask-is this capability of bringing about its result the Apurva itself? or is it a property belonging to the Apūrva? If it is the Apūrva itself, then in that case [as the Apūrva is eternal, and the said capability is nothing other than the  $Ap\bar{u}rva$  there is nothing done by the man to the Apūrva [so that one man's Apūrva should bring results to all men]. If, on the other hand, the said capability is a property belonging to the Apūrva, then, what proof have you for the belief that the Avūrva is something entirely different from that capability? The view held is that the Apurva is that from which the result follows. If, lastly, by the 'manifestation' of the Apūrva you mean that its covering is removed,then you have to explain what this 'covering' of the Apurva is; as a matter of fact however, we cannot conceive of the possiblity or impossibility of any covering for things that are beyond the senses.

(B) The above reasonings also serve to set aside the view that  $Ap\bar{u}rva$  is eternal and [one] for each person. "How?" For in this case also the incongruities pointed out in the previous case—viz. the cessation of meritorious deeds by men &c.—are present; and so also the incapability of manifesting agencies (for the  $Ap\bar{u}rva$ ); and further, there would be no possibility of any activity for the purpose of adding to the  $Ap\bar{u}rva$  that has been once produced; as [this

<sup>·</sup> And as regards the Sage, he can perceive even an unmanifested Aptirva.

'addition' consists in the increasing of the component factors, and] no change of composition is possible in the case of an eternal thing (as the Apūroa is held to be). " The diversity in the composition would be due to the diversity in the manifesting agencies."\* This is not right; as no such diversity is ever found in any single thing. All that you mean is that though the Aparoa is one only, yet it can appear as diverse, through the diversity of its manifesting agency. and this diversity vould cause the said 'increase' and 'decrease'. But this, we say, is not possible; for the simple reason that no such diversity is ever found to appear in any single thing; that is to say, we have never found any single thing being affected by any diversity of its manifesting agency, whereby any such 'increase' or 'decrease' could be "But, as a matter of fact, we have found such possible. diversity (and increase and decrease) in the size of the face as reflected in diverse reflecting media, like the bright sword (the large mirror, the small mirror,) and so forth." No such diversity has ever been found, we reply. " Then what is it that is found (in the case cited by us)?" (In the case you have cited) the idea of diversity (that people have)

is a wrong one; the face only appears as if it vār. Page 63. were diverse, and it does not actually become diverse; and this for the simple reason that one and the same thing can never have more than one form; there is no single thing that ever takes diverse forms. For these reasons, you must give up either the notion of the Apūrva being one only, or that of its being the cause of increase and decrease.

(C) "We shall then regard  $Ap\bar{u}rva$  as eternal, and many and belonging to each person separately." If you take up the position that there are many eternal  $Ap\bar{u}rvas$  be-

<sup>•</sup> One and the same thing may be larger and smaller in accordance with the size of its manifesting agency; for instance the same face appears large in a large mirror, and small in a small mirror.

longing to each person,-even then the incongruity does not cease; that is to say, even this last theory is not free from the incongruities that, there would be no possibility of death, and that there would be a cessation of meritorious deeds. "But what produces the result is the manifestation (of the What do you mean by this? Do you mean Apūrva). " that the Apürva produces the result at the time that there is its manifestation? or that the result is produced after the action (producing the Apürva) has ceased ? As a matter of fact, it is never found to be the case that the Apūrva produces its result at the time that it is manifested; for instance, the attainment of heaven does not follow immediately after the Ashvamedha sacrifice [and the manifestation of the Apurva must be at the same time as the action of sacrifice; as the action is the manifesting agent of the Aparva, and in all cases the manifestation is found to be at the same time as the manifesting agency; e. g. the manifesting of the jar by the lamp is synchronous with the appearance of the lamp]. If then it be held that the result is produced after the action (of sacrifice, for instance) has ceased to exist,-then it comes to this that what manifests the Apūrva is the action that is non-existent, and yet it is as aided by this action that the Apūrva produces the result-a truly wonderful view of things! And [if a non-existent action were to manifest an Apūrva, then] there would be no  $Ap\bar{u}rva$  that would be not manifested at any time [as at any particular time we have any number of actions non-existent]; --so that all Apūrvas would produce their results at all times! If, with a keen desire to support your view of the case, you hold every action also to be eternal [so that the action would not be nonexistent at the time of the result ], -even then you do not escape from the incongruities pointed out above; --- i. e. the cessation of all meritorious deeds, and so forth [one meritoriousaction having been performed, as this would, ex hypothesi, continue to exist for all time, and to manifest its Apurva and

bring about its results, there would be no need for the performance of any other act].

Thus then we find that in whatever manner the eternality of *Apūrva* is held, it fails to bear examination.

(Not admitting Word as a distinct Instrument of Cognition, the Bauddha \* philosopher raises the following objection] —"What is the meaning of 'assertion of a reliable person '? Does it mean that the person making the assertion is truthful? or that the fact asserted is true (really as it is averred to be)? If it means the former, then that idea (of the truthfulness of the speaker, and of the consequent truth of his assertion) is got at by Inference. † If, on the other hand, it means that the fact asserted is true,— then this also can be known by Perception; for it is only when we actually perceive the state of things to be as it is asserted to be, that we conclude that the fact is really as it has been averred to be."

This objection cannot be maintained; as it is based upon a misunderstanding of the meaning of the  $S\bar{u}$  tra. The S $\bar{u}$  tra 'Ap to padeshak shabd h' does not mean what it has been taken to mean [*i.e.* it does not mean that 'the word, aided by the reliability of the speaker, makes the object known', in which case alone would it be regarded as *inferential*; nor that 'the truth of the fact averred is known by actually coming by the thing spoken of ', in which case alone could it be regarded as *parception*]; ‡ what it does

\* Dinnāga in Chap. V of his *Pramāņasamushchaya* – vide Satish. Ch. Viyasbhusana', Mediaeval Logic' from which it appears that the objection as found in the Vārțika is a quotation from Dinnāga's work.

† That a certain person is truthful can be learnt only from inference; and when we have come to the conclusion that he is a truthful man, from that we infer that what he says must be true.

<sup>†</sup> It is only after the Word has brought about the cognition of the fact expressed by it, that its reliability is inferred from the fact being actually found to be as averred by the Word. But because the reliability of the Word is inferred, it does not follow that the effect—the cognition-produced by the Word should also be inferred. Nor again is the relation between the Word and its meaning always that of invariable conmean is that, in regard to things connected with the senses, as well as those not connected with them, we have a cognition which we speak of in terms of the *word*—*i*. *e*. of which we speak of in the form 'I have the cognition of such and such a thing by means of words; '—and it is the cognition, thus expressed, that forms the result of the 'Word '(as the instrument of cognition). Thus it is found that the objection urged by Dinnāga is wholly irrelevant.

# SUTRA (8).

The said Word is of two kinds—the Pristartha, that of which the thing spoken of is perceived, and the Adristartha, that of which the thing is not perceived.

#### Внаячл.

# (Page 23, ll. 1-4.]

That 'Word' of which the thing spoken of is perceived in this world is called '*Dristartha*'; while that of which the thing spoken of is only believed to exist in the other world is '*Adristaritha*'. These are the two divisions under which are included all the assertions of sages and ordinary men. "For what purpose does the Sūtra mention these two divisions?" This mention is made so that the other party (either a pupil or a disputant) may not think that what is a valid instrument of cognition is only that assertion of the reliable person which speaks of things that

mitance, whereby every verbal cognition would be always inferential. What happeus in the case of verbal cognition is that the words used are such whose conventional meanings, being well known, are recalled to the mind whenever they are heard; and the meanings of the individual words thus recalled, come to be connected togetherby reason of their proximity, capability and mutual need, — and thus related to gether, they give rise to the comprehension of the connected meaning of the Sentence as a whole. And this process is entirely different from the process of Inference.

• (1) That which speaks of things directly perceived by the Speaker, and (2) That which speaks of things only known to him indirectly, by means of Inference for instance.

are directly perceived, as it is only such things that can be duly ascertained. This idea had to be guarded against, as such assertions also as speak of things not seen are valid Instruments of cognition,; as such things also can be duly ascertained by means of Inference<sup>\*</sup>.

Here ends the section of the Bhāsya dealing with the Instruments of Cognition.

VARTIKA ON SUTRA (8).

[Page 63, l. 21 to page 64, l. 6.]

The declaration (in the Sūţra) that 'Word is of two kinds' is meant to restrict the application of the name; the sense being that, though a 'reliable assertion' may be of many kinds, yet, in the present context, it is meant to be restricted to such assertions only as speak of things that are amenable to Perception and Inference. † Or, the two kinds of Word may be said to be due to the difference in the character of the speakers; as words are found to have both 'dristārtha' and 'adristārtha' speakers; those who speak of things

• If only Words speaking of visible things were reliable, then the Veda would become excluded. Hence it is added that words speaking of invisible things also are reliable. Such invisible things as Heaven and the like can be known by means of Words whose validity can be ascertained only by means of an Inference based upon the fact of their being the Word of 'a reliable person', -i. e. God. And it is for this reason that these things are said to be inferred. This precludes the validity of mere Hearsay, or of the word of persons whose veracity cannot be correctly inferred ; e. g. that of Buddha and others. And it does not mean that the things spoken of in this case are those that cannot be cognised by means of Perception. As Heaven &c., are actually perceived by the sages. When the ordinary man speaks of Heaven &c., his words are 'adrItartha' in a double sense-the thing is one cognisable only by means of words whose validity can be only inferred, and the man speaks of things that he has not seen, but knows by means of words whose reliability he knows from Inference. It is on the basis of this double sense of 'adristarika' that we find the Varika offering a second interpretation of the words 'dristartha' and 'adristartha '-Tatparya.

† 'The former explanation is in accordance with the Bhdyys; the Vartiks next adds another interpretation'—Tapparya. they have seen are 'dristār tha' speakers, and those who speak of things (not seen, but) known by them by means of Inference are 'adristār tha' speakers.

The definition provided by the Sūfra thus applies to sages as well as to Aryas and Mlēchehhas (Bhāṣya, p. 22, line 7-8). This common definition has been provided, and no distinction has been made, for this reason that the activities of all these men are carried on through 'reliable assertions.'

Thus we find that the four described above are the Instruments of Cognition, by means of which the activities of gods, men and animals are caried on (Bhāşya, p. 22 l. 8-9).

Thus ends the section of the Var!ika dealing with the Instruments of Cognition.

LRCTURE (3). The Pramēyas. The Objects of Cognition. [Sūfras 9—22.] BHIŞYA.

[P. 23, 1. 5 to P. 24, 1. 4.]

The  $S\bar{u}_i r\bar{a}$  now proceeds to explain what is to be known by means of the above-described Instruments of Cognition.

Sāļra (9).

Soul, Body, Sense-organs, Things, Apprehension, Mind, Activity, Defect, Re-birth, Fruition, Pain and Release really \* constitute the Objects of Cognition'.

Of these—(1) the Soul is the perceiver (of all that brings about pain and pleasure),—the experiencer (of all pains and pleasures)—the knower of all (pains, pleasures and

<sup>•</sup> According to the Parishuddhi there are two readings of the Satra—one with • fu', and the other without it. We shall see later on (P. 216) how this particle is essential.

their causes)-who gets at all things. \* (2) The Body is the receptacle of the Soul's experiences. (3) The Sense-organs are the instruments of the experiences. (4) The Things are the objects to be enjoyed and experienced. (5) Apprehension consists of the experience (6) † The Mind is that internal organ itself. which is capable of bringing about the apprehension of all things,-which the Sense-organs (being limited in their scope) cannot do. (7) Activity is the cause of the propagation of the body, the sense-organs, the things and the sensing of pleasure and pain; (8) So also are the (9) Rebirth---the body that belongs to the Defects. Soul in one life is not the first that the Soul has had ; nor is it the last; in fact there can be no 'first' in the previous bodies that the Soul has had [as we cannot trace any beginning of the worldly process]; and as for its subsequent bodies, there can be an end to these only when Release is attained ;--and it is this that constitutes *Rebirth*. (10) Fruition consists in the experiencing of pleasure and pain along with the causes leading to these. (11) Pain-by the special mention of ' pain' (and the omission of ' pleasure ') it is not meant that there is no pleasure at all,-which is what is actually felt as agreeable [just as much as Pain is felt as disagreeable]; what is meant is to lay stress upon the teaching that it is desirable that one should practise the thoughtful contemplation of the fact that Pleasure also is only a form of Pain, -- being as it is, along with its causes, found to always end in pain, to be never also entirely free from pain, and to be inseparable from various difficulties; as when one is thoughtful and contemplates upon the said fact, he becomes disgusted ;-this disgust makes him free from all attachment, and brings Dispassion ;-and having become dispassionate, he (12) Release consists in the cessation attains Release. of the series of births and deaths, and the consequent disappearance of all pain.

• If the Soul did not get at all things, it could not know 'all things'.

'The point in which the Soul differs from the other objects is that it is only as the experiencer of pleasures and pains that the Soul is something to be got rid of ( $h\bar{s}ya$ in its own positive form; it is never  $h\bar{s}ya$ , it is always updd $\bar{s}ya$ , to be acquired and treasured; while all the rest—except Release—are always only fit to be got rid of; and *Release* is always to be acquired and treasured.'

<sup>†</sup> There is much uncertainty on the exact nature of manas. The later Logicians regard it as an 'ingriya'; while the Bhdays is not clear on this point. We shall deal with this subject later on, under Manas'.

Though apart from these enumerated, there are many other 'objects of cognition 'also—such as Substance, Quality, Action, Community, Individuality and Inherence,—yet it would be impossible to enumerate all such objects severally; so what the Sütra has done is to make specific mention of only those 'objects 'whose right knowledge brings Release, and wrong knowledge leads to Birth and Rebirth [and it does not mean that these are the only objects that can be cognised.]

VARTIKA.

# [P. 64, l. 7 to P. 66, l. 10.]

The 'Object of Cognition ' is next described-

\*[The Bhāeya puts the question—What is to be known by means of the above described Instruments of Cognition,—with a view to specify the 'objects of cognition', which have been only hinted at, in a general way, in the definition of the Pramānas; and the sense of the  $S\bar{u}tra$  is that the 'objects of cognition ' enumerated are precisely those whose true knowledge brings Release and whose wrong knowledge brings Birth and Rebirth. The compound in the  $S\bar{u}tr\bar{a}$  is *Doandoa*, of which every component is of equal importance.

An objection is raised—"What is the meaning of the  $S\bar{u}_{fra}$ ? Does it mean that the Soul and the rest here mentioned are the only 'objects of cognition'? or that these are 'objects of cognition' only? If the former, then the statement becomes too narrow, as it omits to mention many objects of cognition; such, for instance, as Space, Time, Community, Individuality and Inherence.] If, on the other hand, the meaning is that they are 'objects of cognition' only, then there is a contradiction between this  $S\bar{u}_{fra}$ , and  $S\bar{u}_{fra}$  2-1-16, where the Bhāgya speaks of the Soul &c.' as both 'instruments of cognition ' and 'objects of cognition';

The whole text of lines 10-17 is defective, there being no less than five lacenae. We give within square brackets, the purport of these eight lines, so far as it can be gleaned from the Täjparys and the Parishuddhi.

and in support of this dual character it cites the instance of the weighing balance, in which when weighed, the gold becomes the object weighed; while when some other thing is weighed, and gold is used only as the medinm of measurement, it is the *instrument*; and thus the same gold comes to be spoken of as ' pramēya ' as well as ' pramāna '. And further, such a statement by the Sūlra would be contrary to facts of ordinary experience; in which it is found that one and the same thing is related to actions in more ways than one; for instance, in the case of the tree, we find it spoken of as the agent in the sentence ' the tree stands ' [as an objective in ' I see the tree', as an instrument in 'he sees the moon by means of the tree,' and so on]; and just as in this case we find the names of several verbal-relations applied to the tree, on the basis of the presence, in it, of all the several characters,---so, in the same manner, the same thing (Soul for instance) could be 'prameya' as well as ' pramana' [so that it is not right to say that Soul and the rest are prameyas ' only ]."

The above reasoning is not right; as it is based upon a misunderstanding of the meaning of the  $S\bar{u}$ /ra. What the  $S\bar{u}$ /ra means is that the 'object of cognition', consisting of the Soul and the rest, when duly known and differentiated tends to bring about the Release of the person; and it does not mean that there are no other 'objects of cognition'. Nor would there be any incongruity if the  $S\bar{u}$ /ra were taken to mean that Soul &c. are 'objects of cognition 'only. "What do you mean "?" What we mean is that the  $S\bar{u}$ /ra states that for the man seeking Release, Soul and the rest must be the 'objects of cognition 'only; *i.e.*, these must be known by him; and it is not mean to enjoin the knowability of these [*i.e.* the  $S\bar{u}$ /ra does not lay down that Soul &c. must be

<sup>• &</sup>quot;The incongruity—in the shape of the contradiction of Sū. 2. 1. 16 is quite patent in this case—how then can you say that there is no incongruity in this view ?"

known by all men  $\$ ]; nor is it meant to deny the knowability of other things. All that is done by the  $S\bar{u}/ra$  is to reiterate  $\dagger$  the truth that by one who seeks for Release, these must be known;—*i. e.* for him they must be 'objects of cognition' only. Thus we find that the  $S\bar{u}/ra$  is meant to do both [to state that Soul &c. are the only 'objects of cognition', and also that Soul &c. are 'objects of cognition' only]; and neither of these statements is open to the objections that have been urged.

Even granting the contention of the Opponent against the Saira, we offer the following explanation :---

Space and the other objects also are included in the Sūtra, by the force of implication. "What is the implication ?" . It is this :- There are twenty forms of Activity (the seventh object mentioned in the  $S\bar{u}/ra$ ); and these are affected.-i.e. found to be qualified and borne upon by-Space and Time ; all which therefore are implied ‡ in the mention of 'Activity ;' as for Community, Individuality and Inherence, these are only qualifications of the several Objects mentioned in the Sutra; that is, Soul and the other objects are already mentioned in the Sūtra, and Community, Individuality and Inherence are only relations serving to differentiate the said objects from one another; and as such are included in the Sutra as the qualifications of those directly mentioned.

• ' But only by the pupil who is seeking for Release.'

+ The use of the word 'reiterate' shows that the fact is vouched for by other pramapas also.

<sup>‡</sup> The reading of the printed texts is defective ; as it stands, the sense is that Bpace &c. are not included ; which would be absurd ; as from what follows, and from what the Täiparys says, it is clear that Space and Time &c. are meant to be included. Hence the proper reading should be **are equivaled from the sense** 

Space affects activity, when the Veda lays down a sacrifice as to be performed on a plot of ground sloping eastwards; Time affects it when it lays down the Pürgumäss sacrifice to be performed on the Purgamäsi day.

\* As a matter of fact however, the Sufra does not mean either to indicate all 'objects of cognition', or to indicate those that are 'objects of cognitions' only. If the author of the Sufra had simply meant to indicate the 'objects of cognition ', he would thereby only prove his own inaptitude. by mentioning what has already been mentioned (as implied by the account given of the Instruments of Cognition); and further by mentioning again what has already been mentioned in the very first Sutra (and what is again already implied in the account subsequently given of the Pramanas) the author's statement (in the present  $S\bar{u}tra$ ) would partake of the character of the incoherent ravings of a maniac. It is with a view to all this that the author of the Sūtra has inserted the qualifying particle 'tu'; the meaning of the Sufra thus is that 'though there are other objects of cognition also, yet those that are mentioned (Soul &c.) are those objects of cognition whose true knowledge brings the highest good; this is what is implied by the particle 'tu'.

An objection is raised :—" How is it that Pleasure is not mentioned? Is it because there is no such thing as Pleasure? Or because it is already included in something else? It cannot be the former; as Pleasure is a thing that is known to every living Soul; inasmuch as Pleasure is found to be experienced by every living Soul, it cannot be said that there is no such thing as Pleasure. For the same reason [*i. e.* because Pleasure is actually known as something entirely different from Soul and the rest] Pleasure cannot be held to be included in any of the things mentioned in the Satra."

Pleasure has been omitted with a view to indicate the absence of attachment. "How so?' The man who is seeking after Release should look upon everything as ' Pain;'

<sup>•</sup> The above explanation has been given by the author only to abow his ingenuity; the real explanation is the one aready given above; which he reiterrates -- Td{parya.

and it is for the purpose of laying stress upon the propriety of regarding everything as 'Pain' that the Sutra has omitted to mention 'Pleasure' separately. As a matter of facts when a man regards everything as ' Pain ', he acquires that Dispassion which consists of the absence of attachment to (or indifference for) the entire three worlds : and when the 'absence of attachment' is practised, his longing for all the three worlds ceases; the 'longing' for a certain thing consists in the desire for its return; and naturally no such desire is possible, when the man regards all things as ' pain '; for certainly no one desires Pain ;--all longing having thus ceased, the man does not have recourse to those (activities) that tend to bring back the objects desired; as he does not have recourse to these activities: no further Merit or Demerit accrues to him ; those that have already accrued to him in the past become exhausted through his experiences, and thus ultimately Merit and Demerit, which form the sole cause of birth and rebirth, entirely disappear from the man; and thereupon he becomes 'released'; that is, he is not born again. It is with a view to indicate all this that the Sufra has omitted to mention ' Pleasure'.

#### Soul—The first Pramēya.

# BHASYA.

# [P. 24, l. 5 to p. 25, l. 9.]

• As a matter of fact, it is found that the Soul is not apprehended by Perception; the question then arises as to whether it is known only by means of 'reliable assertion'. The answer is that it is not so; as Soul is cognised by means of Inference also.

In connection with the opening sentence of the Bhdaya, the objection is raised as to why the perception of the Soul is denied, when as a matter of fact, the Soul is

<sup>• &#</sup>x27;That there is such a thing as Soul is known, in a general way, from Reliable Assertion (of the Veda, for instance), and this knowledge is ratified by Inference'— *Taiparya*. 'By being ratified is meant that the vague general cognition is specified ' says the *Parishuddki*. That is, the existence of particular souls in particular bodies becomes recognised.

### SUTRA (10).

# Desire, Aversion, Effort, Pleasure, Pain and Cognition are the indicatives of the Soul.

[A] The Soul having experienced pleasure by coming into contact with a certain kind of things, whenever, in the future, he happens to see a thing of that same kind, he wishes to acquire that thing; and this wish to acquire is possible only in one who, while remaining one and the same, perceives several things; as it arises from his remembrance of a previous perception; it is thus that Desire becomes an indicative (a sign or proof) of the Soul. No such desire would be possible [if there were not one and the same agent to cognise and to recognise the thing, and] if there were only a sories of distinct cognitions, each pertaining to its own distinct object; for the recognition of one cognition by another cognition would be as possible as the recognition by one body of the experiences of another body<sup>†</sup>.

always an object of mental perception, being always perceived as 'I', a conception that appears along with every cognition. The answer to this is that it is true that we have the notion of 'I'; but this might be (and actually is) taken as referring to the body; and as such it could not afford a sufficient proof for the existence of the Soul apart from the body; so long as it is not strengthened and ratified by other means of cognition, Inference &c. This is the answer from the stand-point of one who does not regard the Soul as purely perceptible; the answer from the standpoint of one who regards Soul as perceptible is that the passage refers to the Soul of others, one's own Soul being always perceptible.—[as held by some Logicians, called by Jayanta Bhatta, 'swa@thy@h']—Parishuddhi.

• 'Having found a certain kind of thing to give pleasure, the man formulates the judgment 'this kind of thing gives pleasure', this is the major premiss; when he ees that kind of thing again, he has the idea 'this is that kind of thing '; this forms the minor premiss; from these two premisses he comes to the conclusion 'this will give pleasure'; and then *desires* to acquire that thing. Thus this *Desire* proves that the agent who has this desire must be the same who has the three cognitions represented by the two premisses and the resultant conclusion)—there being a common agent for all the four; if the agent were not the same there could be no such recollection or fusion of the several cognitions involved; and it is this common agent who is the two seer of the thing, the experiencer of pleasure, the rememberer of the thing being the source of pleasure, and the desirer of the thing,—who is the *Soul* '— *Täiparva*.

† 'This anticipates the following argument :---' If in the absence of a Soul, the recollection and fusion of cognitions were possible under the hypothesis of every cognition setting up, and forming a factor in, a series of cognitions; then every cognition would recall and fuse into every other cognition of the same series. Tapparya.

The phrase 'diadafaravaf' is explained by the Bhaqya itself later on-p. 25 ils. 4-6.

[B] Similarly it is only when one and the same agent perceives several things, that, on recollecting a previous perception, he comes to have *Aversion* to the thing that has been the cause of pain to him.

[Q] When a certain kind of thing has been found to be the cause of pleasure, on subsequently seeing a thing of that kind, the man makes an attempt to obtain that thing; and this *Effort* would not be possible if there were not one agent perceiving a number of things and recollecting his past perceptions; specially no such Effort would be possible if there were only a series of distinct cognitions, each pertaining to its own distinct object; for the Effort of one cognition on the basis of the experience of another cognition would be as impossible as the Effort of one body on the basis of the experiences of another body. This explanation also applies to the Effort that is put forth for the getting rid of what has been found to be a cause of pain.

[D and E] It is only by reason of his remembrance of his previous experience of pleasure and pain that when the man gets by the thing that had caused him pleasure he is pleased, and when he gets by what had caused him pain he feels unhappy; and thus it is that he experiences *Pleasure* and *Pain*. And in this also the reason is the same as before [that is to say, the said pleasure and pain is possible only when the person getting by the thing and remembering the previous experiences is the same who had had those experiences; and this proves the Soul as the experiencer of I'leasure and Pain in the past, their rememberer and their experiencer in the present].

[F] When a man is desirous of knowing or understanding (the real character of a certain thing), at first he ponders over it in the form—' what may this be ?'; and pondering thus he comes to know it in the form—' this is so and so'. This Knowing of the thing is by the same agent as the previous desire to know and the consequent pondering;—so that this Knowledge becomes an indicative of the presence of the common agent in the shape of the 'Soul'. And here also the reason is the same as before.

Now we proceed to explain the phrase 'ddhaniaravai 'as in the case of another body', [that we have used twice before, p. 24, l. 11 and l. 141:—The philosopher who does not admit the Soul readily admits that the diverse, Cognitions, each pertaining to a distinct object, when appearing in different bodies, are never recognised [and never fuse together, the cognitions of one body not being recognised by another body]; and for the same reason the diverse cognitions, appearing in the same body also, could not be recollected; the two cases being for the said philosopher exactly alike, [so far as the absence of the common agent is concerned; there being no such agent in either case]. Thus then, with regard to a single agent we find that he recognises only what he has perceived, and not what he has not perceived • [or what has been perceived by another]; similarly with regard to diverse agents also, we find that one agent does not recognise what has been perceived by another; neither of the these two well-known facts can be adequately explained by the philosopher who does not admit a *Soul*.

Thus it is proved that there is such a thing as Soul.

VARTIKA ON SUTRA 10.

[Page 66, line 11 to P. 71, l. 4]

Sūţrā 10 is put forward—(a) with a view to differentiate the Soul from what is homogeneous to it (i. e. other *Pramēyas*, Body, Sense-organs &c.) as also from what is heterogeneous to it (i. e. the *Pramāņas*) ;—(b)  $\dagger$  also with a view to ratify (or specify) by means of Inference what is already known by means of Word (of the Scriptures): i. e. with a view to strengthen the knowledge of [or to specify the cognition of] the Soul that has been known in a general way by means of Reliable Word ;—(c) and lastly also with a view to show an instance of the commixture of several Instruments of Cognition: We have said above (in the *Vārțika*, Text, pp. 31-32) that in many cases several Instruments of Cognition commingle ; and the case of the Soul is one of those cases [where we find the commixture of Word and Inference].

• The text reads **ungers** ungeria ; and the foot-note remarks that ungeria is not found in three of the four manuscripts. But from the contex it is clear is that what is necessary is the clause **ungeria**, and it is the other clause **ungers**, which is superfluous, in view of the next sentence; where the perception and remembrance by different agents is spoken of.

† The particle ' cha ' here means ' and '----- says the Tatparya.

Says the Bhāşya (P. 24, 1. 8)—The Soul having experienced pleasure by coming into contact with a certain kind of thing, whenever, in the future, it happens to see a thing §c. §c. The sense of this is that what proves the existence of the Soul is the \* 'recollecting' or 'blending' of Desire and the rest (the cognitions and recognitions leading up to it).

"In regard to this", says the Opponent, "we have to consider the following dificulty : [In every case of Inference the indicative proves the conclusion only when it is itself perceived] how, then, can Desire and the rest prove the Soul, when they are themselves not perceived ? †"

[They prove the existence of the Soul] because they pertain to the same object as the Recognition ; that is to say, because Desire and the rest have the same object as the Recognition, they prove that all the cognitions appearing in the Recognition have a common agent; it is a well-known fact that no 'recognition 'of cognitions is possible, (a) when these cognitions have different agents, or (b) when their objects are not the same, or (c) when they are brought about by different instruments. For instance-(b) in no case do we find a 'recognition ' of the cognitions of colour, of taste, of odour, and of touch : as there is never any such recognition as ' this touch that I feel is the colour that I had seen ';-----(c) nor again is there any such recognition as 'that by means of which I see 'colour now is that by means of which I had felt its touch ;---(a) nor lastly is there recognition by Yajñadatta of what had been seen by Dēvadatta : there is never any such recollection as ' this that I, Yajñadatta see, is the same

<sup>•</sup>The Parishuddhi explains the word 'praficandhana 'as the blending or fasion of (1) the previous cognition of the thing, (2) the remembrance of the pleasure, caused by it, (3) the subsequent cognition of the thing, (4) and the consequent Desire —into a single conception comprehending all the four ideas as belonging to one and the same agent.

<sup>+</sup> Desire, Aversion, and Effort are not perceptible.

thing that Dēvadațța had seen.' And what is the reason for all this? The simple reason lies in the fact that each cognition has a distinct object of its own. Thus then, for one who denies a Soul, every cognition must be \*distinct, with a distinct object of its own; and no 'recognition' or 'recollection' would be ever possible. Hence the conclusion is that there is a single agent who recognises; and this is the Soul.

You will perhaps offer the following explanation :- " The fusion or recognition of the several cognitions (in a series) will be due to the fact of the preceeding cognition being the cause of the following cognition. That is to say, the 'recollection ' or ' fusion ' of the several cognitions is due, not to the fact of all of them having a common agent, but to the fact that, in any series of cognitions (to which every cognition gives rise), every individual cognition is the cause of the cognition that follows; as a matter of fact, every cognition is followed by another cognition, this latter proceeding from a certain potency in the preceeding cognition,-and is itself endowed with all the potency (that belonged to the previous cognitions); and thus even though the cognitions are diverse and many, there is a 'fusion 'by reason of the relation of cause and effect subsisting among them; just as there is in the case of the seed : in the case of seeds, we find that the small grain of paddy is followed by the sprout; and the sprout, by reason of its having followed from the paddy-seed. is endowed with the potency of the paddy; and from this sprout by the aid of the several elemental substances, is produced only another grain of paddy, not a grain of barley : and the only reason for this lies in the fact that what has gone before is a paddy-grain, and not barley ; [so that there is a recognition of the grain of paddy] ;---in the same manner. in the case in question also, there is a 'fusion ' or ' recogni-

<sup>•</sup> The 'na ' in the text is evidently wrong ; as this sentence is meant to be explanatory of the preceding sentence ; while with the ' na ' it would be a direct contradiction of it.

tion' of several cognitions only when they appear in the same series of cognitions',—so that there is a causal relation among them, every one of them being the effect of that which precedes it; and there is no such 'fusion 'when the cognitions belong to a different 'series'; as in this latter case, there is no necessary sequence (and consequent causal relation) among the cognitions. Thus the 'fusion' is due to the presence of causal relation, and not to the presence of a common agent; for the simple reason that we do not know of any instance where there is 'recognition' due to the presence of a common agent [while of 'recognition' due to causal relation we have an instance in the case of the Seed]; and thus the 'Recognition' (that has been urged as the reason for the existence of the Soul) having been found otherwise explicable, it cannot prove the existence of the Soul \*."

† The above reasoning is not sound, we reply. As it does not remove the diversity: That is to say, when you declare that the 'recognition' is due to the causal relation, you do not set aside the diversity among the cognitions; and this for the simple reason that causal relation itself subsists on (*i. e.* presupposes) diversity; it is upon diversity that every causal relation depends;—and in cases where both parties admit diversity (among the things concerned) no 'recognition' is found possible. Why not ?—you will Vār Page 68. Well, in a case where the cogniser is not the same as the rememberer (in which case the diversity

• The import of this objection is thus explained by the *Tatparya*—Between the cognitions of Dëvadaţţa on the one hand, and those of Yajfadaţţa on the other, we find two differences : they have different agents, and they are not the cause of each other. We also find that there is no 'recognition' of the one as the other. The question then arises—Is this absence f 'recognition' due to the first difference, or to the second ; and as there is nothing to determine the exact answer to this question the inference drawn (as it is by the *Bhāgya*) from 'recognition' can not be conclusive as to the difference or non-difference of the agents.

+ The Tapparya remarks that the Siddhauti purposely keeps his real explanation hidden from the Opponent. The real explanation is clearly given in the Varjika, Text, p. 68, 1.11. of agents is admitted by both parties), no remembrance is possible; and when there is no remembrance, there can be no 'recognition.' [Hence so long as the causal relation does not do away with diversity, it cannot form a basis for 'recognition'].

"" What we mean" the Bauddha explains, "is that no "recognition' is possible; and we do not say that 'recognition' is found where there is causal relation, all that we say is that where there is no causal relation, no recognition is found; and the reason that we have put forward for this absence of recognition is the fact that there is no necessary sequence (in cases where there is no causal relation). Thus your complaint against our reasoning is absolutely futile and meaningless".

This explanation is not right; as it does not really meet the question at issue. In explaining your position in the way you have done you do not meet the real point at issue : I have said 'where there is diversity', recognition is not found; and you say \* 'when there is diversity, on account of the absence of causal relation, recognition is not found'; and your statement in this form is of such doubtful import that it does not at all set at rest the question at issue. " Well the same is the case with yourself : when you simply assert, that 'recognition is not found when there is diversity,' you do not meet the point in dispute." This answer of yours is no answer at all; when you say that my statement is similar to yours, you admit that your own statement does not meet the point in dispute.

"Not so", says the Opponent; "as what I have put forward is not meant to be a reason; that is to say, I do not mean that 'there is Recognition *because there is causal relation*'; all that 1 mean is that the Recognition, that you have

• The ' na' in the text is wrong : the opponent does say above ' wurduncywrd

put forward, can be explained otherwise (than on the basis of what you seek to deduce from it); and hence it cannot serve as a valid reason for deducing what you seek to deduce from it; and thus all that I mean is to point out the fallacy involved in your reasoning; and I do not mean to put forward another reasoning in the form that 'there is recognition because there is causal relation', or that 'there is no recognition because there is no causal relation']."

• Even so your argument is not tenable. For you have failed to grasp the import of the reason (Recognition) put forward by us (in support of our conclusion). Evidently the true import of our reasoning has not been comprehended by you; you have been misled by the generalised form in which our reason has been asserted; that is why you find, with it the fault that it is explicable otherwise (than on the basis of our conclusion). The 'Recognition 'that we have put forward as our Reason is a qualified Recognition (and not mere Recognition in general); what we mean is that particular kind of Recognition which apprehends a certain thing as the common object of the previous cognition, of the present cognition and of the remembrance. † And no such remembrance or Recognition would be possible under your theory [where nothing is admitted except the 'series' of cognitions, and where everything having a momentary existence, any form of 'Recognition' is an "Why so?" Simply because-§(a) there impossibility.

• The real answer of the Logician to the Bauddha objection begins here.

↑ The Recognition is in this form—' that source of pleasure in the shape of garlands, sandal paste and the like, which I remember, is the same that I am perceiving now'. The Recognition appearing in this qualified form differs materially from that Recognition which depends upon causal relation; as in this latter kind of Recognition there is no remembrance.—*Tatparya*.

t 'The proving of the momentary character of things means the disproving of all Recognition' says the *Partihuddhi*.

§ There is no recognition in any of the following forms—(a) 'I am touching this thing with the same organ of touch by which organ of vision I had seen it'; (b) 'This that I am seeing as the jar is the same as the cloth that I had seen '; or (c) 'I recognize this which had been perceived by my friend.'

224

is no recognition by one sense-organ of what has been previously apprehended by another;—(b) because there is no recognition in one form of what has been apprehended in another form;—and (c) because there is no recognition by one person of what has been previously apprehended by another person. [And under the Bauddha's theory of momentary existence, each cognition being distinct, no form of Remembrance would be possible]. And yet in the case cited by us, Remembrance does take place; which proves that Recognition is possible only under that theory under which there is Remembrance [and not under that under which there is merely causal relation.]\*

What you say is not possible, we reply; firstly because all cognitions are transient; and as a rule it is only something lasting for some time that can be impressed upon by an im\_ pressing agency†;—and secondly because of the absence of

<sup>o</sup> In the case of the cloth and the yarns composing it, where causal relation is distinctly comprehended, there is no Recognition ; there is no such idea as that 'this cloth is the same as the yarns'.

'The conclusion thus is that for the proving of the existence of the common agent in the form of the Soul, we have a flawless Reason in the shape of the Recognition of an object as the same that was seen, is seen and is remembered.'-Täiparya.

The Opponent having failed to grasp the import of the former explanations, the Author proceeds to convince him of the existence of the Soul by means of a nother set of reasonings: ' Every cognition is momentary; when it disappears it disappears connection : as a matter of fact, it is only when there is some connection between the two that one is impressed by

Var. Page 69. the other ;\* while (under your theory) the cognitions (all appearing at different points of time and disappearing as soon as appearing) can have no connection with any impresser [so that, there being no impression, no Remembrance is possible].

**†** "The *impression* consists only in the production or appearance of a sensation endowed with a certain potency; that is to say, as a matter of fact, from a particular consciousness, which is produced along with a previous sensation, there follows another sensation, which is endowed with the potency of its predecessor; and the appearance, with this potency of this latter sensation, in the Consciousness, is what is called 'impression' [and this is quite possible under the theory of 'momentary cognition.']."

We have already answered this by pointing out that no such thing is possible; because Cognitions are transient, and because (as such) they can have no connection with any

entirely, leaving an impression of itself behind; and it is through the agency of this impression that the subsequent remembrance appears; it is absolutely essential for this process that the rememberer should continue to exist from the time of the cognition up to the time of the remembrance. According to the Bauddha however no such lasting entity is possible; as he admits of nothing else except a series of momentary cognitions'.—*Tätparya*.

• The reading should be 'samesaddham', not 'asambaddham'; as the sense a pparently is that as a rule the impresser is always connected with the impressed.

+ The Bauddha view is thus explained in the Tatparya :--

The 'previous sensation' is that cognition which sets up the 'series of cognitions'; this is of six kinds—five related to the five organs of sensation, and the sixth the cognition of attributes. From the previous sensation there follows, coeval with it, that particular Consciousness og 'stream of cognitions', which is known as 'âlayavijfiāna', or 'Basic Consciousness'; from this comes the next sensation which is endorsed with the potency of remembrance, in the form of the 'Iidea.' Though this is nothing spart from the sensation itself, yet it is regarded as 'potency' only figuratively, for the purpose of explaining the phenomenon of abrence.

impression. Then again, \* that 'particular consciousness', which you hold to be coeval with the previous cognition, cannot afford any help either to the sensation appearing at any present moment, or to any that appears at some future time; because (according to you) the cognition that appear at the present moment appears in an immaculate form, and also disappears exactly in the same form in which it appears [so that it cannot be affected by the 'particular consciousness']; and as for any futu: e cognition, no ' particular consciousness ' could be regarded as having any connection with what is yet to come; and it cannot affect, or impress, that which is not connected with it. Thus we come to the conclusion that your assertion-that ' Remembrance proceeds on the basis of causal relation '-shows that you have not been taught the real meaning of Impression.

There is yet another reason why no Remembrance is possible under your theory [that there is no Soul, and every phenomenon depends upon causal relation among Cognitions] :-- As a matter of fact, every bhava, (lit. becoming, i. e. condition or quality), stands in need of a bhavitri, the becomer ; i. e. the thing to whom the condition or quality belongs: every becoming must require a becomer, because it is of the nature of an action,-like the action of being produced. Tn accordance with this inference, Remembrance, being of the nature of a becoming, must require a becomer ; and in the case of Remembrance this becomer may be ither in the form of an objective (the object remembered), or in the form of an agent (the person remembering); that the becomer of an action has these two characters is shown by the fact that in the action of the 'cooking t of rice' the becomer is the rice, which is the

<sup>•</sup> This anticipates the following argument of the Bauddha—" Even though the two cognitions are transient, yet, when they appear at the same point of time, there is some connection between them; and through this connection one cognition would be impressed by the other, and thereby bring about it. remembrance."

<sup>†</sup> According to the Taiparya, the reading is 'pakah', not 'pschakah'; and the ) also demands 'pakah.'

object cooked [as the condition of being cooked belongs to the rice, and not to the cooker ]; while in the case of the action of 'walking' by Devadatta, the becomer is Devadatta, who is the agent [as the condition of walking belongs to the man who walks |. Now so far as the action of Remembrance is concerned, the becomer cannot be of the nature of the objective, as there is remembrance of absent things also; if the becomer of Remembrance were its object, then at the time that one remembers an object that does not exist at the time, the Remembrance would be entirely baseless (its becomer being non-existent); it could certainly have the agent for its substratum; but this would be possible only under our theory, and never under yours; for the simple reason that you do not admit of any such thing as 'agent' (the 'stream of cognition' being all that you admit); as a matter of fact, you do not admit an 'agent' for the action of Remembrance; so that under your theory (when one remembers an absent thing) the Remembrance must be baseless. And if you admit this position [that Remembrance is baseless], then you are met by the following (inferential) reasoning : \* ' Remembrance can never be baseless.---as no effect is ever found to be baseless : as a matter of fact we find that every effect-such for instance, as Colour-subsists in a substratum ; and Remembrance is an effect :--- hence Remembrance must have a substratum [and it can never be baseless]'.

"The names becoming and becomer may be applied to Effect and Cause respectively; *i. e.* the 'Effect-moment' (the moment at which the Effect appears) is the becoming, and the 'Cause-moment' the becomer. What then is the necessity of postulating a becomer (in the shape of the Soul) apar from these ?"

This cannot be right; because of the difference in time; as a matter of fact, the Cause and the Effect

<sup>•</sup> This is the answer given by the Author on the basis of the momentary character of thinge; *i. e.* from the standpoint of the Bauddha himself. The answer from his own standpoint he gives below, line 20 *et seq*.

**VĀRŢIKA 1-1-10** 

exist at different points of time; so that neither of the two could ever be the substratum or container of the other; as in the case of the bowl and the jejube fruit, [we find that the bowl is the substratum of the fruit, only when the two are present at the same time, and when the bowl has a certain degree of continuity of existence, whereby it acts as an obstacle to the action of gravity which tends to the downward fall of the fruit, and thereby becomes its 'substratum'].

The Opponent may state his case as follows :—\*\*\* Becoming is nothing more than being produced, and the Becomer is that which is produced; that is to say, because Remembrance is something that is produced, its production would be its 'becoming'; and the Remembrance itself would be the 'becomer' [and as such not

require a further 'becomer' in the shape of the Soul |".

This also cannot be; because it involves a self-contradiction, and implies a contingency which you do not admit. If you hold the production to be something different from the *Remembrance*, then you fall into self-contradiction; for you will have to point out the distinctive features of such ' production ' [and this pointing out will land you in self-contradiction]; as you do not accept the production to be anything distinct from the thing produced. That is to say, if you hold the production to be different from the thing produced, it becomes necessary for you to describe the distinctive features of *Production*; and when you describe these features, you go against your philosophy. You will perhaps ask—why so? Well, the ' production ' of a thing could be explained only, either as ' the connection of the thing with the existence

<sup>&</sup>lt;sup>•</sup> Remembrance is not a *becoming*, a quality; in fact it is itself a *becomer*, a thing; and the *being produced* of Remembrance is its 'becoming'; so that being itself a *becomer*, Remembrance does not stand in need of another *becomer* in the shape of the *Soul*. The postulating of a *becomer* for what is itself a *becomer* would lead to a vicious regress.

of its cause, 'or as 'the existence of the thing as qualified by the connection of its cause '; and both these are contingencies not \* accepted by your philosophy [as both involve the more than momentary existence of the Cause and the Effect]; and this is the 'self-contradiction' (mentioned by us).

If then, [with a view to escipe from this selfcontradiction] it be held that the *Production* is not different from the *Remembrance*, †------then, which (of the two) would subsist in which? In fact, in this case, your assertion—' the *production* is the *becoming* and the Remembrance is *that* which is produced (the becomer)'—becomes absolutely meaningless.‡ Such an assertion can have some sense only in case production is the 'becoming' or 'property' of Remembrance [and not when both are identical].§ And when Remembrance itself is a 'becoming,' it must have a 'becomer'; for the simple reason that every 'becoming ' must have a 'becomer', as we have already pointed out.

Thus it is found that under the Bauddha theory, there can be no Remembrance; and when there is no Remembrance, there can be no Recognition ;—but Recognition is a fact ; hence the inevitable conclusion || is that that which is the

§ The **F**Siperys adds—Even so the assertion, 'Remembrance is the *becomer* and Production is the *becoming*', could have some sense; that is all. It could not, however, save the opposent from the necessity of admitting the permanent Soul; as even though the production is the 'becoming' of the Remembrance, yet it does not follow that Remembrance, in its own turn, can never be a 'becoming'; specially as every effect can be a 'becoming'; and Remembrance is certainly an effect. Nor does this mean an *utilitie regress*; as the series ends in the *Soul*, which is a permanent entity, and not an *effect*. Thus of Remembrance, as a 'becoming', the sternal Soul is the 'becomer'.

<sup>&</sup>quot;The reading demanded by the sense is 'ave wivgunay"

The reading demanded by the sense, and countenanced by the Talparya should be-'an upface facture for the sense of the sens

**<sup>‡</sup> As Bemembrance and Production being ex hypothesi identical, how can one** subsist in the other ?

agent of this Recognition is something quite distinct (from Cognitions and Series of Cognitions), and this is the single entity of the Soul.

\*We may also explain the Sutra as containing a 'positive Inference', or 'Inference per affirmation':-Devadatta's cognition of colour, taste and touch must have one as well as many causes, +---because they are all recognised, as 'by me,' along with the remembrance of the same objects ;--exactly as it is found in the case of the single glance of the dancing girl, on looking at which several cognitions appear simultaneously in the minds of several experienced persons knowing [through their study of Bharata's Natyashastra] the signification [of every gesticulation]. That is to say, in the case cited. as the cause is one only,-in the shape of the glance ; thus even though the cognitions are several and by several persons, yet they are all recognized as having been brought about by a common cause ; in the same manner, in the case under consideration, as the cause, in the shape of the agent, Devadatta, is one only, his cognitions (of colour, taste and touch), even though several, will be recognized as by a common cause :---and this common cause is the Soul.

### II.

[Having proved the existence of the *Scul* on the basis of the *Recognition* that is involved in Desire, Aversion &c., the  $V\bar{a}r_{ika}$  proceeds to prove the same on the basis of the idea that, Desire and the rest being *qualities*, must have a *substance* in which they would subsist].

recognised,—e g. the Remembrance by Dévadațța is never recognised as having the same object as the Yajfiadațța's cognitions,—the Remembrance in question however is not not-recognised,—hence it must have a common agent with the cognitions.—Tātparya.

<sup>•</sup> The 'negative inference' proving the existence of the Soul has been shown in the preceding note; in accordance with the Bhāşya. The Vārţika next proceeds to show the 'Inference per affirmation,' in support of the same conclusion, —as deducible from the Sūţra.

<sup>†</sup>In the present context it is the presence of one common cause – the common agent—that is wanted to be proved; but in order to make the judgment perfectly correct, the author has added the many causes ' also; these many causes consisting of the several distinct objects cognized.—Tatparya.

Some people have explained the Sūtra-' Desire ..... are indicatives of the Soul '-in a different manner. Desire and the rest are all qualities; and it is a well-known fact that qualities subsist in something different from themselves. That Desire and the rest are qualities is proved by an ' In. ference per residue', as follows :---(a) Desire &c., being non-eternal, can be neither Community, nor Individuality, nor Inherence (all which are eternal);—(b) nor can they be Substance, or Action, as they, like Sound, inhere in an allpervading \* substance [and Substance cannot inhere in Substance, and Actions do not always inhere in all-pervading substances]; and so on there are many similar reasonings that could be deduced, which go to make up the ' Inference per residue.' [that proves that Desire &c. cannot be any thing else but Qualities]. All this goes to prove that Desire and the rest must subsist in something distinct from themselves, because they are non-eternal, and because they are effects, like Colour and other qualities. Then, inasmuch as it is a well-known fact that the qualities that belong to the Body continue as long as the Body remains in existence,---and as Desire and the rest are not found to so continue,-they can not be regarded as qualities belonging to the Body. And being precluded from belonging to the Body,

• The reasoning is put here in a condensed form ; it contains the sense of several reasonings (as mentioned towards the end of this passage). The full import of this reasoning has been thus explained by the Taiparya and the *Parishuddhi* : -

Because Desire &c. are non-eternal, they must inhere in a substance ;-where a mere ' substance ' is sufficient to form the substratum of Desire &c., there can be no justification for asserting that their substratum should be such as is made up of several component parts ;-hence we conclude that the substance in which Desire &c. inhere is one that is not made up of component parts ;-such impartite substances are of two kinds : some are all-pervading, while others are stomic ;-Desire &c. could never inhere in an atomic substance, because they are non-eternal, and they are perceived by us ; while no qualities of the atom can ever be perceptible to us ordinary human beings ;...hence the conclusion is that they inhere in an all-pervading substance. Why they cannot inhere in the non-pervading or limited substances, Earth , Water &c. is shown in the next Note.

Downloaded from https://www.holybooks.com

they must subsist in the Soul. \* Thus the existence of the Soul is proved by an 'Inference per residue.'

Body—the Second Pramēya.

Внаяча.

[P. 25, l. 10 P. to 26, l. 2].

+ The receptacle of the Soul's experiences is----

The Body, which is the vehicle of actions, of sense-organs and of objects.<sup>‡</sup> (Sūțra 11).

(A) "How is the Body the *vehicle of actions*?" With regard to things that the Soul desires to obtain or to discard, there arises in the Soul the desire to obtain, or to discard it respectively; urged by this desire, the Soul puts forth exertion embodying the operation of the means for obtaining or discarding it; and that wherein this exertion appears is the *Body*.

(B) "How is the Body the vehicle of sense-organs?"

That thing alone can be regarded as the vehicle of the sense-organs by whose benefit the sense-organs are benefited, and by whose injury they are injured,—and being according to this benefit or injury, they act upon their objects good and bad ;—and such a thing is the Body.

"How is the Body the vehicle of objects?" That is to be regarded as the vehicle of objects in which receptacle

• The other items in this 'Argument per residue' are thus supplied by the *Tatparya*.—'Desire &c. cannot be the qualities of the five elementary Substances, Earth, Water &c.; as, if they were so, they would be common to all men: the desire of one man would be the desire of all men; just as the odour of the earth is perceived by all men; ——they cannot be the qualities of the Mind; as the Mind is found to be the instrument that produces them; —nor could they belong to Time and Space, as, if they belonged to these, then also, they would be common to all men. Hence the only substance to which Desire &c. can belong is the Soul.

[For further discussion on the Soul the reader is referred to Sutra 3-1-28].

<sup>+</sup> As the Body is the receptacle of the Soul's experiences of pleasure and pain, it lies at the root of the series of births and rebirths; hence its treatment comes next after the Soul.'-*Tapparya*.

<sup>‡</sup> According to the *Bhāşya* and the *Vārţika*, this Sūţra contains three definitions of the Body—(1) it is the vehicle of the Soul's actions; (2) it is the vehicle of the Soul's sense-organs ;—(3) it is the vehicle of the Soul's\_objects. Some philosophers have takes the Sūţra as providing a single definition—' it is the vehicle of actions &c. &c. ". This is rejected by the *Vārţika*. there appear the feelings \*of pleasure and pain caused by the contact of the sense-organs with those objects ;—and such a receptacle is the *Body*.

## VABŢIKA.

[P. 71, l. 6 to P. 72, l. 12.]

"The Body is the vehicle of actions, of sense-organs and of objects—says the Süfra. Now what is Action †?

By 'action' in the present connection is meant only a motion, an activity, for the purpose of obtaining what is beneficial and discarding what is injurious. That is to say, when one comes across something that has been the source of pleasure (in the past), he is moved by a desire for obtaining that thing; and the movement that follows from this desire is what is meant by 'action' (in the Sūțra); similarly when one comes across something that has been the source of pain, there is an activity in the shape of a movement towards the discarding of that thing; and this movement constitutes what is meant by 'Action'.

•The word **utatite** in the pointed text appears in the wrong place. The • Pandit ' edition places it after **gug:ud**:; This gives a better sense and has been adopted in the translation. In the other reading it is not possible to find a reasonable construction for **gug:ud**:

The Opponent puts this question, in view of the following difficulty:—The definition of Body as the rehicle of action is both too wide and too narrow; the tree also is a vehicle of some action, while it is not a body; similarly the frog embedded in stone has body, which is devoid of all action.

The answer is that the word 'action 'does not stand here for any and every action ; but only for that action which is excited by a desire for the obtaining and discarding of the beneficial and the injurious taing respectively. So that the definition cannot apply to the action of trees, which have no desires. As regards the body of the frog embedded in stone, though it has no action at that time, yet it has the capability of such action ; as no sconer does the frog come out on the stone being broken, its body acts in the same way as all other bodies do. Our bodies also are not always acting ; all that the Sütra can mean is that the Body is sapable of action ; i.e. when such conscious action appears it does so only in a body.

The Parishuddhi defines chiefs as that activity which is brough about by the contact of the Soul that is moved by exertion. "How can the Body be the vehicle of sense-organswhen as as a matter of fact, sense-organs either subsist in their own cause, or do not subsist in anything at all? That is to say, those sense-organs that are products subsist in their own cause; while those that are not products do not subsist in anything. For instance, the organs of smell, of taste, of vision and of touch are products, while the organs of hearing and Mind are not products; and not one of these organs —beginning from the organ of smell down to the Mind—subsists in the Body. Under the circumstances, it is not right to assert that the Body is the vehicle of sense-organs."\*

What we mean by the Body being the vehicle of senseorgans is that the sense-organs follow the changes of the Body. We do not mean that the Sense-organs subsist in the Body in the sense that the Body is the container and the sense-organs the contained; all that we mean is that they subsist in the Body in the sense that they are affected by the benefit and injury of the Body; that is to say, the Sense-organs are benefited by the benefitting, and injured by the injury, of the Body;—this is all that is meant by the Body being the vehicle of the sense-organs. Thus the objection urged by the Opponent has no force.

This same explanation applies to the assertion that the Body is the vehicle of objects. How so ? For the following reason :---What is meant is not that the 'objects '---smell and the rest---subsist in the Body (in the sense that the Body is the container of smell &c.); what is meant is that the 'purpose 'or 'function ' of smell &c.---which consists in their being the cause of the experiences of pleasure and pain---is not accomplished except when the Body is there ; and it is in this sense that smell &c. are said to have the Body for their vehicle ; just as the villagers are said to have the proprietor

The Tatparya adds that if by 'subsistence' it be meant mere conjunction, and no inherence' then the jar also would be a body ; as the jar is often in contact with sense-organs.

of the village for their '*āshraya*' [which means that they are the cause of bringing pleasure and pain only when the proprietor is there to experience them; and it does not mean that they are *contained* in the proprietor].

"As a matter of fact we find the  $S\bar{u}!ra$  using the general terms 'action' ('Sense-organ' and 'object'); how then can they be interpreted in the restricted sense that you have given them [of 'action ' for the obtaining of the beneficial and the discarding of the injurious, and so forth]?"

Our answer to this is that general terms are found to have their signification restricted by their force ; this ' force ' consisting in the peculiarity of the context and. so forth. For instance, when the assertion is made 'feed the Brāhmanas' [where the general term ' Brāhmanas' is used, which signifies all Brāhmanas) -----as it is absolutely impossible for all Brahmanas to be fed, the word is taken to mean a particular Brāhmana, who happens to be in closer proximity (than other Brāhmaņas) to the speaker, and who, on that account. is more nearly related to the context. In the same manner the words 'action' and the rest also, though used in their general forms, become restricted in their significations by the force of the attendant circumstances [which make the wider signification impossible |. The 'force' that thus alters the denotation of words is twofold-(1) popular usage bearing on the subject spoken of, and (2) certain inconsistencies, or incongruities. And in the case in question we find that in popular usage, the word 'action' is never used in the sense of action in general; whenever it is used, it is used always in the sense of some particular action; e.g. all such words as ' spandate', ' sarpati', ' dhāvati ' and the like,-though denoting activity in general-are always used in the sense of some particular form of activity; exactly the same is the case with the word 'chesta' used in the Safra. Even if we accept\*

<sup>• &#</sup>x27;The particular 'api' denotes-sven if we grant it'---- Tatparya.

the word '*chēştā*' to be denotative of action in general, we shall have to regard it as denoting a particular action, in view of certain incongruities (arising from the word being taken in its general sense); and by reason of those incongruities, " it will not be right to take it in the sense of action in general; [the incongruity in the present instance consisting in the fact that] the vehicle of any and every action could not be entitled to the name 'Body;'—and that, it is only when we take the word '*chēştā*' in the restricted sense, that we can avoid the absurdity of the definition of Body (as the vehicle of action) applying to the jar and such other things [everyone of which is the 'vehicle ' of some sort of action in general].

*†* The explanation that we have provided serves to set aside the view that the definition applies to the jar and such other things,—if made to consist (severally) of the first word [or of the second word, or of the third word]. Further, those who admit the force of the contention that the definition (consisting of each of the words taken severally) becomes applicable to the jar &c., propose to take all the three expressions (vehicle of action—vehicle of sense-organs—vehicle of objects) as collectively forming a single definition of Body ;—but even so they cannot prevent the definition from applying to atoms [which being the constituent cause of sense-organs and objects, and being the vehicle of many actions, are the 'vehicles' of all these].

+ flaving given the sense of the Sūţra from the standpoint of the *Bhaya* and of himself, the Author takes up the interpretation suggested by certain writers that the Sūţra does not contain *three* definitions (as held by the Bhāsya); but it constitutes a single definition. This view is thus explained :--(1) If the first word alone --'vehicle of action '--be taken as the definition of 'Body', it applies to the jar, which is the vehicle of some action ;--(2) if the second word--'vehicle of senseorgans'--is taken as the definition of Body, the word 'vehicle' meaning that which is in contact, the jar would be a Body, as it is in contact with Sense-organs;--(3) lastly, if the thir4 word--'vehicle of objects'--be taken as the definition, it will apply to the jar; as the jar is the vehicle of many such objects as colour and the like.

All this is set aside by the explanation that we have given as to how the jar &c. are excluded from the definition.

<sup>\*</sup> The Tatparya reads an additional ' Thurma After und

As for our own view of the definition, we have already shown how it does not apply to any thing except the Body.

#### The Sense-organs-Third Prameya.

### Внаяча.

## [Page 26, L. 8 to P. 26, L. 10].

\* The instruments that bring about the experience (of pleasure and pain) are---

The Olfactory, the Gestatory, the Visual, the Outaneous and the Auditory Organs, proceeding from material substances. (Sūțra 12.)

That by whose instrumentality one smells things is the Olfactory Organ; so called because it apprehends odour. That by whose instrumentality one tastes things is the Gestatory Organ; so called because it apprehends taste. That by whose instrumentality one sees things is the Visual Organ; so called because it apprehends colour. That which is located in the skin is the Cutaneous Organ; so called indirectly because of its location. † That by whose instrumentality one hears things is the Auditory Organ; so called because it apprehends sound. Thus from the force of the literal signification of the names, we learn that the senseorgans are to be defined as the apprehenders of their respective objects.

• 'The sense-organs being the presenters [as they serve to bring before the Soul through the body, definite objects, which become the source of pleasure and pain— Parishuddhi], they differ, 'in this respect, from the objects that are presented; and as such they have to be defined before the Objects. As the Sūţra only provides the definitions of the particular organs,—and as these particular definitions are not intelligible until we have the definition of 'Sense-organ' in general, the Bhāṣya in this introductory clause, supplies this general definition. The general definition should have been stated in the form that the sense-organs are the instruments by which direct cognitions are brought about; but it is with a view to excite disgust against the organs (along with every thing else), that the Bhāṣya speaks of them as the 'instruments of the experience of pleasure and pain.'—Tātparya.

<sup>†</sup> The other organs are named after what is apprehended by them ; the Cutaneous Organ apprehends the *touch* of things ; hence the name 'Cutaneous Organ ' applies to it, not directly in the sense in which the names of the other organs apply, but only indirectly, in the sense that the skin is the locus of that organ. \*Proceeding from material substances—adds the Sūţra. The meaning of this is that it is because the organs proceed from diverse sources (in the shape of the material substances) that they are restricted to particular objects; this would not be possible if they all proceeded from a single source [in the shape of the 'self-consciousness' of the Sānkhyas]; and it is only when each of them is restricted to a particular object that it can be defined as the apprehender of its object.

## VARTIKA.

### [P. 72, L. 14 to P..74, L. 4].

This Sattra also is be interpreted in such a way as to show how the Sense-organs are to differentiated from homogeneous and heterogeneous things; as such is the sense of all Sutras that are put forward as definitions.

An objection is raised :---

"The Sūţra merely mentions the Sense-organs by name; and as such having the form of simple *Enunciation*, it cannot  $\dagger$  be taken as a *Definition*. *Enunciation* has been defined (by the *Bhāṣya* p. 9 l. 10) as the mention of things by mere names; and this is exactly what the present Sūţra does; hence it cannot be accepted as a *Definition*."

This is not right; as the Sense-organs are of the nature of instruments, and hence their definition must rest upon the apprehension of their objects.<sup>1</sup> That is to say, being

+ There is a '¬' wanting in the text. The meaning intended must be as translated above.

<sup>‡</sup> The sense organs being imperceptible, they can only be inferred from the perception of things, which perception is not possible without the instrumentality of a sense-organ; and hence a sense-organ can be defined only as the instrument by which its particular object is apprehended and its perception brought about. Thus the the word '*Ghrāņa*' (Olfactory) in the Sūţra is to be taken in its literal sense—*jighrați anēna*, that by the instrumentality of which odour is apprehended; and this is a perfect definition of the Olf.ctory Organ. Similarly with the other Sense-argans.

<sup>•</sup> As a matter of fact, odour, which is the specific quality of Earth, is apprehended by the Olfactory Organ only; taste, the specific quality of Water, is apprehended only by the Gestatory Organ : and so forth. This is so because the Olfactory Organ proceeds from—is built of—Earth, and the Gestatory Organ of Water. If both proceeded from a single source, as held by the Sānkhya, then we could not account for the aforesaid facts.

of the nature of instruments, and as such being themselves beyond the senses (and hence imperceptible), they can be described and defined only through the apprehension of their objects; so that the Sense-organs should be defined as the instruments of the apprehension of their respective objects; as it is this apprehending that forms their distinctive feature [and what the definition does is to point out the distinctive feature of the thing defined].

The word '*bhūįēbhyaķ*', 'proceeding from material substances', has been added with a view to show that the Sense-organs have, each of them, the Earth, Water &c., for their respective causes; and this is mentioned in order to show that they are restricted in their scope.

"What is the meaning of this restriction ?"

What is meant is that each Sense-organ is the instrument by whose instrumentality the apprehension of the specific quality of a particular material substance is brought about; as a matter of fact, no Sense-organ apprehends the qualities of all material substances; in fact every Sense-organ proceeds from a particular material substance, and apprehends the distinctive<sup>\*</sup> quality of that substance alone;-i. e. that quality which distinguishes that substance from all other substances. This is the restriction that is meant to be expressed by the word 'bhūtēbhyah'. No such restriction would be possible if all the Sense-organs proceeded from a single cause; that is to say, if all the Sense-organs proceeded from a single cause, then, inasmuch as every effect follows the trend of its cause, all the organs would be of a uniform nature; so that, there could be no restriction or sharp line of demarcation in the scope of the organ; in fact either all the organs

<sup>•</sup> As a matter of fact what the Olfactory Organ apprehends is only odour, which is the distinctive specific quality of Earth. From this fact we infer, as follows, the fact of that Organ being of the Earth—' The Olfactory Organ 15 of the Earth, because from among the specific qualities of material substances, it apprehends odour only, which is the specific quality of the Earth.'

would apprehend all objects, or a single organ would apprehend all objects.

"But, in the case of colour and such other things, we find that, even though proceeding from a single cause, the effects differ in their nature. That is to say, in the case of the various shades of colour, produced in the jar, by the baking, there are distinct differences, even though they all proceed from a single cause. 'What is the one cause of these shade of colour etc?' That single cause is the contact of fire."

This is not right, we reply; as it shows that our posi-We do not hold that the tion has not been understood. various shades of colour proceed from a single fire-contact. What we hold is that they proceed from the fire-contact as aided by a certain peculiarity in the preceding shade of That is to say, when a certain object is baked on colour. fire, what happens is that each succeeding shade of colour is brought about by the fire-contact as helped by a peculiarity in the preceding shade of colour. • It is only thus that it is possible for varying grades of baking to appear in the same atom. From all this it follows that the several shades of colour &c., do not proceed from one cause. In fact we have never found any effect produced by a single cause; every effect is produced by three causes,-the 'constituent' cause. the 'non-constituent' cause and the 'efficient' cause. "But we find a single action (of moving f. i.) to be the cause of two such things as conjunction (with one point in space) and disjunction (from another point)." This reasoning is not sound; as the fact put forward is not admitted by us; you

<sup>•</sup> This 'peculiarity' of the preceding colour consists in its destruction. The succeeding colour is produced only when the preceding colour is destroyed; and until it is destroyed, no new colour is produced, even though the fire-contact continues there. This shows that the several shades of colour do not proceed from a single cause, in the shape of the fire-contact; in fact each colour has a distinct cause consisting of the fire-contact as qualified by the destruction of the particular colour that precedes it.

mean to say that a single action is the cause of both conjunction and disjunction ; but we do not accept this as true; we do not admit that any action, independently by itself, " If is the cause of both conjunction and disjunction. then, it is only as aided by something else that action produces conjunction and disjunction, then the definition of 'action' falls to the ground: Action has been defined as that which, independently by itself, is the cause of conjunction and disjunction ; and this definition fails; and the failure of the definition of Action leads to the failure (and rejection) of Action itself; \* and this means that conjunction and disjunction are not preceded (and caused) by Action." This argument does not vitiate our position; when we say that 'action, independently by itself, is the cause of conjunction and disjunction,' we do not mean that it does not stand in need of the aid of anything else; all that is meant by its being 'independent' is that it does not stand in need of any such other positive cause as appears and functions subsequently (to the action) [as a matter of fact, in the bringing about of a new conjunction, it does stand in need of the absence or cessation of the previous conjunction ; so that while independent of positive causes, it is not independent of a negative cause]. That is to say, in the case of Substances we find that one substance produces another only when aided by the subsequently appearing conjunction of other homogeneous substances; but such is not the case with Action, -which does not require the aid of a subsequently appearing Action; but being an Action, it brings about conjunction and disjunction [through the aid of other negative circumstances, such as the cessation of the previous conjunction and so forth]. Thus the definition of Action does not fail : nor are conjunction and disjunction brought about by a single cause.

<sup>• &#</sup>x27;The failure of the definition implies the failure of the thing defined '--- Tatparya.

#### The Material Substances.

#### Buaşya.

[P. 26, L. 10 to L. 12.]

What are the causes from which the Sense-organs proceed ?

\* The Material Substances are Earth, Water, Fire, Air, and Akāsha (Sūțra 13.)

Here we find the Material Substances mentioned by their respective names with the view that when they are thus clearly mentioned, it will be easy to point out which Sense-organ is the product of which substance.

[The Vārțika does not deal with this Sūțra separately.]

# Artha-Things or Objects (the fourth Pramēya). BBIŞYA.

[Page 26, L. 13 to P. 27, L. 2.]

Of the endless objects, the following are those 'objects' [which, when pondered upon as things apprehended by the sense-organs, lead to that dispassion which helps the attainment of Release; and which, when not rightly discerned, become the cause of endless births and rebirths]-----

### *Sū*[ra (14)

† Odour, Taste, Colour, Touch and Sound, which are the qualities of Earth [Water, Fire, Air and Akāsha], are the Objects of the aforesaid [sense-organs].

The qualities mentioned, belonging to Earth and the other elementary substances, are the 'objects' of the sense-organs respectively; in accordance with the actual functioning or operating of the sense-organs.

• The Vartika and the Tapparys do not take any note of this Sūţra; but the Nydyasäckinibandha has this as an independent Sūţra. The Bhāyya also speaks of this as containing the upadēshe of the bhātas; and this word could have been used only with reference to the word of the Sāţrakāra.

+The translation here follows the interpretation of the *Bhaqya*. The Varfika and the *Tatparya* however do not agree with the view that Odour and the other four qualities alone are 'perceptible'. Hence they interpret the Safra and the *Bhaqya* differently. The first difference lies in the following explanation suggested by the *Tatparya*—'*Tudarthah*', the last word in the Safra, means that which is sought

# VIRTIKA ON SUTRA 14.

[P. 74, 1.7 to P. 82, 1. 2.]

The compound word ' prithinyādiguņāh' (in the Sūţra) is capable of several explanations. "How?" Well, in the first place, it can be taken as a Genitive-Tatpurusa compound; the meaning in this case being ' the qualities of Earth &c.'; secondly it can be taken as a Doandon compound; the meaning being ' Earth &c. and Qualities';—lastly it can be taken as a Bahuvrihi compound; the meaning being ' those things of which the Earth and the rest are Qualities'. Thus the compound being capable of being explained in several ways, there naturally arises a doubt as to what is the real meaning of the word.

And [our opinion is that] the real explanation is to take the word as a *Dvandva* compound. (A) The word cannot rightly be taken as a *Genitive-Tatpurusa* compound; as, if that were the meaning, then, the Earth and the rest would cease to be 'objects of Sense-perception'. That is to say, if you explain the word as meaning 'the qualities of

after—i.e. acted upon,—by the sense-organs ; so that this word embodies the definition of the fourth ' object of cognition ', 'artha' ; and the rest of the Sātra is not a definition ; it only supplies certain details of information ; though not in a precise manner, as it is meant for a friendly listener, and not for a critical opponent.

The reason why the Tatparya had recourse to this explanation of the definition of Artha lay in the fact that according to the view of the Vartika, the Satra could not be taken as supplying an accurate enumeration of the 'objects' of perception; so the precise definition had to be found somewhere in the Satra; and this was found in the word 'tadarthab.'

The word 'prithivyddigunith' is taken, as we shall see, by the Vartika to mean prithivyddayah—i.e. 'prithivi', 'jala' and 'agni'—and gundh ; gandha, &c., being included in 'gunith'; their separate mention is regarded as another information supplied in a friendly spirit, with a view to indicate what is precisely apprehended by each senseorgan.

The great weakness in this explanation of the Sūţra is that *Prithivyādi* has to be taken as standing for only three out of five bhūţas ;while the gunas of the other two are as perceptible as those of the other three. It is not easy to see why the *Vārtika* and the *Tātparya* fought shy of the *Bhātya's* explanation ; the only reason appears to be that this explanation precludes the 'porceptibility ' of the other qualities of 'Prithivyādi'—viz : number, separateness &c.

Earth and the rest', then [the Qualities would be the principal factor of the compound, and] the Earth and the rest would be merely subordinate qualifications of the afore-mentioned Qualities, Odour, Taste &c.; and [being thus subordinated, the Earth &c. could have no syntactical connection with the predicate of the sentence; so that ] Earth, Water &c. could not be regarded as 'objects of Sense-perception. And further, the qualification itself would be entirely superfluous; the first word itself of the Sūtra mentions by name Odour, Taste. Colour. Touch and Sound ; and it is at once understood that these are 'the qualities of Earth &c.'; so that the further mention of these, ' Earth and the rest ' (in the next word of the Sūtra) becomes entirely superfluous. As a matter of fact. among Odour. Taste &c. there is no such division as that some of them are the ' qualities of Earth &c. ' and some are the qualities of other entirely different things; and only in case there were such a division, would the specification of qualities 'of Earth and the rest 'have served some useful purpose. For these reasons we conclude that the word can not be taken as a Genitive-Tatpurusa. (B) Nor again will it be right to take the word as a Bahuvrihi compound : for this reason that we do not know of any such things ' of which Earth and the rest are qualities'; when taken as a Bahuvrihi compound, the word can only mean ' those things of which the Earth and the rest are qualities '; now what are those things of which the Earth and the rest really are qualities? In fact, it is impossible to prove that Earth and the rest are qualities at all. And the Bahuvrihi compound cannot be explained in any other way (to provide another meaning). Then again, except in certain specified cases, the Bahuvrihi compound must denote something which. is co-extensive with the denotation of the component words.\*

<sup>•</sup> And further, the thought that 'Earth and the rest are qualities of something' is not conducive to that disgust for things which is the purpose of the Shāsţra.-Tāțparya.

For instance, in the case of the compound ' chitraguh', ' the man who possesses cows of variegated colour ', we find that the compound (as denoting the man possessing the qualification mentioned) is possible only when it is already known that the man possesses cows, and also that the cows are of variegated colour; in the case in question, how-Vār. : P. 75. ever, we do not know of any thing possessing the qualities mentioned ; nor do we know that the Earth &c. are " Because they appear (in the compound) as Qualities. qualification, Earth and the rest could certainly be regarded as Qualities." Certainly not; for by this assumption everything would be Quality only : as there is nothing which cannot be the qualification or the qualified of something else; so that, by your reasoning every thing would be a Quality ! For these reasons the word cannot be taken as a Bahuvrihi Thus both of these compounds being compound. precluded, the word must be taken as a Drandva compound, That is to say, we have shown the impossibility of the word being taken as either a Tatpurusa or a Bahuvrihi compound; no fourth compound is possible ; and the only compound left is the third one. Doandoa; hence we conclude that the word " prithviyādigunāh' must taken as a Dvandva compound.

The Opponent raises an objection :---

"It is not right to take the word as a *Doandoa* compound; as there is neither any authority (*Shāstra*), nor any reason, in support of this view. If the word is to be taken as a *Doandoa* compound, it is necessary for you to point out your authority'and reasons in support of the view that Earth and the rest are 'objects of sense-perception'."

Your objection is not effective, we reply. As both are available: we have both authority and reasons in support of the view that Earth and the rest are 'objects of Senseperception': As for 'authority', we have the Sūţra—'Because of the apprehension of a single thing by means of the organs of vision and touch '(3-1-1).<sup>4</sup> And this same  $S\bar{u}_i$  also shows the 'reason' as follows: As a matter of fact, we recognise the organs of both vision and touch as apprehending the same thing; as we have such a notion 'as 'I am touching the thing that I had seen'; and this fact supplies the 'reason' as regards sight and touch (bearing upon Earth); and the Sūțra quoted (which mentions this fact) supplies the 'authority'; and requisite 'authority' is also afforded by the fact that our (Nyāya) Shāstra declares that 'community' is perceptible by the senses [and 'community' belongs to Earth &c, also, and not only to Odour and the other qualities).

Thus it is proved that the word '*prithivyādiguņāh*' should be taken as a <u>Dvandva</u> compound, signifying 'Earth &c. and Qualities.'

When the Sutra speaks of *prithivyādi*, 'Earth and the rest', what are meant are Earth, Water and Fire, which are perceptible by the *external* organs of perception; and by the word 'gunāh †' are meant (1) all that inheres in substances*viz*. Number, Dimension, Separateness, Cognition, Disjunction, Priority, Posteriority, Viscidity, Velocity, Motion, Community and Distinctive Individuality ‡,—as also (2) Ṣamavāya, Inherence, which does not inhere in substances; and is yet

• The Süţra quoted represents both 'authority,' and 'reason'. It is only a material substance, an earthy substance for instance, that can be both seen and touched; so that the Sūţra indicates the fact that material substances,—i. e. Earth, Water &c.—areīamenable to perception by sight and touch: and it is not that it is only the qualities of the earthy substance that are perceived; as any single quality —out of the five mentioned in the Sūţra, Odour, Taste &c.—is never perceived by sight and touch both.

<sup>†</sup> The word 'gups:' here does not stand for only the qualities proper ; it stands for the much wider conception of property, everything that qualifies a thing. So that Inherence also, which does not inhere in Substance, becomes included ; and Motion, Community and Distinctive Individuality, though not qualities, are included as these also inhere in substances.

? The word 'vishes a' here is not used in the technical sense of ultimate differentiam; as this latter is beyond the reach of the senses. It is used in the ordinary sense of distinctive individuality '-- Taiparya. "guna', inasmuch as it (along with Motion, Community and Distinctive Individuality) is a *dharma*, property of things.

An objection is raised—. ('As according to what you say, Odour, Taste, Colour, Touch and Soundare all included under 'Gunas', they should not be mentioned separately; and the Sūțra should be in the form 'prithioyādigunāstadarthāh' thus the Sūtra would be much shorter; and yet the same end would be served."

It will not be right to shorten the Süţra in the way suggested. As the specific mention of the qualities of Odour Taste, Colour, Touch and Sound is for the purpose of showing the specific restricted action of the sense-organs: What is meant is that, as regards the qualities of Odour, Taste, Colour, Touch and Sound, the action of each Sense-organ is specifically restricted [Odour being apprehended by the Olfactory

Vār. P. 76. Organ only, and so forth]; while as regards other things, the action of the Sense-organs is not so restricted; for instance, Earth, Water and Fire are each apprehended by two sense-organs; as also the Gunas (from Number down to Distinctive Individuality in those enumerated above); Saitā (Being) and the genus gunajoa are apprehended by all the sense-organs; so also are Inherence and Negation.

The Opponent [the Bauddha, who does not admit of a Substance as distinct from an aggregate of qualities], object ing to the statement that 'a single thing is apprehended by the organs of vision and touch '[Sūtra 3-1-1, put forward by the Logician above as the 'authority' for regarding Earth &c. as objects of Sense-perception], says :—" What is apprehended by the organ of Touch is only Touch, and what is apprehended by the organ of vision is only Colour [and no substance possessing the qualities of Touch or Colour]." Now to this Opponent we put the question—How do you know that Colour and Touch are apprehended by the Organs

"We know this". of Vision and Touch respectively? the Opponent will say. "for the simple reason that we actu ally find that the cognition brought about by means of the organ of vision is qualified by Colour, (i. e. in the form of cognition of Colour) and that brought about by the organ of Touch is qualified by Touch (i. e. in the form of cognition of touch). In that case, we reply, your denial of the Substance (as the ubstratum of qualities) becomes baseless : as in regard to the jar and such other substance also, we have such cognitions as are qualified by that substance ; that is, as a matter of fact, whenever a man perceives the jar by means of his Visual and Cutaneous Organs, the object that he cognises is the jar; and his cognition is qualified by the jar, is of the jar [just as the cognition of colour is qualified by colour]. Thus your denial (of the Substance) is not well-considered.

"The cognition of the jar proceeds only from the qualities appearing in that shape; when you say that by means of the Visual and Cutaneous organs the man cognises the jar, you say what is not true; because as a matter of fact what is cognised is only the qualities, Colour and the rest, which happen to be in a particular shape; and it is these qualities that the man actually perceives in that shape; and it is by reason of this that he has the cognition 'of the jar'; and there is no such substance as the 'jar', as distinct from Colour and the other qualities." •

This is not right, we reply; as, in the first place, you apparently do not understand the meaning of the word 'akara', 'shape' [when you assert that 'Colour and the other qualities appear in the shape of the jar']. What is meant by a thing having a certain shape is that it ressembles something different from itself [so that the said assertion

249

<sup>•</sup> The Bauddha view is thus explained in the *Tatparya* :-- 'The atoms of colour and the other qualities appear in diverse shapes ; and when these qualities are found to be characterised by the action of water-fetching, they are called 'jar'; while when they are found characterised only by the action of imparting colour to what had no colour, they are called 'Colour'; and so on.

presupposes two distinct entities, the jar and the quality]; for instance, when we speak of the man having the shape of the pillar. we mean that the man has the shape of a thing, the pillar, which is not man; so that what the word ' shape' means in this connection is the ressemblance of the pillar to the man; and this 'ressemblance' is possible only when the man and the pillar are both well-known (distinct) entities. For you, however (who do not admit of the jar as a distinct entity), there is no basis for the conception of the shape of the jar belonging to Colour and the other qualities,-the conception that finds expression in your assertion that 'Colour and the other qualities appear in the shape of the jar and such other substances.' Thus then, the assertion that 'Colour &c. appear in the shape of the jar', coming from you. cannot be taken seriously. Secondly, as a matter of fact. there can be no such cognition as the 'cognition of the jar' if all that existed were only the qualities of Colour and the rest. For one who admits of nothing except the qualities of Colour and the rest, all things are equal [all being, for him a mere aggregate of qualities]; and hence for him there would be no possibility of any such cognitions as of the 'cow,' the 'horse ' and the ' jar '- cognitions that are constantly found to appear in course of our experience; \* as for him there is not available any such peculiarity in the qualities of Colour &c. (appearing in different substances) as would distinguish one cognition from another. "The difference in the cognitions is due to the difference in the configuration (or an arrangement, of the atoms of Colour and other qualities);

Vār: P. 77. that is to say, Colour and the other qualities appear in different substances in different configurations; and the difference in these configurations forms the basis of the difference in the cognitions of the several

<sup>•</sup>The reading of this sentence is defective; the meaning, which is clear, requires some such reading as unter un 3501 विविका नीरको पट पति का न आग्रु बन्दि

substances." This explanation is not tenable; for if the 'configuration' is something different from Colour and the other qualities, then there is a mere difference of names; and [if the 'configuration' is nothing different from Colour &c., then] the explanation offered becomes entirely futile. That is to say, if the 'configuration' is something different from Colour &c., then there is mere difference of names [what we call a 'substance' different from, and containing the qualities. you call 'Configuration']; if on the other hand, the 'Configuration' is not different from Colour &c., then your explanation. that ' the distinct cognitions of the jar &c. appear in accordance with the difference in the configuration of the qualities', becomes entirely futile [as in this case the 'configuration of the qualities' has no meaning] \*

"The cognitions of the jar and such other substances are wrong cognitions. That is to say, we hold that the cognitions that people have of substances, such as the jar, are not right cognitions; they are wrong cognitions, brought about by the force of a beginningless tendency towards (material) fancy." †

This is not right; as all wrong cognitions have the ressemblance of right cognitions; whenever a wrong cognition appears in the world, it always bears the semblance of right cognition [so that when there is a wrong cognition of the jar, it implies the presence of a right cognition of the jar also]; but for you (who do not admit the existence of any such thing as the jar) there can be no basis for any cognitions of the jar and such other substances; all of which cognitions

<sup>•</sup>The Parishuddihi adds a few more objections: If the configuration is the same as Colour &c. then ' the configuration of Colour ' would mean only the ' atoms of colour ' and so on ; and under the circumstances, how could you account for the perception of certain aggregates by means of two or more sense-organs ?

<sup>. †</sup> The word 'shabda' here stands for vikalpa,-says the Tätparya.

That the cognitions are wrong has to be admitted, as no satisfactory explanation is possible as to whether the substance jar for instance, is one or more than one—Teiparyo.

are regarded by you as wrong [so that there is no right cognition to which these wrong cognitions bear the semblance]; and these wrong cognitions can never appear without some such basis. From all this the conclusion follows that the cognitions in question are not wrong. Further, that the cognitions (of the jar and such other substances) are wrong can be proved only after it has been proved that the jar and such other substances are not something distinct from the qualities of Colour &c. And there is no proof in support of this latter view.

"It is not true that there is no proof in support of the view [that the jar is not something distinct from its qualities]. What proves the said view is the fact that there is no cognition of that (jar) while that (the quality) is not As a matter of fact, it is only when one cognised. thing is not-different from another that the cognition of the former is found to be impossible while the latter is not cognised; as we find in the case of Soup, and in that of a Row. (The Soup is not cognised until its constituent elements of ment and water have been cognised; and similarly the Row is not cognised until the objects constituting the row have been cognised; so that the Soup is nothing different from the meat and water, and the Row is nothing different from the objects constituting it]; and on the other hand, we have found that when one thing is different from another. one is cognised while the other is not cognised; for instance Time \* is cognised while Colour &c. are not cognised."

The above reasoning is not right. (A) Firstly, because the premiss upon which the reasoning is based is not quite true. According to yout the object *jar* is made up of Earth,

+ The Opponent's theory is thus explained in the *Tāţparya* :—The entire world consists of three *dhāţus*—the *Rāpadhāţu*, the *Arāpadhāţu* aud the *Kāmadhāţu*. In connection with the last of these, every atom consists of eight constituents —Colour

<sup>•</sup>The text reads **uu**; But the Bauddha will not admit the independent existence of **uu** or Hair apart from its Colour &c. It has therefore been presumed that **uu** is a misreading for **uu**.

(Water, Air, and Fire, Colour, Taste, Touch, Odour and Sound): so that when we perceive the jar, we should see Water &c. also (and not only the Earth); as a matter of fact, however. Water and the rest, being distinct substances, are not perceived; so that your premiss ['whenever it is found that while one thing is perceived, the other is not perceived, he things should be regarded as different'] cannot be true [as, we have the perception of Earth while Water is not perceived; and yet, according to you, Earth and Water are not This difficulty may be sought distinct substances]. to be avoided by saying that the constitution of the Atom described in the Bauddha scriptures refers to the ordinary things of the world, and not to the four Elementary Substances [Earth, Water, Air and Fire]. But even so the view that Colour and the rest are identical with the Earth &c. will go against the assertion of the Bauddha that '[every atom consists of Colour and the four Elementary substances ' [where Colour is mentioned as something distinct from Earth You might argue that you do not Water, Air and Fire.] regard Earth &c. to be anything different from Colour and But, in that case your expression ' Colour other qualities. and the four Elementary Substances' becomes equivalent to ' colour and colour'; and this expression (meaning that the Atom consists of colour &c. only) would be a direct contradiction of your scriptures, which declare that ' in the Kāma. dhāțu section of the Universe, the Atom is constituted by eight things.' If you add the explanation that the name ' Colour &c.' is applied to the aggregate of the Earth Vār : P. 78.

Var: P. 78. gc. [and the notion of 'eight' declared in the scriptures is purely fictitious or imaginary ; so that your view

The *Tâțparya* remarks that the view that Earth, Water, &c. are not distinct substances is a direct contradiction of the theory that 'every atom is made up of *eight* thinge.'

Taste, Odour, Touch, Sound, Earth, Water, Fire and Air. Thus every atom represents an aggregate of all these eight ; so that neither of these eight has any distinct existence apart from the rest.

involves no contradiction];—then our reply will be that even with this explanation it will not follow that Earth &c. are only Colour. "How so?" Because your theory would mean that Colour is a composite of Earth &c., and Earth &c. are the composite of Colour &c.; so that both sets being composites, there are no components (in your philosophy); and as a matter of fact, in the absence of components there can be no composites; as every composite is found to be dependent upon its components.\* Thus there is no escape for you from 'self-contradiction.'

(B) + Secondly, the reasoning that you have put forward - Earth &c. are not different from Colour &c., because there is no cognition of that while that is not-cognised '-----is open to another objection :---If we follow the real signification of the word 'that', in your statement, we find that it becomes absolutely incoherent. That is to say, when we take into consideration the meaning of the word 'tat' (that occurs in your assertion), the meaning of your statement comes to be that ' there is no cognition of that when there is cognition of that same'; and this is certainly most incoherent. Then again, [the meaning that you intend to express by your statement is that 'the Earth is not different from Colour &c., because there is no cognition of Earth when Colour &c. are not cognised '; but this also is open to the following objection : ] In your sentence-' the Earth is not different from Colour &c. '-if you intend ' colour &c.' to be the qualifi cation of, and subordinate to, the 'Earth', then [as the pronoun ' tat,' that,' always refers to the principal factor] in the sentence, 'because there is no cognition of that when

+ Having urged 'Self-contradiction' against the Opponent's reasoning, the Author next proceeds to show that the words in which the reasoning has been set forth make it absolutely incoherent and assurd.

<sup>•</sup> Even the bringing in of the 'samvrifi' or 'Fiction' will not help you ; as the function of fiction lies in the hiding of the real forms of other things ; and as in the case in question there are no components or composites, there is nothing that could be *kidden*, — *Tatparya* and *Parishuddhi*.

that is not cognised, 'the word 'that' in both places would refer to the Earth (which, ex hypothesi, is the principal factor, having Colour &c. subordinate to it); so that the meaning of your reason would come to be-'because there is no cognition of the Earth when the Earth is not cognised '; the reason for this lying in the fact that the word ' that ' cannot refer to "Colour &c.,' which are the qualifications of, and subordi-This same argument will also apply to nate to, 'Earth'. your view if you regard the 'Earth 'as the qualification of, and subordinate to, ' Colour &c. ;' as in this case also the meaning of your reason would be - ' because there is no cog. nition of Colour &c. when Colour &c. are not cognised ': as the word ' that ' in both places would refer to the principal factor (which, in this case, would be Colour &c.). Similarly if you put forward your conclusion in the form - ' The Earth is only Colour &c.,'or 'Colour &c. only are the Earth ',-as this would mean that Earth is only Colour &c. or that Colour &c. alone are the Earth, your reasoning would be open to the same objections as before [i.e.as ex hypothesi, the Earth would be identical with Colour &c. the meaning of your reason would be 'because there is no cognition of the Earth when the Earth is not cognised ', or because there is no cognition of Colour &c. when Colour &c. are not cognised'].

(C) Thirdly, your reasoning is open to the further objection that in whatever form you put forward your conclusion (asserting the non-difference of Earth, 'prithivi', from Colour &c., ' $r\bar{u}p\bar{u}dayah$ '), it always involves the incongruity that there can be no compatibility or co-ordination between the two words (subject and predicate) of your conclusion, because of the difference in their number; the word 'prithivi' is singular and ' $r\bar{u}p\bar{a}dayah$ ' is plural; and difference in number always implies difference in the things denoted; as we find in the case of the two words 'naksatrant', 'stars', and 'shashi', 'moon'; so that, inasmuch as we have the two

words 'prithivi,' ' Earth', and 'rupādayah', ' Colour and the rest,' having different numbers, there must be some difference between the things denoted [i.e. between the Earth " But we often find words denotand Colour &c.]. ing the same thing taking different numbers ; as for instance, when we speak of the 'four life-stages', ' chatvārah āshramāh,' (plural) as ' chāţurāshramyam' (singular)." This is not right ; as we do not admit of different numbers being used in connection with words denoting the same thing; as regards the word 'chāturāshramyam' cited by you, what is denoted by this word is the fact that all the four life-stages are conducive to the performance of certain common duties (such as truthfulness and the like) [and as this fact is one only. it is only right that the word should take the singular number ; and then again, the word, thus explained, does not denote the same thing as the word 'āshramāh'|. Other instances of the use of different numbers used in connection with words denoting the same thing that may be cited are-(a) the 'sad gungh' (plural), constitute the sadgunyam' (singular); and (b) the 'vishēṣāh' (plural) constitute the 'vaishēşikam' (singular) ;-but both of these are amenable to the same explanation as above [the singular form in (a) 'sadgunyam' denotes, not the six gunas or methods of success, but the fact of the six methods serving the common purpose of accomplishing success for the king; and the singular form in 'vaishesikam' denotes, not the many vishesas, or specific individualities, but the fact of these individualities serving the common purpose of differentiating a thing from all other things .

(D) Fourthly, your reason—' because there is no cognition of the Earth when Colour &c. are not cognised,'—is not a true one. "In what way is it not true?" Well, as a matter of fact, we do cognise a substance, even when its Colour &c. are not cognised; for instance, when a piece of rock-crystal is placed near a black object, we do-not perceive the colour of the crystal, which is *white*; and yet we do perceive the crystal itself [so that it is not true that there is no cognition of a thing when its Colour &c. are not cognised].

(E) Fifthly, in support of your reasoning you have cited the instances of the Soup and the Row; and this is not right; for apparently you do not understand what the 'soup' or the 'row' is. When a number of different substances (flesh, water &c.) are cooked together, they become mixed up with certain other substances brought into existence during the process of cooking; and at a certain time during this process there is a mixture of all the various ingredients : and to this mixture is given the name of 'Soup'; so that the Soup is not the same as its ingredients; it is some; thing different from them; hence the case of Soup is not a right one to be cited as an instance where, on account of the non-difference of two things, the perception of one implies the perception of the other. This explanation disposes of the case of all such things as ' pāka', ' kānchika ' &o." [which are the names of dishes made up of several ingredients]. Similarly, when a number of like and unlike things stand together towards one direction, in such a way that they are in contact with one another,-their limit or end being either definitely ascertained or not so ascertained. -we have a notion of *plurality* with regard to these things so placed; and it is this plurality of number to which the name 'Row' is given [and being a 'number', it is distinct from the things to which the number belongs]. So also when a number of elephants, horses, and chariots stand together. in different directions, in contact with one another,---their

• 'Pāka ' is a name given to such preparations, chiefly medicinal, as consist of many substances cooked together ; e. g. *Dhāfrīpāka*. 'Kāāchika' is a medicinaj preparation where many medicinal substances are cooked along with very old gruel. We have not been able to ascertain what the 'vivēka' or 'virēka' is ; but from what is said on p. 81, 1. 8, it seems that this is a name for a preparation consisting of the mixture of equal quantities of Earth, Fire and Water—' Avakşāra' is the name given to the mixture of the ash of several substances.

exact extent being, or not being, exactly determined,-the

plurality of *number* subsisting in these is called 'army' Similarly when a number of a particular class of persons congregate together in definite bands, according to the diverse degrees of renunciation, the plurality of number subsisting in them comes to be called 'sect' or 'congregation.' Similarly with all collective names; such as 'heap', 'forest', 'herd,' 'Brahmāṇa-band' and the like. The name 'Circle' is given to that plurality of number which subsists in a number of things placed in diverse directions, in such a way that the central space enclosed by them is vacant. Thus we find that the case of 'Row' (or any similar collective name) does not afford the required instance of ' non-difference'.

This proof, we reply, we have in the fact that when we perceive an object, we speak of this perception in terms of all that are perceived along with it; for instance, when the sandal is perceived, we speak of this perception as 'the colour of this is white ', ' its taste is bitter ', its odour is strong', 'its touch is cool'; and as a matter of fact, we know that whenever we speak of the perception of one thing in terms of the perception of another thing, the two things are different; as for instance, when we speak of the vessel as ' of the Brāhmana;' and we never speak of the perception of the sandal in such terms as ' this white colour that I perceive belongs to the qualities of Taste, Odour and Touch, which (though not perceived) are inferred.' [And such should be the expression if the Sandal were nothing apart from its qualities]. "Your reasoning is not valid; as it is based on a premiss, the truth of which is vitiated by the case of such things as 'army', 'forest' and the like; in the case of these things we make use of such expressions as 'the elephant of the army', 'the tree of the forest', where the things are not different [e.g. the Elephant is not something different from the Army, nor is the Tree different from the Forsst; so that mere verbal expression, such as 'the odour of the Sandal', cannot justify the conclusion that the Sandal is something different from odour and other qualities]." This is not true, we reply; it is not true that the *army* and the *forest* are identical with the *elephant* and the *tree* respectively; we have already explained • how the *army* and the *forest* are entirely different from the elephants and the trees composing them respectively.

[The Opponent takes up the case of the *Row*, which the Logician has analysed into a phase of Number, and hence different from the things composing the *Row*.]——" There Var. P. 80. is no such thing as Number; how then can we accept the view that (in the form of the *Row*) it is something different from the things to which it belongs ?"

This is not right; as one who denies the existence of Number cannot account for either the affirmation of oneness (of Number, and that to which the number belongs, or of qualities and the substance to which the qualities belong). or the denial of diversity (between them) [as both oneness and diversity are only numbers]; and yet the said notions of oneness and diversity cannot be altogether denied (by the Bauddha Opponent, who actually makes the said affirmation and denial); and when you cannot deny the existence of the said notions, inasmuch as these are qualified notions, they would not be possible, if their very basis, in the shape of the Number, were altogether denied. "Why so?" Because of the following reasonings :-- (a) ' The notion of one or many (with regard to the jar) must have a basis different from the basis of the notion of the jar itself,-because it is a notion different in character from the notion of the jar,-

On this same page; as also under Sutras 2, 1. 33 to 36, where it is proved that the composite is different from its components.

like the notion of blue; --- and thus that which forms the basis of the notion of one or many is Number.'--(b) Then again, the qualified notion of number being different from the notion of that to which the number belongs,-differing, from it, as it does, in regard to its object, its cause and the notion itself, -it must require for its appearance. an entirely different basis; as a matter of fact, we find that whenever one notion differs from another, in regard to its object, its cause and the notion itself, it always requires a different basis: as for instance, in regard to such things as the cloth, the skin and the blanket, we have those same notions only of which the cloth the skin and the blanket respectively, in their unqualified form, are the basis; while in connection with those same things, the notion that we have of the colour blue is found to proceed from a basis entirely different from those things (the cloth &c.); in the same manner in connection with the jar, \* the notions of 'one', 'two' &c. that we have are found to have their object and cause different (from those of the notion of the jar itself); and from this it follows that they must proceed from a different basis; and this basis is what is called 'Number'. [This same reasoning applies to the case of all the qualities, Colour and the rest].

[The Opponent brings forward another objection]—"We have such phrases as 'extensive army', and 'the forest in flowers',—where the army and the forest are spoken of as extensive and in flowers; so that either the army or the forest cannot be mere 'Number' (as the Siddhānți has tried to prove above, p. 79, 11. 6—7). If the army or the forest were mere number, we could not have such expressions as 'extensive army' or the 'forest in flowers'; as extensiveness cannot belong to Number, nor can Number have flowers."

• The reading should be पट गरिषिपयनिषिध्वयविदिभाष: सम पतादिमरपया: : as read by the Chaukhambha Series edition.

↑ A ▼ is wanting in the text. It is found in the Chaukhambha Series edition.

This does not affect our position, we reply. For what is the meaning of the expression 'the extensive army'? "The same elephant &c. that constitute the army, having their precise number undetermined, and having other constituents (elephants, horses &c.) added to them, come to be spoken of as 'the extensive army'; so that what is called 'extensive' is only the plurality of *number*, arising from an † increase in the constituents of the army, which are spoken of as 'extan-

Vār. P. 81. sive.' Then as regards the expression 'the forest in flowers,' it is only the plurality of number, which inheres in the same substratum as the flowers; this substratum being the blossoming trees [and this co-substrateness forms the basis of the figurative application of the epi: thet 'in flowers' to the Number]; just as we have in such expressions as 'the bitter sugar'; though it is the taste that is 'sweet' [and the reason for the applying of the epithet 'bitter' to the sugar, and to the taste, is due to the fact that both taste and bitterness inhere in the same sugar.]

Similarly Number and other qualities must be regarded as different from the substance to which they belong, because they have different names. "The reason given is not sound, as we find many names of things that are mere nonentities; for instance, 'pit', and 'hole' [which are the names of mere void, which is a non-entity]," This argument is not right; as evidently you do not know (what a pit is). The pit is only the ākāsha as limited by a particular configuration of composite particles qualified by colour and other qualities,

• 'The word ENITY, etymologically meaning that which exists, here stands for number ; and ENITY is that to which the number belongs—*i. e.* elephants, horses and chariots. And when the army, originally consisting of elephants, has some more elephants added to it, it is said to have become *extensive*. This shows that extensiveness is nothing more than *number* in an undefined form ; and it is varying ; on account of the possibility of further additions to, and subtractions from, the army.'— *Tatparya*.

† 'guve', not 'ouver', nor 'ouve Avve' as read by the Chankhambha Series. edition, is the correct reading. The seure demands it and the Zäfparya supports it --a configuration of which the central portion is empty. The same is the case with the *hole* also. [And thus being  $\overline{A}k\overline{a}sha$ , neither the pit nor the hole can be regarded as a void or non-entity].

The Opponent raises a further objection :-- " It is not right to regard a thing as different simply because we find it having a different name; (a) because as a matter of fact, we find different names applied to one and the same thing; for instance, we have such expressions as 'the post of khadira wood' [where, though the post is not different from the wood, yet they are spoken of by different names];-(b) secondly because we find a different name applied to a number of disjointed things;-as when we speak of a 'line of houses' [where the line is nothing different from the houses ]; and also a different name applied to a number of heterogeneous things-as when we speak of the virēka consisting of the ' triune\* combination of Earth, Water and Fire ?. (all this proves that we are not justified in deducing any conclusion from mere names or expressions."

None of the above reasonings is convincing: (a) It has been urged that with regard to one and the same thing we find different names used. This is not right; as in the case outed by you what the word '*khadira*' denotes is a certain substance characterised by a particular class-character; the word ' post' also denotes a certain figure; and a ' figure ' is only that particular form of conjunction which is called '*prachaya*', 'aggregate' or 'conglomeration'; and it is certainly something different† (from the *khadira*). The same reasoning applies to all similar expressions— such as 'the coil of the serpent', 'the body of the image', 'the ring of gold',

† The Khadira wood and the post, both being material substances, could not inhere in any one part of the post.

<sup>•</sup> The text here is hopelessly corrupt. Neither the *Tatparya* nor the *Parishud*. *dki* helps us to trace the correct reading. The Chaukhambha Series edition reads • virðkah ' for ' vivðka b'; ' vyúhab ' is the word that gives some sense ; and has been adopted in the translation. It may be that ' virðka ' is the name of a certain preparation consisting of the mixture of equal quantities of Earth Fire and Water.

'the body of the grinding stone,' and so forth,— in every one of which the two words denote different things. (b) The case of the expression 'the line of houses' is analogous to that of the word 'row', which we have explained above. (c) As regards the third case, where different names are applied to a number of things as forming a 'combination,' called 'virēka'it is clear that ' combination ' is only a form of conjunction (which always implies difference among the members in conjunction).\*

[A fresh objection is raised against the view that the Substance is something different from the qualities belonging to it]-" As a matter of fact, we have no cognition of any sub stance apart from the aggregate of its qualities". Tŧ seems you have the following reasoning in your mind-"If the substance were something different from the qualities, then it would be perceived apart from these qualities ;--as a matter of fact however, it is never so perceived ;---hence the conclusion is that there is no such thing as Substance (apart from qualities)." But this reasoning is not valid : In-as much as the non-perception can be due to two causes; and your premiss [' That which is not perceived does not exist ] is not true. With regard to every case of non-perception, there is adoubt as to whether there is no perception of a thing because it does not exist, (e. g. of the hare's horns), or because the means of perception are absent (e. g. of the roots of a tree buried under the ground). If then, the meaning of your premiss be that 'there is non-perception of the substance because it does not exist', then as this premiss would include the conclusion (that 'the substance does not exist'), it would not be a right premiss [as the conclusion being by its very nature open to doubt, the premiss that includes that conclusion also becomes of doubtful validity |. If then, the meaning of your

<sup>•</sup> The reading of this sentence is corrupt and corriously enough, the reading of the corresponding passage of the *Parvapakya* is also corrupt. We are unable to guess the correct reading and neither the *Tatparya* nor the *Parishuddhi* affords in clue as to the reading. As in the *Parvapakya*, so here also, we have adopted the reading 'wiskah', though perhaps 'wykhah' may be a better reading.

premiss be that the non-perception of the substance is due to the absence of the means of its perception,-then also it cannot be accepted as leading to the desired conlousion; for it is not right to deny the difference (of the substance from the qualities) merely on the ground • that there are no means available for cognising that difference. As it is only on the strength of the absence of such means of cognising a thing as would be possible in the case, that you could rightly conclude the absence of that thing. If, lastly, you assert that you do base your conclusion on the absence of such possible means of cognising the substance as apart from qualities, then] Your reasoning also becomes open to all the objections that we have shown against the former reasoning of yours, that 'the substance is not different from qualities, because there is no cognition of it when the qualities are not cognised. (P. 77, L. 13).

Thus we find that the more we examine the arguments put forward in support of the theory of *non-difference* (of Substance from Qualities), the more do we find them supporting the

Vār. P. 82. theory of *difference*; as it is found that while all proofs tend towards one—the view of difference. —all of them tend against the other—the view of non-difference.

Thus it is established that the word of the Silfra, *prifhivyādiguņāķ* should be taken as a *Dvandva* compound.

The reading of the printed text is defective. The Japarya reads w Awiwiwiw.

## Buddhi-Apprehension. The fifth Parmeya.

#### BHAșta.

# [Page 27, L. 3 to P. 27, L. 8.]

\* Some people (the Sänkhyas) have held the view that Järna, "Cognition," is the function of Buddhi, "Intellection," which latter is a non-intelligent or unconscious instrument; while Up-labdhi, "Apprehension," is the function of the intelligent (Soul), which latter is not-active. And our Author makes the following declaration, with a view, it would seem, " to set aside this view.

### Sūļra (15).

# 'INTELLECTION', 'APPREHENSION,' AND 'COGNITION 'ARE SYNONYMOUS TERMS ‡ (SUTBA 15).

It is not possible for Cognition to belong to the unconscious instrument Buddhi; as if it were, then Buddhi could be a conscious entity; while there is a single conscious

• The Sänkhys theory is thus explained in the *Tatparya*:-Buddhi is a product of the three gupas, which are unconscious entities. Hence Buddhi also is uncouscious. Through the medium of the Sense-organs, the Buddhi becomes modified into the form of the object. The faculty of consciousness on the other hand is unmodifiable, and is even conscious. When Buddhi comes into close proximity to this conscious entity, it reflects within itself this consciousness; and thereby appears as itself conscious; and becoming modified into the form of the object, it cognises it; hence the modification of the Buddhi into the form of the thing cognised completes the 'cognition ' of that thing. While the connection of the conscious entity, through reflection, with the Buddhi in the shape of the object cognised, constitutes a function of the conscious Sou', and is called the 'apprehension' of the object by the Soul. Just as the moon though without light of own, reflects the light of the Sun, and with this reflected light illumines objects, in the same manner Buddhi, though itself unconscious, reflects the consciousness of the Soul and thereby engnises objects and makes them apprehended.

+ "It would seem "-This qualifying clause is added with a view to indicate that this refutation is not the main purpose of the Sütra. The Sütra is for the purpose of providing a definition of Buddhi; and the way in which the definition is put forward serves also the purpose of setting aside the Sätkhya view.

<sup>‡</sup> Thus the definition of Buildhi comes to be this — 'That thing which is dengted by these synonymous\_words is Buildhi.'

entity, apart from the aggregate of the body, and the senseorgans<sup>\*</sup>.

Though the sentence composing the Sūtra is for the purpose of providing the definition of one of the *objects of cognition*, yet it is taken as implying the other fact (the refutation of the Sānkhya theory) by the force of the argument (implied in the mention of the synonyms).  $\dagger$ 

VARTIKA ON SUTRA 15.

[Page 82, Liue 3 to Line 22].

The Sūțra briefly indicates something else (viz: the the refutation of the Sānkhya theory) while putting forward the definition of Buddhi, the turn of whose treatment has arrived  $\ddagger$ .

Intellection is that thing which is denoted by these synonymous words—'Intellection,' 'Apprehension,' 'Cognition.' "How can mere synonymous words constitute the definition of a thing §?" They can do so for the simple reason that they serve to differentiate the thing defined. The only purpose served by definitions is to differentiate things from one another; and as a matter of fact we find that no other thing

• This refutation is thus explained by the *Tatparya* :-Buddhi cannot reflect the conscious Scul, in the way that the moon reflects the light of the Sun. As consciousness being non-modifiable, there can be no reflection of it. Hence it would be necessary to attribute consciousness to the Buddhi itself. So that every cognition will have two conscious agents. (See Vartika below).

† Thus explained by the Parishuddhi.

**‡** The Soul and other things that have been already defined are causes of Buddhi; so that after the definition of the causes, it is the turn of the definition of the Effect—says the *Tapparya*.

§ The sense of the objection is that mere words depend upon connection only; so that any word might, by convention, be applied to anything; so that no mere word can be a proper definition. The reply is that there are two kinds of words—Some have their denotation fixed by individual convention; as when the father gives a certain name to his child; while there are others whose denotation is fixed by a convention that is universally binding; as in the case of the word 'cow' denoting the cow. And there is nothing incongruous in regarding vords of this latter class as proper differentiators of things—T diparya.

**26**6

(save Būddhi) is denoted by the synonyms mentioned; so that being peculiar to the thing defined, they serve as its definition.

The Bhasya says [Page 27, Line 8.]—The schence of the  $S^{n}$  is taken as implying the other fact (the refutation of the  $S^{n}$  is theory) by the force of the argument.

The meaning of this is that the function of Buddhi as (postulated by Sānkhya) is set aside by means of the mention of the synonymous words. These people have held that Cognition is the function of Buddhi, and Apprehension is a function of the Soul; and with a view to reject this view the Sūtra declares that all these words—Buddhi (Intellection), 'Jäūna (Cognition) and Upalubdhi '(Apprehension) are synonymous; so that Cognition being the same as Buddhi, cannot be regarded as a function of it, something different from itself.

" But what is the argument that implies all this ?"

It is this :--When one asserts that 'the Soul apprehends' and 'Intellection cognises,' he admits that both Soul and Intellection are conscious entities. And if both were conscious entities, then there would be \* no possibility of any inference of cognition having a single agent, which is deduced from the fact of every cognition belonging to only one individual. That is to say, if Intellection were a conscious entity, and the Soul also were a conscious entity, then the Soul could never apprehend things touched by the Intellection; for the simple reason that the apprehensions of one conscious entity are never cognised by another conscious entity; as a matter of fact, however we find that the Soul does apprehend things touched by Buddhi; hence the conclusion is that there is a single

<sup>•</sup> The translation follows the interpretation of the Titparya; but this makes the presence of ' $\P$ ' necessary in the text. The text as it stands may be translated this :— 'The view that both are conscious entities would be met by the following re isoning based upon the fact of every cognition belonging to only one agent.'

conscious entity [and this is the same whose consciousness is admitted by all parties]. If (for the purpose of explaining the fact of a single cognitive agent) it be assumed that [there are functions of both, Soul and Buddhi, and] the function of the Cognitive Soul is non-different from that of Buddhi [i.e., either that the function of both is one and the same, or, that though their functions are different, they cannot be distinguished ],-then it becomes incumbent upon you to point out the exact nature of the Soul (as distinguished from Buddhi),' "Well, Buddhi determines things, and the Soul apprehends them; that is to say, the Soul is conscious of things in accordance with such time and place in connection with which Buddhi determines them." But determines' and 'apprehends' are synonymous terms; and it is not proper to regard those things as different which are spoken of by means of synonymous terms : as we find in the case of the words ' dhvani' and 'nadu.' If it were not so [i.e., if things spoken of by means of synonymous words were different], then in the case of the words 'dhvani' and 'nada' also the things denoted by them would be diverse! It may be held that "while the Soul apprehends things, Buddhi makes them known or apprehended." True; in that case the Soul of man cognises things by means of Buddhi, and it is not Buddhi that cognises things; when you say that Buddhi makes known things, this Buddhi becomes only an instrument of cognition.\*

> Manas,—Mind. The Sixth Pramēya. Blīzsya.

> [Page 27, Line 9 to Page 28, Line 6.]

Remembrance, Inference, Verbal Cognition, Doubt, Intuition, Dream, Imagination, as also the Perception of Pleasure and the rest,—all these are indicative of the existence of the Mind; and in addition to all these, we have the following also—

<sup>•</sup> So that Buddhi would be the same as Manas - mys the Talparya.

### SUTBA (16) .- THE NON-APPEARANCE OF SIMULTANEOUS COGNI-

TIONS IS INDICATIVE OF THE EXISTENCE OF MIND. (2).

Inasmuch as Remembrance and the rest (enumerated above) are not brought about by the instrumentality of the (external) \* sense-organs, they must be due to some other organ. As a matter of fact, we find that even though at one and the same time several perceptible objects, odour and the rest, are in close proximity to the respectively perceptive sense-organs, the Olfactory organ and the rest, yet there is no simultaneous cognition of them ; and from this we infer that there is some other cause, by whose proximity cognition appears, and on account of whose non-proximity cognition does not appear,-this other organ being in contact with the several sense-organs, and helping them, and being non-pervasive (limited) in its dimension. If the proximity of sense-organs to their objects, by themselves, independently of the contact of the Mind, were the sole cause of cognitions, then it would be quite possible for several cognitions to appear simultaneously.

VABTIKA ON SUIRA 16.

[Page 83, Line 1, to Page 85, Line 4.]

The Bhasya (page 27, l. 9), says-Remembrance, Infer-

Varțika, Page 83.

ence, etc.; this means that Remembrance and the rest are indicative of the pres-

ence of the Mind. "Are these the only indicatives?" No. "What then?" This also that follows (in the Sūtra):—*i.e.* "The non-appearance of simultaneous cognitions." As a matter of fact, we find that at times, even though the contact of several sense-organs and their objects is present, yet the cognitions of all these objects do not appear simultaneously; and from this it follows that there is some other organ capable of being in contact with the sense-organs and helping them, and nor-pervasive in its dimension, the presence and absence

<sup>•</sup> This qualification is added by the Tatparya.

**<sup>†</sup>** From here the translation has the advantage of the Chauchambha Sanskrit series edition; but the page references continue in accordance with the *Bibliotheca Indica* edition.

of whose contact determine the appearance and non-appearance of cognitions. "How does this conclusion follow?' For the simple reason that the non-appearance of the effect (cognition) can only be due to some deficiency in the cause (the sense-contact; and this deficiency consists in the absence of mind-contact). This is the meaning of the Sn/ra.

"How can Remembrance and the rest which subsist in something else (the Soul), be indicative of the existence of the Mind?"

We do not mean that Remembrance and the rest are indicative of the Mind, because they subsist in it; \* what we mean is that they are due to so ne other instrument, because they are actions, and yet they are not the actions of odour-cognition and the rest. That is to say, in our experience we have found that an action other than Olour-cognition is due to an instrument other than the Odour-organ; and so forth; as for instance, the action of the chariot : and Remembrance and the rest are actions ; so these must be due to the operation of instruments other than those of odour-cognition and the rest. Or, the reasoning may be put as follows :-- Pleasure and the rest must be due to the operation of an organ other than the Visual and the rest, because while being different from odour (colour) and such other objects (operated upon by the Visual and other organs), they are objects of cognition, - just like chariots and such other objects (operated upon by agencies other than those of the ordinary sense-organs). As a matter of fact, we find that the chariot &c., are operated upon by such instruments as the axe and

<sup>•</sup> That is to say, Remembrance etc., are actions, and yet they are not brought about by the instrumentality of the Visual and other organs ;—therefore they must be due to the instrumentality of some other organ. Because they are the specific qualities of the Soul ; and all such qualities of the Soul must be due to the instrumentality of organs ; as we find in the case of all perceptional cognitions. So that the appearance of Remembrance must be due to the operation of an *organ*, and not to any such agency as that of Impressions and the like. And to this organ we give the name ' Mind.'

the like, which are other than the Visual and other senseorgans; and pleasure, etc., also are objects (like the chariot); hence these also must be operated upon by instruments other than the visual and other organs.

An objection is raised :---

"The non-appearance of simultaneous cognitions is a property belonging to cognitions; how then can it be indicative of the Mind? Even when a property is not related to a thing, if it were regarded as indicative of it, then everything would be indicative of everything; and we could in that case have such reasonings as—'the Soul exists because the crow is black.' Such reasonings however are impossible; so that a property that is not related to a thing can never be regarded as its indicative."

To this objection some people make the following reply:—Even though a property be not related to a thing, it can be indicative of it. For instance, when we see a fresh earthenware cup, even though this secing of the cup, does not subsist in the potter, yet it rightly indicates his existence. Similarly also the \* sight of the revolving potter's wheel [which also indicates the presence of the potter].

This explanation however is not right. What is indicated by the fact (of seeing of the fresh cup) is, not the presence of the potter, but only the spot, the point in space, as qualified by the presence of the potter; and certainly the presence of the cup also is a qualification of that same spot. Similarly when the spot is found qualified by the revolving wheel, it proves the fact of that same spot being qualified also by the presence of the potter. Thus we find that in no case is there an Inference of a thing from a character not related to it.

<sup>•</sup> Both editions read 'chakramadarshanam', which gives no sense. 'Chakradarshanam' gives better sonse.

"In that case the non-appearance of simultaneous cognitions not being related to the Mind, how can it be indicative of this latter?"

• The said non-appearance is not absolutely unrelated to the Mind, when we take the appearance of simultaneous cognitions as the Subject, or Minor Term, of our inference "How so?" The apprehensions of Colour, etc., must be regarded as standing in need of other instruments, because they are never found to appear simultaneously; for instance, in the case of a man well-versed in several handicrafts, we find that even though several instruments, in the shape of the axe and the rest, are before him at one and the same time, yet, they do not bring about, at the same time, any large number of objects, in the shape of the chariot and the like ; and this because all those instruments stand in need of the operation of his hands : in the same manner, inasmuch as the Eye and the other organs also are never found to bring about simultaneous cognitions, it is concluded that these also stand in need of the operation of some other instrument. Or again, we may meet the objection by putting forward an inference in which the sense-organs are the 'Subject' or Minor Term. "How?" In the following form :--- 'The Eye and the other organs, in all their operations, stand in need of another instrument, because they are never found to operate simultaneously; just like the axe and other instruments.

A fresh objection is raised :--- "If then, the Eye and the other organs are incapable of apprehending their several

<sup>•</sup> The only inference relevant to the present context, of which the appearance of simultaneous cognitions could be the subject, may be thus stated :-- 'The appearance of simultaneous cognitions is not possible because the perception o" colours, etc., stands in need of an instrument other than the Eye, etc.'; and then we can construe the next sentence as proving the fact of the perceptions standing in need of other instruments; the reasoning contained in this latter sentence having the apprehen ions for its 'Subject,' and not the appearance of simulta" eous cognitions.

objects simultaneously, because they stand in need of another instrument,-then, why should there be no simultaneous cognition in the case of such objects as are all perceptible by the same sense-organ? Certainly the contact of the mind is not absent in the one organ! It will perhaps be urged that the non-appearance of simultaneous cognitions in this case will be due to the diversity of the objects related (to the organ). But then, how would you account for it in a case where several objects are actually related to the organ at one and the same time? In the case of such several objects as the blue colour, and the like, where these objects come into contact with the organ one after the other, the diversity of the objects may account for the non-appearance of their simultaneons cognition. But in a case where several objects are actually in contact with the organ, how would the said non-appearance be accounted for? For example, [when you see the white cow walking, and the white colour, the animal's body and the motion are all in contact with the eye at one and the same time] why cannot we have the cognition 'the white cow is walking' [where the three cognitions of the three objects would be simultaneous ? "

To the above some people make the following reply :--The non-appearance of simultaneous cognitions is due to the diversity in the *desire for cognition* (in the mind of the cogniser). The sense of this explanation offered by some people is that, even though a certain object may be related (to the perceiving organ), yet it is not cognised, if there is no desire (on the part of the cognitive agent) to cognise it. [So that when a number of things are not cognised at one and the same time, it is due to the fact that the desire for cognising all of them is not present at one and the same time].

This explanation is not right: as this would lead to the rejection of Mind; if the non-appearance of simultaneous cognitions were due only to the diversity in the desire for the

several cognitions, then, Mind should be rejected altogether. [If, in the case of one set of cognitions, the non-appearance be held to be due to the diversity in the desire for cognitions, then] in other cases also there would be no bar prohibiting the postulating of the same diversity in the desire for cognitions ; so that there being no use for the Mind, it should be rejected.\* But there are cases where even though the desire for cognising many things is present, simultaneous cognitions do not appear; and for this some other explanation than diversity of desire for cognising should be found. Hence the non-appearance of simultaneous cognitions must be regarded as due to some other cause (than the diversity of desire for cognising). "What is that cause ?" The cause lies in the very nature of instruments. That is to say, it is in the very nature of Instruments that they never act unless they are operated upon (by an intelligent agent); and in the same manner it is also in their very nature, that even though related (to objects).

Värtika, Page 85.

they do not have more than one action at a time; that is to say, even though

it may be related to several objects, an instrument can never have more than one action at a time; and the reven though the Soul may be the supervisor or operator of the instrument, yet, inasmuch as the fact of the Soul being related to more than one organ at one and the same time cannot be denied, some other cause (than the supervision of the Soul) should be found for the non-appearance of simultaneous cognitions. And this cause is no other than the Mind. Thus is the existence of Mind established.

• As Apparent Inconsistency of the non-simultaneous cognitions is the only basis for the postulating of Mind; so that when another explanation, in the shape of diversity in the desire for cognitions, is found for the non-simultaneous cognitions, the inconsistency ceases; hence there remains no basis for the assuming of Mind.

+ 'The supervision of the Soul cannot account for the non-simultaneity of cognitions; as when several causes are present, the Soul does bring about several effects. For instance, one and the same boy accompanies his teacher, carries his water-pot, and repeats his lessons—all at one and the same time '—Titparya.

# Pravriffi, Activity—Seventh Pramēya. BHIşya.

[Page 28, Line 7 to Page 28, Line 11.] After Mind comes the turn<sup>\*</sup> of Activity; and ACTIVITY CONSISTS IN THE OPEBATING OF SPEECH, OF MIND AND OF BODY. (SUTBA 17.)

, By the word 'buddhi' in the Sūțra the Mind is meant, the word being taken in the sense of that by means of which things are cognised (buddhyafe anaya)<sup>†</sup>.

<sup>‡</sup> The various 'operatings' by the body, by Speech and by the Mind are virtuous and sinful; and are of ten kinds. And this we have already explained above under Sütra 2.

# VÄBŢIKA.

[Page 85, Line 5 to Page 85, Line 13.]

Activity consists of the operating of Speech, of Mind, and of Body—says the Sūțra—*i.e.*, of operations by Speech, by Mind and by Body.

<sup>o</sup> As Activity belongs to the Mind (see Süţra), Activity has to be defined after Mind has been described.

+ The word ' buddhi', when explained as ' buddhyafë iti,' that which is apprchended, denotes cognition; and when explained as ' buddhyat anayā', it denotes the instrument of cognition, Mind.

 $\ddagger$  Says the Tatparya:—Operations are of two kinds—some give rise to cognitions; others give rise to action. For instance, the operation of Speech becomes the cause of virtue or sin according to the nature of the cognition that it produces (in the mind of the person spoken to). So that 'Speech' must be taken here to stand for all those operations that bring about cognitions; and thus the operations of the Eye and other organs, which consists in the perceiving of agreeable or disagreeable things, become included. Operations leading to Action are of two kinds that having the Body for its cause, and that caused by the Mind.

These two expressions are explained by the Parishuddhi to mean—' that of which the body is the object' and ' that of which the Mind is the object'. For instance, the operation or effort involved in the actions of giving, stealing and the like, have all got the Body for their object; as it is the Body that is active; similarly, sympathy, jealousy and the like are operations having the Mind for their object; as it is the Mind that is active. This explanation of the two expressions— 'Kayunimiffa' and ' Manonimiffa'—are necessitated by the fact that otherwise all operations could be called both Kayanimiffa and Manonimiffa; as there is not a single action of man in which both Mind and Body are not the cause. This Activity is both virtuous and sinful; and is of lenkinds. Virtuous activity consists in—(1) giving shelter, (2) serving and (3) giving—these by the Body;—(4) telling the truth, (5) telling what is salutary, (6) saying what is agreeable, and (7) reading—these by Speech;—and (8) mercy, (9) aspiration, and (10) faith—these by the Mind. The contraries of these ten constitute the sinful activity.

"An objection is raised :---" All Activity being momentary,---it is impossible that it should be the cause of birth (as has been held). That is to say, in view of the fact that every operation exists for a moment only, it is not right to regard it as the cause of birth; and the fact of Activity not being the cause of Birth goes against what has been declared in Sūtra 2 above (where it has been stated that Birth is due to Activity)."

The answer to the above objection is that there is nothing in the present Sūţra which goes against what has been declared in Sūţra 2; as in Sūţra 2, the word 'Activity', 'Pravriffi', stands for the results of Activity; Virtue and Vice (Dhārma and Adharma) are the direct results of all Activity; and it is these that have been spoken of by the word 'Activity, in Sūtra 2; and the justification for this figurative use of the word lies in the fact that Activity is the cause of Virtue and Vice; and such usage is common; for instance, we have such assertions as 'food is the life of living beings' [where food, which is the cause, the means of living, is spoken of as life itself.]

# Dosa-Defect.-The Eighth Prameya. Sufra (18).

(SOTLA 18).—DEFECTS HAVE UBGING OR INCITING FOR THEIR DISTINGUISHING FRATURE.

<sup>• &#</sup>x27;Birth occurs in the next life ; hence it cannot be due to the activity of the present life ; as all such activity vanishes in a moment, and cannot be present when the effect-next birth-appears.'

#### Вназча.

#### [P. 28, L. 18 to P. 29, L. 4.]

\* Inciting' means causing activity. Attachment and the rest incite, or cause the activity of, man towards virtuous or sinful deeds; and whenever there is ignorance, there are attachment and aversion.<sup>†</sup>

Objection -" Everyone knows what these Defects are; why are they described by means of a definition?"

As a matter of fact, persons qualified by attachment, aversion and ignorance (which are the inciters to activity) are distinguished (or characterised) by their action: the man who has attachments does that action whereby he experiences pleasure or pain; similarly the man who has aversion, or one who has ignorance. [And it was necessary to bring out this fact of Attachment &c. being the cause of activity, in order to produce disgust against them; which fact could not have been brought out by the mere mention of Attachment and the other *Defects*; for] when the words 'attachment,' 'aversion 'and 'ignorance' are used by themselves, not much is expressed by them, ‡

*†*Both Attachment and Aversion arise from ignorance; and urge the man to activity; so that 'inciting' is a peculiarity of Attachment and Aversion; and this peculiarity subsists in the same substrate as the ignorance.—*Tatparya*.

In explaining this, the *Parishuddki* draws a distinction between *gravarfaka* that which incites) and *gravarfanā*, (the action of inciting). What incites men to activity are ignorance and the consequent Attachment and Aversion towards the object on which the activity turns; and the *inciting* is towards this activity, which is the means leading to that object, and with regard to which also there are ignorance and consequent Attachment and Aversion.

The *Idiparya* explains—All that the words express are the mere forms of the defects; and they give no idea of their being excitants of activity; and until this fact is brought out, there would be no disgust against Defects; as there is nothing wrong in Attachment or Aversion per se; it is only when they give rise to activity bringing pleasure and pain, that they come to be recognised as something to be shunned.

<sup>•</sup>The action of the *inciter* can be understood only after that of the *incited* has been understood; hence after the definition of Activity comes the turn of its excitant, Defects.—*Tāțparya*.

# VIRTIKA.

### [P. 85, L. 15 to 86, L. 2].

Defects have inciting for their distinguishing feature -The question is asked-"What is this says the Sütra. The answer is that inciting is that by reason inciting ?" of which man is forced, helplessly, to act; when a man acts, he is incited by the defects, Attachment and the rest; and thus this inciting being the cause of activity, is called pravartand, the means of activity (pravartayati iti.) : just as we have the words 'kāranā' (which means the means of doing), harana (the means of taking away) and the like. • But how is this inciting known ?"• The fact that there is inciting (done by the Defects) is known by each person directly by Perception so far as his own activity is concerned; and in the case of the activity of other persons, the fact is known by Inference; just as the fact of the Soul being the object of the notion of 'I' (self-consciousness) is known by each man directly by Perception; and this self-consciousness is not got at either by means of Inference or by means of "Why is it not known by Inference?" Word. For the simple reason that there is no probans available (whereby the inferential cognition could be obtained). "And why cannot it be got at by means of Word (Trustworthy Assertion)?" Because it involves a conception that cannot be obtained by any teaching or instruction. † From all this it follows that like Colour &c., the Soul of each man is perceptible to himself, while the Soul in another man's body is inferred from his activity and cessation from activity.

†That my activity has been due to a certain attachment or aversion in myself can be known by myself alone ; and cannot be taught to me.

<sup>•</sup>What is known is the *defect*, and not the fact of the defect being the excitant to activity '- Talparya.

### Prēļyabhāva, Rebirth.—The Ninth Prameya. Sūļra (19). \*REBIBTH CONSISTS IN BEING BORN AGAIN. BHIŞYA. [Page 29, L. 6 to, p. 29, L. 11.]

Having died, when [the Soul] is born again in an animate body, this *teing born again* constitutes the *Rebirth* of that [Soul], which is born,—*i.e.*, becomes connected with the body, the sense-organs, the mind, apprehension, and experience; and *being born again* consists in repeated connection with the body etc. ;—the word 'repeated' denotes recurrence.† The literal meaning of the word '*Prēļyabhāva*' may be thus explained :—When the Soul, subsisting in a particular animate body, abandons the body etc., previously occupied, then it dies (praiți); and when it takes possession in another body, of another body and sense-organs etc., it is *born* (*bha-vați*); so that '*prēțyabhāva*' is *birth* (*bhāva*) after *having died* (*prēțya*). The recurrence of this process of birth and death should be regarded as without beginning, and ending only with Final Release.

### VARTIKA ON SUTEA 19. [Page 86, Line 4 to Line 17.]

**R**-birth consists in being born again—says the Sn[ra; that is to say, Rebirth is transference into another body after the abandoning of the previously occupied body etc. The mention of the word 'repeated' (in the Bhāşya) is with a view to indicate the beginninglessness of metempsychosis; the meaning being that birth and death recur again and again; which shows that metempsychosis is without beginning.

"What is this Metempsychosis?"

Metempsychosis consists in the unceasing process of effective causal activity among Pain, Birth, Activity, Defect and Wrong Cognition (mentioned in Sūțra 2). And this process is without beginning; as there is no restriction as to

† Recurrence' of connections with body etc., implies also the abandoning of these.—Parishuddhi.

<sup>•</sup>The *Tatperys* omits to mention the ground for the treatment of Rebirth after Defect. The *Parishuddhi* says—Rebirth is the acquisition of the Body etc., down to Defects, after the abandonment of the same ; so that it is only <u>natural</u> that Rebirth should be dealt with after these.

any particular order of sequence among the said 'Pain' and the rest. For instance, if it were held that Pain comes first, then this could not be right; as there is no Pain without Birth;—If Birth were held to come first, this also would not be right; as there can be no Birth without Merit and Demerit;—if Merit and Demerit be held to come first, this also would not be right; as these are not possible without Attachment and Aversion ;—lastly, if it be held that Attachment and Aversion come first, this also will not be right; as Attachment and Aversion never appear without Ignorance.

"Then, Ignorance muy be taken as the beginning of the series." This also will not be right; as there is no Ignorance without Body and the rest.

This causal activity among Pain and the rest, down to Ignorance, being unceasing, constitutes 'Metempsychosis', 'eamedira',—also called (in the scriptures) 'Ajarañjarībhāva.'

"This Birth and Death (samsāra),—does it belong to the Soul or to the Mind?" If by 'samsāra' you mean the action (of entering and moving off from the Bodies), then it belongs to the Mind; as it is the Mind that actually moves, "samsarafi'; on the other hand, if by 'sansāra' you mean experiencing (of pleasure and pain) [as it really is], then it belongs to the Soul; as it is the Soul that experiences pleasure and pain.

> Fruition, Phala.—Tenth Pramēya. Sūfra 20.

\* FEUITION IS A THING PRODUCED BY ACTIVITY AND DEFECT.

BEISYA.

[Page 29, L. 18 to P. 30, L. 2].

Fruition consists in the experiencing of pleasure and pain, as every action leads to pleasure and pain. And as

<sup>•</sup> Fruition is the direct result of man's activity alone; but the Sutra adds Befects also with a view to show—(1) that detects are the cause of Activity and (2) that Pleasure and Path (which constitute Fruition) are the result of Defects also. It is only when the soil of the Soul is irrigated with the water of Defect that the seeds of Merit and Demerit produce the fruits of Pleasure and Pain '—Táparya.

pleasure and pain appear only when the Body, the Senseorgans, the Objects and Apprehension are present, what are meant to be included under the name 'Fruition' are pleasure and pain along with Body and the rest; so that all these (Pleasure and Pain along with Body &c.) constitute the Fruition, which is a thing produced by Activity and Defect. Each time this Fruition is received by man, it is relinquished by him; and each time it is relinquished, it is again received; and there is no end \* or absolute cessation of these receivings and relinquishings; and it is by this unceasing current of receivings and relinquishings that the entire worldly process is carried on.

This same (Body and the rest) [constitute Pain, defined in the next Sūțra].

### VÄRTIKA.

[Page 86, L. 19 to P. 87, L. 3.]

Everything that is produced, e.g., the Body and the rest, is a 'fruit' or 'fruition'; as every one of such things is brought about by the agency of Merit and Demerit. If we regard the primary or principal fruit alone as constituting *Fruition*, then the experiencing of pleasure and pain is the only *Fruition*; as this is what it ultimately leads to. But inasmuch as the experiencing of pleasure and pain is the

Vir. P. 87 final result of Merit and Demerit,—and there is no possibility of this experiencing without the Body, the Sense-organs and the rest,—with a view to this fact, it has been held that Merit and Demerit bring about the experience of pleasure and pain only after having brought about the Body &c.; so that the word 'fruiion' is applied, primarily, to the experiencing of pleasure and pain, and secondarily to the Body (and the rest).

The Pariskuddhi adds that the author of the Sāţra will himself describe in Adh. VI how Defects help Activity in the bringing about of Fruition.

On the word 'Arthah', 'thing,' in the Sūţra, the Tāţparya romarks—' The word is put in for including all kinds of Fruition, primary as well as secondary; the primary fruition consisting in Pleasure and Pain, and the secondary in the Body, the Sense-organs and the rest—says the Parishiddhi.

\* 'Nistha' is more end, and as there is some sort of an end to Pleasure and Pain &c. at each Dissolution, the Bhâqya corrects itself and adds the word 'Paryawasdnam' absolute (pari) cossulion (arasdna).—Tātparya. \*

# Pain, Duhkha.—Eleventh Prameya. Sütra (21).

PAIN IS THAT WHICH IS CONNECTED WITH ANNOYANCE.

BHISYA.

[P. 80, L. 4 to L. 7.]

By 'Annoyance "' here is meant suffering, injury. Every thing, (i. e. Body &c. and also Pleasure and Pain), being intermingled with *i. e.* invariably accompanied by, never existing apart from—pain, is inseparable from Pain; and as such is regarded as *Pain* itself. Finding everything to be intermingled with Pain, when one wishes to get rid of Pain, he finds that birth (or life) itself is nothing but pain; and thus becomes disgusted (with life); and being disgusted, he loses all attachment; and being free from attachment, he is released.

VARŢIKA,

[P. 87, L. 5 to Line 22.]

This same-i. e. the Body &c.—being connected with annoyance, is called 'Pain'. Primarily, it is pain alone that can be called 'Dukkha'. The word 'laksana' (in the Sūţra) means connection. All these—Body and the rest—are connected with pain: The body is the cause of pain; so that in this case the 'connection' consists in the causal relation; —the Sense-organs, the Objects and Apprehension are the instruments of pain; so that in the case of these, the 'connection' consists in instrumentality;—Pleasure never exists apart from Pain; so that in this case the 'connection' consists in invuriable concomitance. Primarily, however, Pain itself alone can be regarded as Pain [everything else being so regarded only on account of being counected with Pain].

Some people have held that everything is Pain, primarily by itself. But this is not right; as this is against

<sup>• &#</sup>x27;Annoyance' here stands for the *feeling* of annoyance; so that it refers primarily to Pain; but secondarily to the Body and the rest also; - all of which are necessary factors in the feeling of pain.—*Tatrarya*.

well-known facts of perception : Pleasure is something that is distinctly perceived; so that its existence cannot be entirely ignored. "But Pleasure is only a form of Pain. That is to say, Pleasure is only a particular phase of Pain; and it is nothing independently by itself." This also is not right; as the negative particle is not added to what is only a particular phase of a thing; in no case do we find the negative particle added to what is only a particular form of a thing: for instance, a particular Brähmana is never called a 'non-Brāhmana'; similarly if Pleasure were only a particular form of Pain, it could not be spoken of as 'not Pain' (as it is actually called). Then again, if there were no Pleasure, Dharma or Merit would be entirely useless. "Why so ?" Because Merit has been regarded as the means of Pleasure: so that if there is no Pleasure, there is no use for Merit. Nor will it be right to regard the mere negation of Pain as the result of Merit : as in that case Merit will come to have a negative result; that is to say, the result of Merit will become a merely negative entity; and [this would not be right; as] in ordinary experience we find a two-fold activity among men : One man acts with a view to obtain something desirable (when the result aimed at is positive), while another acts with a view to avoid an undesirable thing (where the result aimed at is negative); and if there were nothing desirable (i.e., affording pleasure), then this two-fold activity would not be possible [every action being, in that case, undertaken for the purpose of avoiding that which is undesirable, i. e., pain]. Then again (if there were no Pleasure) there could be no such advice as that ' Pleasure should be looked upon as Pain'; as there could, in that case, be no counter-entity (of Pain, in the shape of Pleasure, which could be looked upon as Pain). Lastly. (if there were no Pleasure) there could be no attachment : as no one is ever actached to Pain. For all these reasons we conclude that all things cannot be regarded as 'Pain' in

themselves; and the fact is that all things are regarded as 'Pain' because of the teaching that they should be so regarded [and in reality Pain is not the only entity].

> Apavarga—Final Release—Twelfth Pramēya. Sūţra (22). BHĪŞYA.

> > [Page 30, Line 8.]

When there is an end, an absolute cessation [of the series of receivings and relinguishings of Fruition], this is what constitutes Final Release, (which is thus defined) :---

Absolute freedom from the aforesaid (PAIN &c.) is Final Release (So. 22).

Внаяча.

[Page 30, Line 10 to Page 34, Line 2.]

Release is absolute freedom from that—from the aforesaid Pain, *i.e.*, from birth.<sup>•</sup> "How is this ?" When there is a relinquishing of the birth that has been taken, and the non-resumption of another,—this condition, which is without end (or limit) is known as 'Final Release ' by those who know what Final Release is. This condition of immortality, free from fear,† imperishable (unchanging), consisting in the attainment of bliss, is called 'Brahma.'

† The 'fear' meant here is the fear of being born into the world; the epithet 'unchanging' is added with a view to deny the view that Brahma evolves itself into diverse names and forms; the phrase 'condition of immortality' is meant to exclude the Bauddha theory that Release consists in the absolute cessation of the mind, ressembling the extinguishing of the lamp.—*Tātparya*. The *Parishuddhi* adda—Evolution is of two kinds - (1) the material object itself ceases and another bject takes place, which idea of evolution is favoured by the *Bauddha*; and (2) the object remaining intact, there is a change of its qualities; this form of **Evolution** being held by the *Saukhya*. Neither of these two is possible in the case of Brahma; as in either case it would be transient.

<sup>•</sup> The word 'fat' in the Sütra stands, not only for Pain proper, but also for all such products as the Body, the Sense-organs &c. to everyone of which the name 'Pain' is applied in its secondary sense.—*Tātparya*.

Some people hold the view that "in Final Release what is manifested is the eternal pleasure of the Soul, just like its Bhāgya, Page 31. and becomes happy."

This position is untenable; as there is no proof for what is here asserted; that is to say, there is neither Perception, nor Inference, nor Word of Scripture to prove that 'like its vistness, the eternal pleasure of the Soul is manifested in Final Release.'

Then again, the above view of the Ved Inliu meaning that (in Final Release) there is manifestation-i.e., feeling or experience-of the eternal (pleasure),-it behaves him to point out the cause of this 'manifestation.' In other words. when it is assorted that there is experienced a feeling or knowledge of eternal (pleasure), it is necessary to explain what is the cause of this munifestation-i.e. the cause whereby it is produced. (a) If it be held that the manifestation, or experiencing or feeling, of pleasure is eternil, like the pleasure itself [so that there can be no production of it by any cause, which, therefore, need not be pointed out],-then there would be no difference between the Soul released and the Soul still in the meshes of birth and rebirth. That is to say, just as the released Soul is endowed with the eternal pleasure and its eternal experience, so also would be the Soul that is still involved in birth and rebirth; as both these Souls are eternal [and would therefore be equally endowed with the pleasure, which also is eternal, and as such cannot be absent at any time, even before Final Release]. And if this be admitted, then people would be cognisant of the concomitance and simultaneity (of Final Release) with the result of of Merit and Demerit. In other words, we would be cognisant of the concomitance and simultaneity of the eternal feeling of eternal pleasure with that pleasure and pain which, brought about by Merit and Demerit in the substrates (viz., the souls) wherein they are produced, are experienced by turns! And there would never be any substrate (soul) where either pleasure or its experience would be absent; both of these

• We have the text 'vijā enam d and d m b ahma,' where all the three appear as synonymous; so that Brahma is of the nature of happiness; and as Brahma is eternal, the happiness also must be eternal. Hence in the phrase 'happiness of the Soul,' the proposition 'of ' has the sense of apposition. -Tapparya.

being ex-hypothesi, eternal! (b) If, on the other hand, it be held that the feeling of pleasure is not eternal, then it becomes necessary to point out its cause; i.e., if it be held that the manifestation in Final Release, of the eternal pleasure, is not eternal,-then it becomes necessary to point out the cause from which that manifestation proceeds. As regards the Mind-Soul contact it can be such cause only when aided by other causes; i.e., if it be held that the Mind-Soul contact is the cause of the said manifestation of pleasure, then it would be necessary to point out some other cause which aids the said contact (in bringing about that manifestation of pleasure).\* If Merit be held to be that auxilliary cause then the cause of this has to be pointed out; i.e., if Merit be held to be that other accessory cause, then it becomes necessary to point out the cause from which that Merit proceeds | which, through the Mind-Soul contact, brings about

Bhāşya, Page 32.

the manifestation of eternal pleasure]. The merit that is produced by Yogic

contemplation, being a product, must have an end ; so that if the product of this ephemeral Merit (in the shape of the said manifestation) were held to be eternal, this would involve an incongruity (the continuance of the product in the absence of the cause); consequently it is necessary to regard the said manifestation also as coming to an end on the cessation of That is to say, if the Merit brought about by the Merit. Yogic contemplation be the cause of the Merit that brings about the manifestation of pleasure, then, inasmuch as the continuance of the product after the cessation of the cause would involve an incongruity, it would be necessary to admit that, when the Merit ceases, --as it must cease, being itself a product,-there must follow the entire cessation of the feeling of pleasure. And when the *feeling* of pleasure is absent. the pleasure itself is as good as non-existent. In other words, if there is a cessation of the feeling of pleasure, on account of the disappearance of Merit, then it can not be true that eternal pleasure is felt; as there is nothing to determine whether the feeling is absent, because the pleasure itself is absent, or that the feeling is absent even though the pleasure is present. | Nor will it be right, with a view to escape from these difficulties, to hold that the Merit is eternal, as] there is nothing to prove that the Merit is imperishable; for the simple reason that it is something that

<sup>•</sup> Atome by itself, the Mind-Soul contact can bring about nothing.

is produced. That is to say, there can be no arguments to prove that the Merit produced by Yogic cont aplation does not perish; on the other hand, there is a clear argument to the contrary-viz., 'a thing that is produced is non-eternal [and Merit being proluced, must be ephemeral].' In case there were a person whose feeling of pleasure never ceased, he alone would be justified in arguing that the cause of that feeling (Merit) is eternal. But if Merit were eternal, there would be no difference between the man that has been released and one who is still in the meshes of birth and rebirth, -as we have already pointed out above (page 21, line 6). What we mean is that, just as in the case of the released man, the pleasure as well as the cause of the feeling of that pleasure are both eternal,-and there is no cessation of the feeling itself, for the simple reason that the Merit, which causes the feeling, is eternal,-so in the case of the worldly man also fas his Merit also would be eternal, its effects, in the shape of the feeling of pleasure, would also be eternal]. And this would mean that Final Release is co-existent with the feelings of pleasure and pain brought about by Merit and Demerit\*. It might be argued that (in the case of the worldly man) the presence of the Body, and the Sense-organs is the cause of obstruction (of pleasure-experience); but this cannot be right; as the Body etc. are for the very purpose of experience; and there is no reason to prove the contrary. In other words, our Opponent might put forward the explanation that in the case of the man who is still in the meshes of worldliness, the presence of the Body etc., obstructs the operation of the cause that leads to the feeling of eternal pleasure; so that there is a clear difference between the worldly man and the released man (in whose case, the Body etc., having fallon off, there is no obstruction). This however is not right; as the only purpose for which the Body, the Sense-organs and the rest exist is to bring about experiences; so that it is not possible that they should obstruct or hinder the experiencing (of eternal pleasure), specially as there is nothing to prove that there is any sort of experience for the Soul deprived of the Body and the rest.

[On p. 31. l. 2, the Author has said that there is no proof in support of the view that final kelease consists

<sup>•</sup> As it is such feelings that abound in worldly existence; and both worldly Existence and Release have been shown to be co-eterual.

in pleasure. In order to meet this, the Vēdāntin puts forward proofs in support of his view j (1) "Tue activity of of man is always for the purpose of obtaining what is desired".——If this be urged as a proof in support of the Vēdānta view, then we deny this; as activity is (also) for the purpose of removing the undesirable. That is to say, the Vēdāntin might put forward thefollowing argument.—•" The instructions in regard to Final Release, as also the activity of men desiring Final Release, are both for the purpose of obtaining what is desirable; and neither of the two can be absolutely useless." But this reasoning will not be right; as the ins-

Bbāşya, Page 33. Bbāşya, Page 33. may both be also for the sake of avoiding or removing What is undesirable. That the said activity is for the purpose of removing something undesirable (and not always for obtainting what is desirable) is also proved by the fact that there is nothing that is absolutely desirable, and not mixed up with an un resirable element; so that what is desirable also becomes undesirable; and thus when one is active towards the removing of something undesirable, he comes to remove or renounce also what is desirable; as removing by discrimination is not possible, *i. e.* it is not possible to remove the one without also removing the other.

As regards the renouncing of what is desirable, this 2. applies with equal force to the case of the Body etc. That is to say, the Vedantin might put forth the following argument-"We see, as a matter of fact, that people renounce the ordinary transitory pleasure and seek for the more lasting pleasure (which proves the presence of a pleasure that is ever-lasting; and this is Final Release)." But on the analogy of this argument, you might also argue that, because in or linary life people are found to renounce their ephemeral Body, Sense-organs and the rest, this indicates the presence of an eternal set of Body etc., for the released man; and in this manner you will have really established the singularity or aloofness and self sufficiency of the released man | + If it

• The real sense of this argument it thus explained by the Tatparga-" The scriptures urge men to activity towards the obtaining of Final Release; and in ordinary experience we find that it is only when a man desires something that he acts towards its accomplishment; an I as pleasure is the only thing desiral le it follows that Final Release must consist in pleasure.'

+ In seeking to prove that the man been nest fee. isolated, you come to prove that it is eternally beset with the entire set of Body, sense-organs and all the rest of it be urged that this would be against all proof, that would apply with equal force to both parties. In other words, it might be urged that the eternality of Body etc, being contrary to all evidence, it would not be right to assume such body etc. for the released man. But this could be said with equal force with regard to Pleasure also: that the eternality of Pleasure being contrary to all evidence, it is not right to assume such pleasure for the released Soul.

(3) Inasmuch as the absolute cessation of metempsychic pain could be spoken of as 'Pleasure,' there would be no incongruity (in the view that Pleasure consists in the cessation of Pain), even though there be scriptural texts describing Release as 'Pleasure.' That is to say, even though there be certain scripture-texts to the effect that 'absolute pleasure belongs to the released man,'—yet, such texts could very well be taken as using the word 'pleasure' in the sense of 'absolute cessation of pain;' in fact in ordinary parlance, we often find the word 'pleasure' used to denote the cessation or absence of pain. [So that the view that Final Release consists in the cessation of pain is quite in keeping with the said texts].

(4) Further, \* until there is a renunciation of the desire for eternal pleasure, there can be no attaining of Final Release; for the simple reason that all desire or attachment has been held to be a *bondage*. That is to say, if it be held that in Final Release eternal pleasure is manifested, then, in accordance with this view, whenever a man would put forth activity for the attaining of Final Release, he would do so only under the influence of a desire for the eternal pleasure; and being so influenced, he could never attain Final Release; as desire of all kinds has been held to be a bondage; and it is not possible that a man should be *released* while he is under *bondage*!

† On the other hand, when a man is free from desire for pleasure, there is no longer any feeling of aversion or

<sup>•</sup> The reading 'syaprahā ņš 'gives no sense ; the 'Pandit' edition, as also all the manuscripts consulted, read 'syāprahā ņš.'

<sup>&</sup>lt;sup>†</sup> This is added in anticipation of the fellowing objection :—" If Final Release consists of the removal of pain, then man's activity towards it could be due only to aversion to pain; and aversion is as much a bondage as desire." The sense of the reply is that there is real aversion only so long as there is no desire for something,—the aversion being against that which obstructs the fulfilment of the desire.

undesirability (with regard to anything). In other words, when the man's desire for eternal pleasure has disappeared, the desire for eternal pleasure being not there to obstruct (his path towards Final Release), [and the activity towards Release thus emanating from one who has renounced desire], whether the man does, or does not, really obtain eternal pleasure, in either case, there is no doubt as to his attaining Final Release.\*

### VARTIKA.

[Page 88, Line 2 to Page 91, Line 5.]

Absolute freedom from the aforesaid is Final Release says the SZ[ra. This means that Final Release consists in † absolute separation from pain, consisting in Body, the Senseorgans, &c.

Some philosophers ‡ have held that Final Release consists in the absolute manifestation of pleasure; they declare that Final Release is only the consummate manifestation or feeling of pleasure. But it cannot be so; as there is no proof; there is no evidence to show that the released Soul experiences eternal pleasure. "It is not right to say that there is no evidence; as there is restriction; § that is to say, the congregation, in the Soul, of pleasure brought about by several causes, is not possible unless there is a restrictive or determining agency (restricting a particular pleasure to a particular Soul); this (fact of congregation) proves that there

• Being free from all desire, when the man betakes himself to activity towards the sttaining of Belease, he does not care whether the eternal pleasure comes to him or not. As in any case, the activity being of a man who is purified of all desire, there can be no uncertainty as to his attaining Final Belease.—*Tatparya*.

† This epithet is necessary with a view to exclude the separation from Body &c., that occurs at the time of universal dissolution,—this separation not being absolute; the Soul being again saddled with these during the next creation.

<sup>‡</sup> The Vēdānşins who follow Chişsukhācharyā hold with him, that the Belease, that forms the highest end of man, consists in 'unlynited bliss.'

**29**0

is, in the Soul, an eternal pleasure, being determined or restricted by which the said pleasure brought about by several causes comes to inhere in that particular Soul." This however is not right; firstly, because this reasoning would apply, with equal force, to all those qualities of the Soul that are brought about by several causes; so that like eternal pleasure, eternal pain also, as well as eternal desire and the rest, will have to be assumed for the Soul ;-secondly [in case eternal pain is not assumed] the reasoning becomes inconclusive [as pain subsists in the Soul, and yet it is not eternal, so that the basic premiss itself of the reasoning becomes false |;-lastly, the precise signification of the word 'manifestation' has not yet been pointed out : in the assertion 'eternal pleasure is manifested', what is the precise signification of 'manifestation'? If\* 'manifestation' means cognition or feeling, then it is not possible to determine whether this cognition (of pleasure) is eternal or non-eternal.

If it be held that the cognition (of pleasure) is not eternal, then it becomes necessary to point out the cause (whereby the cognition is produced). If Mind-Soul contact be held to be the cause, then it should be pointed out what is the accessory cause of that contact. That is, if you hold that the Mind--Soul contact is the cause of the Cognition, then you should point out its accessory cause; because, as a matter of fact, we find that whenever such products as substances.

<sup>• &#</sup>x27;Pleasure is only a *quality*, not the very constituent, of the Soul ; and as such the pleasure must be something distinct from the Soul. Similarly, cognition also is a quality of the Soul ; and it is not possible for the Soul, which is without beginning or end, to be identical with cognition, which has both beginning and end; nor can the Soul be regarded as of the nature of cognition itself ; as in every act of cognition, all the three factors of cognition, cogniser and cognised object are apprehended as distinct from one another ; and even though the factors of cognition and cognised vary with each particular cognition, the cogniser remains the common factor in all ; all which goes to show that the *cogniser*, *i.e.*, the Soul, cannot be the same as the *cognition*. Then again, we have proved in the section on 'Perception' that Pleasure is not of the nature of *cognition* ; and we shall prove in Adhyāya IV that there is nothing that can be self-illumined or self-manifested—*Tāfparya*.

qualities or actions are brought about by contact, this contact never operates independently by itself. It might be urged that the Mind-Soul contact is dependent upon, and is helped by. Pleasure; but this will not be right; as this would be incompatible with the idea of 'Kaivalya' or Final Release. That is to say, if you hold that the Mind-Soul contact becomes the cause of cognition when it is aided by the eternal pleasure subsisting in the Soul,-this will not be right; as this would go against all idea of Final Release. \*For, just as this Mind-Soul contact of yours brings about the cognition of pleasure, with the help of its object alone (i.e., of this pleasure), independently of all other agencies,-so, in the same manner, a similar contact could bring about the cognitions of such objects as Colour and the rest, twith the help of these objects alone, (independently of all such other agencies as the Senseorgans and the rest); and this would do away with Final Release altogether; and the Soul would be beset with all

Vārţika Page 89. sorts of difficulties; as cognitions could be constantly crowding upon it (if they came independently of auxilliary agencies) [With a view to escape from these difficulties] it might be held that ‡the Mind-Soul contact brings about the cognition of (eternal)

† The Chaukhambha edition reads '*Viṣaydaanapēkṣamāṇaḥ*'; but from what has gone before, as also from the explanation supplied by the *Tāṭparya*, it is clear that the sense demands the reading with a single 'ma'.

<sup>‡</sup> "We do not", says the Vēdānţin, " mean that the contact depends upon the object alone; what we mean is that it requires exactly the same aid that it does during ordinary worldly existence; *i.e.*, during Final Release also it is aided by Merit; but with this difference that the Merit that brings about the cognition of eternal pleasure is that which is born of Yogic contemplation; while the cognitions of ordinary ephemeral pleasures are bought by ordinary merit."—*Téiparya*.

Downloaded from https://www.holybooks.com

<sup>•</sup> As a matter of fact, in ordinary worldly experience the Mind-Soul contact brings about the cognition of pleasure, with the help of the agency of Merit; if in Final Release, the contact bring about the pleasure independently of Merit, then in the cognition of colour etc., also the auxillary agency of the sense-organs would not be necessary !--Tdiparya.

pleasure, when aided by the merit born of Yogic contemplation. But this also will not be right; as in that case the cognition of pleasure (*i.e.*, Final Release) would cease on the cessation of the said merit. That is to say, after the Merit born of Yogic contemplation will have become exhausted, what would be there to aid the contact, —this has to be pointed out It will not b. right to assert that the merit born of Yogic contemplation is never exhausted; as all that is produced is bound to be transient (perishable). As a matter of fact, everything that has the character of a product is found to be transient; so that if it be held that the merit born of Yogic contemplation is eternal,—our answer would be that to say that it is *born* of Yogic contemplation and is yet eternal would be a contradiction in terms.

If, on the other hand, the cognition (of eternal pleasure) be held to be eternal, -this also will not be right. For the eternality of cognition (of pleasure) stands on the same footing as the eternality of pleasure itself; inasmuch as for the former also there is no proof, and there arises the same incongruity of there being no difference between the released man and the man who is still in the meshes of worldliness: and further (if the cognition of pleasure were eternal) there would be no experiencing of pleasure and pain by turns-(as is actually found to be the case); -then again, if a man were to experience pleasure eternally, then, there would be absolutely no use in making any efforts to obtain Final Release ; as no one ever wishes to get rid of, or be released from, pleasurable experience (and such experience is eternal, ex hypothesi); and (if the effort put forth were held to be for the purpose of obtaining release from pain], as it would not be possible to differentiate pain from pleasure (as the latter would be eternal), and to regulate his renunciation accordingly, when a man would renounce pain, he would

renounce pleasure<sup>\*</sup>; and further as the man would never experience any pain (his experiencing of pleasure being eternal), for getting rid of what experience would be put forth his effort (for Release)? "As there would be the tobstruction caused by the Body and the rest [which has to be got rid of, the said objection does not hold good; that is to say, the objection, that the man would for ever be experiencing everlasting pleasure, does not hold; as the Body and the rest are there to obstruct the experiencing of the everlasting pleasure." This is not right, we reply. For without the Body, the sense-organs etc., no experience is possible; so that [for the experiencing of the everlasting pleasure] an everlasting set of Body etc. will have to be postulated ! That is to say, just as for the released man you postulate an everlasting pleasure, so you will have to postulate for him an everlasting set of Body and the rest. And a nice release indeed would this be for him ! " The eternality of the Body, etc., would be contrary to well-ascertained facts of ordinary perception; and as such no such eternality could be reasonably postulated." This does not help you, we reply; for in the case of Pleasure also, the eternality of any such pleasure as belongs to us (mortal men) would be contrary to well-ascertained facts of perception; so that no such eternality could be reasonably postulated.

There is no proof [in support of the assertion that in Final Release there is manifestation of eternal pleasure]—says the Bhāşya (p. 31, l. 2);—against this the following objection

+ From what follows, 'prafiban lka ' appears to be the proper reading in place of 'prabandha '

<sup>• &#</sup>x27;Under our theory, pleasure becomes an object to be got rid of, as it is accompanied by pain. But if pleasure is eternal, it cannot be accompanied by pain; so that it could never be an object to be got rid of '-Tapparya; and if an ordinary worldly pleasure is not got rid of, there is no Final Release.

is raised :—\*"What the *Bhāsya* says is not true; as all activity is for the purpose of acquiring something desirable. As a matter of fact, we find that in this world whenever a

Vār. P. 90.

we find that in this world whenever a man acts, he does so for the purpose of acquiring something desired by him; and

people who desire to be *released* are found to act; this action also must be for the obtaining of something desired by them, and such an activity could be useful only if there were such a thing as *eternal pleasure* to be obtained. [And this is a sure proof for the existence of eternal pleasure]."

† This is not right; as activity is of two kinds: In ordinary experience we find that there are two kinds of activity: One is for the obtaining of something desirable, and another for the getting rid of something undesirable; so that it is doubtful whether renunciate mondicancy (which according to the Vēdānțin, is a means to Final Release) is for the obtaining of something desirable, or for the getting rid of something undesirable [and so long as this is doubtful, the mere activity of man cannot prove that *Release* consists in *pleasure*, and not in mere *freedom from pain*.]

"But we learn this from the Scriptures: We learn from the Scriptures that for the released Soul there is eternal pleasure; we are distinctly told that the released Soul becomes happy." This Scripture also has to be carefully pondered over: Does it assert the connection (of the Soul) with eternal pleasure, or the final and absolute separation from pain? As a matter of fact, in ordinary experience we find people, who have got rid of fever and other diseases, saying—' we are well

<sup>•</sup> The Scriptures urge man to activity towards the undertaking of measures for the obtaining of Final Release, --a man undertakes an activity only when he wishes to obtain something he desires ; --pleasure is certainly a desired thing ; -this proves that Release consists in pleasure. --Tätparya.

<sup>†</sup> The reasoning adduced by the Opponent is 1 y no means conclusive; as it is one-sided: all that it proves in that Release may consist of pleasure; it is equally possible that it may consist in more caseation of pain.—Taipurya.

and and happy.' \* Further, if the contemplative renunciate were urged to activity towards the attaining of Final Release by a desire for pleasure, under the impression that the pleasure is eternal,-then it would be impossible for him to obtain that release at all. "Why so?" + For the simple reason that all desire and attachment have been declared to be bonds: desire is a source of bonduge [so that one who has desire can never be free] "Even if the man were urged to activity towards the attaining of Release by aversion,-i.e., with a view to get rid of pain,-even so he could not obtain the Release; as Aversion also is a bond; as both attachment and Aversion **9.70** It is not so we reply; because of sources of bondage."1

• This further reasoning is put forward to meet the following argument of the Opponent :-- "In all our verbal construction we accept the secondary or figurative meaning orly if the Direct or Primary meaning is found incompatible. In the text 'the released Soul is happy', we find no incongruity in the word 'happy' signifying pleasure ; so that there is no justification for taking it in the secondary sense of freedom from pain". Finding this reasoning to be sound, the Author puts forward another argument against the idea of Release consisting in pleasure.

† 'Merit and demerit are real, and not the products of mere illusion; and these can be set aside only by a man who has got rid of all desire. So long as a man is beset with desires, he has to set himself to obtaining the things desired and discarding them after they have been enjoyed; and this process going on without ceasing, the man has no chauce for release; the desire is a *bondage*; so that the man seeking for Release should avoid all activity due to desire. Otherwise, even though the desire be only for the lasting pleasure attainable in Release, yet when it has once obtained a footing, the devil of desire will eventually make the man dance attendance on all the several objects of ordinary enjoyment; and would throw him off further from Final Release. For this reason no man should allow any footing to desire in any form. In view of this, in all the scriptural texts that speak of Final Release as 'eternal bliss,' we cannot take the word 'bliss' in the direct sense, of *pleasure*; it must mean *absence from pain.'—Talparys*.

‡ "So that the Nyāya view of Release being freedom from pain is open to the same objections as the Vedānţa view that it consists in pleasure." The sense of the reply to this, given in the next sentence, is as follows—The obtaining of pleasure is detrimental to Final Release on account of its being inextricably mixed up with design and attachment, which are the direct opposite of that Vairdgya, Freedom from Pussion, which is essential for the man seeking release; the Discarding of

Downloaded from https://www.holybooks.com

its being not detrimental: the discarding of pain is by no means detrimental; as a matter of fact, the man (seeking to get rid of pain) is not moved by aversion; and as he is not moved by aversion, he obtains the freedom from pain, which is not detrimental (to Final Release).

" \* [The Author next takes up the conception of 'Final Release' propounded by the Bauddhas].

Other philosophers have held that it is the Mind that is released; as Desire and the rest (which are the source of bondage) have power over the Mind only; as a matter of fact, it is the Mind which, under the influence of desire &c., comes to be produced under various conditions and in diverse substrata; and so far as the Soul is concerned, Desire and the rest have no influence over it.

This view of Final Release however is not right; as if this were true, then Final Release would be accomplished without any effort; that is to say, those people who hold that Final Release consists in either the non-production or the destruction of the Mind,—for them Final Release would be accomplished without any effort. "Why so?" For the

pais, on the other hand, is not necessarily mixed up with aversion: a man suffering from pain is not necessarily angry; and anger is the baneful factor in aversion; so that in this latter case there is nothing that is detrimental to the obtaining of Final Belease.—*Tāțparya*.

• This is thus explained by the *Tilparya* :—It is only that which is beset with worldliness that can be *released*; Desire, Aversion &c. are the sources of worldliness; these cannot subsist in the Soul, which is eternal; nor can they beset the Soul with worldliness; as that which is eternal can never have its charactor modified in any way: there can be no addition to, or subtraction from, its essence. To this effect we have the following saying :—" Rain and heat have no effect "upon the ākāsha; they effect only the skin; if then the Soul is like the skin, then it is transient; if, on the other hand, it is like ākāsha, then it cannot be effected by any pleasure or pain." The Mihd, however, is a product, and as such, capable of being beset with worldliness, by desire and the rest; so that it is the Mind which, on being freed from desire &c., becomes released.

simple reason that the birth or production of a thing is only for being destroyed (under the theory that everything lasts only for one moment); so that the destruction of that which is born or produced would come about without any effort. "But Final Release consists (not in the destruction of the Mind, but) in the non-production of the series (of momentary minds)."\* This also cannot be accepted; as such non-production is

Vártika, Page 91.

not possible : it is not possible to bring about

the non-production of the Series; as the Series consists only in the unceasing flow of causes and effects [and this can never come to an end; as so long as the cause is a cause, it cannot but bring about its offect]t. " What is brought about is the non-production of what has not yet been But the non-production of what is not produced produced." is already present; so that what is it that is brought about? Thus then, we find that under no circumstances is it possible for Final Release to belong to the Mind.

"To whom then does Final Release belong ?" It belongs to one who is released. "Who is it that is released ?" It is "What is Final Release?" the Soul? It consists in separation or freedom from Pain and the rest.

+ 'There can be no non-production of that which has been produced ; nor can the series be brought to an end; as in the case of no series is it possible to have the last moment. For does this last moment produce something or not? If it does, then there is no cessation in the line of cause and effect. If it does not, then being unproductive and thus having no effective action, it is as good as nonexistent (as according to the Bauddha, existence consists only in effective activity); and when that moment is non-existent, the moment preceding it, which is said to be its cause, is not effective ; so that also is a non-entity; so on and on carrying the same process backwards, the entire series becomes a non-entity. Under the circumstances, whose cessation would constitute Final Release ?'-Tātparya.

<sup>•</sup> The series of Minds, wherein each individual is the cause of that which follows it, is usually without beginning or end ; but it can come to an end only in the case of a man all whose weaknesses of ignorance and tendencies of past acts have been destroyed by the direct realisation of the Self; and this destruction consists in the fact that there is no production of a Mind-unit in the never-ending series ; so that the series comes to an end ; and this is 'Final Release.'-Tatparya.

## LECTURE (4).

#### The Preliminaries of Reasoning.

## [Sufras 23 -25.]

#### DOUBT.

#### Ви**д**яча.

# [Page 34, L. 3.]

•Doubt having been the next in order to appear in the Mention of Categories (in Sū. 1), it is now— after the definition of its predecessor, 'Objects of Cognition'— time to put forward its definition. This definition is now put forward—

## Sūįra (23).

DOUBT IN THAT WAVEBING JUDGMENT IN WHICH THE DEFINITE . COGNITION OF THE SPECIFIC CHARACTER OF ANY ONE OBJECT IS WANT-ING, AND WHICH ARISES BITHER—(A) FROM THE COGNITION OF THE CHARACTERS COMMON TO THE OBJECTS CONCERNED, OR (B) FROM THE COGNITION OF CHARACTERS THAT SERVE TO DISTINGUISH AN OBJECT FROM DIVERSE OBJECTS, OR (C) FROM THE PRESENCE OF CONTRADICTORY OPINIONS ;—AND THE APPEARING OF SUCH WAVERING JUDGMENTS IS DUE TO THE UNCRETAINTY ATTACHING TO PERCEPTIONS AND NON-PERCEPTIONS.† (SO. 23).

### BHISYA.

[Page 34, L. 6 to Page 35, L. 15.]

(A) \$ Doubt is the wivering judgment in which the definite cognition of the specific character of any one object is wanting, and which arises from the cognition of characters common to the

•The Parishaddki attempts a rational explanation of the order of sequence : All knowledge depending on Pramāņas, and Pramāyas being the objects sought to be known, these two have been first mentioned. Reasoning in all its details is what is to be explained next; and among all these details Doubt comes first, as until there is Doubt there is no occasion for any reasoning.

<sup>†</sup>The interpretation of the Sū. by the *Bh44ya* is different from that of the *Varfita* and the *T4fparga*. According to the former the Sūtra puts forward five kinds of Doubt; according to the latter it lays down only three. The translation follows the latter interpretation.

According to the Bhays, there are five kinds of Doubt described in the Sātra The first kind of Doubt arises from the cognition of common characters.

objects concerned. For example, when a man perceives the qualities of length and breadth, which are common to man and post, and is desirous of detecting the previously percoived characters that would distinguish the one from the other, there arises in his mind the idea of 'whether it is this or that', and he cannot ascertain whether it is the one or the other; it is this uncertain cognition that constitutes Donbi; and what rais is the Doubt is the 'want', " appearing in the form 'I can perceive only such characters as are common to the two things, and do not perceive the distinctive features of either'; it is for this reason that Doubt is called 'that wavering judgment in which the definite cognition of the specific character of any one object is wanting'.

+ (B) Doubt arises from the cognition of characters that serve to distinguish an object from diverse objects. This is to be thus explained : The word ' aneka', 'diverse', denotes all those things that are homogeneous and heterogeneous to the thing in question; and Doubt arises from the cognition of characters that distinguish the thing from, or exclude t those 'diverse' objects; as a matter of fact, the specific character of a thing is found to serve both purposes--things are distinguished by them from homogeneous as well as heterogeneous things; A. g. the presence of Odour distinguishes the Earth from Water and the rest (which being substances are homogeneous to Earth), as also from Qualities and Actions (which being not substances are heterogeneous to Earth). [As an example of Doubtarising from the cognition of the specific character of a thing, we have the following1-Sound is found to be endowed with such a specific property. in the form of being produced by disjunction; and the cognition of this character gives rise to the Doubt as to whether Sound is a Substance, a Quality or an Action. Insenuch as the specific characters of things are found to serve both purposes (of distinguishing from homogeneous as well as

The *Tâiparya* remarks that the mere presence of this 'waat' is not enough ; what is meant by the word 'want', '*Apikia*', is the remembrance of the distinctive characters of the things, along with the non-perception of those characters. This is supported by the last sentence of the *Bhāya* (p. 35, L. 15).

+This is the second kind of Doubt.

The phrase ' fasya anëkasya dharmah ' is explained by the Väriika and the Jäfparya in two ways :--(1) anëkam, fasmät vishësako dharmah; the words fasmät vishësakuh being supplied; (2) fasya anëkasya dharmah, vyûcarfakafûyû. Both interpretations have been combined in the translation. heterogeneous things), there naturally arises a Doubt as to whether—(a) being an entity, Sound is a substance distinguished by the said specific character from Qualities and Actions, or (b) being an entity, it is a Quality distinguished by that character or (c) being an entity, it is an Action distinguished by that character<sup>9</sup>. And in this case ' the want of cognition of the specific property' is in the form of the idea, 'I do not perceive any such character as would definitely indicate any one of the three (Substance, Quality and Action,'.

(C) Doubt arises from the presence of contradictory opinions. Contradictory notions entertained with regard to one and the same thing constitute 'contradictory opinions'; 'contradiction consisting in mutual enmity, i. e, incompatib lity. For instance, one system of philosophy asserts that 'the Soul exists', while another declares that 'there is no such thing as Soul', and when no proof one way or the other is available, there is an uncertainty as to the truth; and this constitutes Doubt.

• This explanation has been a lded with a view to the objection that it is only the remembrance of common properties that gives rise to Doubt, and not that of specific or exclusive properties. The sense of the exp a ation is that, (1) in the case of the Earth, we know that it is an entity, and on perceiving that it has Odour, we naturally are uncertain as to its being either a Substance or a Quality or an Action ; all of which are entities, like the Earth ; and the presence of O lour distinguishes t equally from all the three. (2) Similarly in the case of Sound ; it is an entity, like Substance, Quality and Action ; so when we find that the presence of the character of being produced by disjunction distinguishes it equally from all entities just as much from other Qualities, as from Substances and Actions—there arises the Doubt as to its being a Substance, a Quality or an Action.

This is the Bhaga's answer. The answer of the Värtiks is thus explained by the Tatpary ---It is true that the character of being produced by disjunction has never been found in Substances, &c., but the absence of that character is found equally in all--in Substances, in Qualities, in Actions; so that when Sound is found to possess this character, as also the character of being an entity,--the latter bring common to Substances, Qualities, and Actions--there arises the Doubt -- 'Being distinguished from Substances and Actions by the character of being produced by disjunction, is Sound a Quality? Or being distinguished from Qualities and Actions, it is a Substance? Or being distinguished from Qualities and Substances, it is an Action? Thus in this case the specific character brings to mind the other things only by negation, *i. e.*, by reason of its absence being common to all

**†**This is the third kind of Doubt.

•(D) Doubt also arises from uncertainty attaching to perceptions. As a matter of fact, there is perception of really-existing water, as in the tank and such other reservoirs; there is perception also of non-existent water, in the rays of the Sun (appearing in the mirage); so that when in any particular case there is perception of water, and yot there is no proof available which would determine the real character of what is perceived, there arises a Doubt as to whether the water perceived is really existent or non-existent.

 $\dagger$ (E) Doubt also arises from uncertainty attaching to non-perceptions. As a matter of fact we find that even really existing things are not perceived; *c. g.* we do not perceive the water within the roots and branches of trees; and there is non-perception also of what is non-existent; *e. g.* of what is not produced at all, or what has been destroyed; so that whenever there is non-perception of a thing, there arises the Doubt as to whether what is not perceived really exists, or it does not exist at all. In this case also the 'want of cognition of the specific character' is as before.

<sup>‡</sup>In the first two kinds of Doubt, the 'common properties' and the 'properties distinguishing an object from diverse objects' are such as subsist in the object cognised; while in the fourth kind, the 'perception' and 'non-perception' subsist in the cognising person; and it is only by reason of this difference or peculiarity that these have been mentioned separately.

The definition common to all forms of Doubt comes to be this:—"Doubt is a wavering judgment which arises from the apprehension of things possessed of common properties, proceeding from the cognition of common properties, and depending upon the remembrance of specific properties."

The Vartika takes the first sanina larma as a Bahuvrihi compound.

<sup>•</sup>This is the fourth kind of Doubt, according to the Bhasya.

<sup>†</sup>This is the fifth kind of Doubt, according to the Bhāşya.

**<sup>‡</sup>The** Bhasya regards the 'uncertainty attaching to Perception' and the 'uncertainty attaching to non-perceptions' as distinct and independent causes of Doubt; and so proceeds to show here that the Doubts aroused by these uncertainties cannot be include i in those aroused by the cognition of 'common characters' or of 'characters distinguishing the object from diverse objects.' This view is controverted by the Variaka (Page 99, Line 21, et. seq.)—Taiparya.

## Varțika.

## [P. 91, L. 6 to P. 105, L. 7.]

After the treatment of the Objects of Cognition comes the turn of *Doubt*. What is meant by the words of the *Bhāsya*, 'sthānavato laksaņam' is that the Sūţra now proceeds to provide the definition of *Doubt*, whose turn comes after the *Objects of Cognition*.

What the Sāțra means is that there are three kinds of Doubt—arising, (1) from the cognition of 'samānadharma'; (2) from the cognition of 'anēkdharma' and (3) from 'siprațipețți'; the other words of the Sāțra being taken as qualifying adjuncts. The meaning of the definition is that that cognition, which does not apprehend with certitude the character of this or that particular object, and which arises from the three aforesaid causes,—the cognition of 'samān dharma' and the rest,—is called 'Doubt.'

• "The assertion that the cognition does not apprehend with certitude involves a contradiction in terms; it forms the very nature of a cognition that it apprehends things with certitude; so that if a cognition does not apprehend an object with certitude, it loses its character of ' cognition.'"

This is not right; as the cognition makes known itself; what is apprehended is the form of the cognition itself; and it does not apprehend the form of the object; and thus, inasmuch as the Doubt (even though not apprehending its object) is itself apprehended, *prativate*, it is rightly called '*pratyaya*', 'Cognition' [the word '*pratyaya*' literally meaning *prativate yah sah*].†

<sup>•</sup> We perceive in this an echo of the well-known declaration of Shabsrariprațișid dhamida muchyati brav ți vița thanchsti ;

<sup>†</sup> This answer is given by the Varilka on the admission that the word 'pratyaya' stands for certain cognition; so that even though there is no such cognition of the object of Doubt, there is such cognition of the Doubt itself. As a matter of fact however the word 'pratyaya' is only a synonym for 'jfana,' simply cognition, net necessarily cognition with certitude; and as this generic character of 'cognition,' belongs to Doubtful Cognition also, there is nothing wrong in its being called 'prefyaya.'--Tātpurya.

[A.] In the compound 'samānadharmopapaļļēķ', 'the word 'samāna' means common, the meaning of the compound being 'from the cognition of the common character.' 'What is it that is common? Is it a quality or a genus ?\* If it is a quality that cannot be 'common.' Why so ? Because the shape (of uprightness as belonging to the Man and the Post) subsists in a single substance; as a matter of fact, shape (which is a typical quality) subsists in a single object; how then can it be common to a number of objects? Nor will it be right to regard the genus as the common factor; as such a genus would not subsist in the substance; for instance the genus of 'uprightness' subsists, not in the upright substance, but in the Var P. 92. quality, the particular shape; and the genus of

'uprightness' subsisting in the shape cannot give rise to doubt in regard to the substance. Specially as quality (the upright shape) is known with certitude (before the doubt arises as to the nature of the thing); so that, that wherein the genus subsists is already known with certitude." This objection is not well taken; as the word 'sādhāraņa', 'common,' is explained differently (from what has been made as the basis of the objection). We do not mean that it is either the quality or the genus that is 'common'; what is meant by 'common' is similarity; the idea (in the case of Doubt) being in the form—' the two things, man and post, that I have previously seen, possessed the property of uprightness, and the property that I am perceiving now is one that is similar to that uprightness.'

+ By the 'upspeffi' of that 'common character' is meant its cognition; so that the clause 'samānasya dharmasya

+ This anticipates the objection that the word ' upspaff: ' denotes mere existence, and there is nothing to show that the süfra means the cognition of common property.

304

<sup>•</sup> In the case of the man and the post, *worightness* is one of the 'common' characters; is this uprightness a quality or a genus? If it is a quality, it cannot be common to two things. If it is a genus, then the genus 'uprightness' will subsist in the quality of uprightness, and not in the upright *object*, man or post.

uprpuffer,' is equivalent to 'sadrishasya dharmasya upalabdhet,' from the cognition of the common character.'

"Why does not the sufra simply use the word 'samūnadharmopalabdhe;' [if it really means what it is said it does mean]?" (a) Inasmuch as the sense that would be got at by the use of this word is implied even without its use, it would be superfluous to reiterate what is already implied. "By what is the sense implied?" By the term 'vishean peksah' ' in which the definite cognition of the specific "How is it implied character of any one object is wanting.' by this term ?" What is meant by the 'apeksa' or 'want' of the 'specific character' is its 'akankea', 'a desire for it ;' and this desire or want is possible only if the ' specific character' is not-cognised; so that what the Sūtra means by saving that there is 'want' of the specific character, is that the specific character is not cognised, and this clearly implies that the common character is cognised; for if it were meant that the person perceives neither the specific nor the common character, then it would be absolutely useless to add the phrase ' wanting in the cognition of the specific character. ' And on the strength of this we conclude that the fact that the common character is cognised is implied. (b) Or. we may regard the word 'upapa!!i' as synonymous with upalabdhi; the word 'upapalli' denoting capability of being amenable to the Iestruments of Right Cognition ; and this is the same as being cognised; as a thing whose existence is not cognised is as good as non-existent [so that when the word ' upupa [ [ i ' denotes existence, it implies its cognition ]. "But what similarity would there be between the existent and the

There are three answers to this objection ; the second is given in the text, line 14 ard the third in the line 18. The three answers are thus summed up in the Parishuddhi—' The purport of the first answer is that what is meant as cognition is implied by the word vishiedpikeak; the second answer means that word 'spapaffi' itself has several meanings; and one of these is cognition; the sense of the third answer is that even though the word 'uppaffi' directly denotes mere existence, yet it indirectly indicates cognition also.

non-existent [Which similarity you speak of by saying that it would be 'as good as non-existent']?" The simi. larity would consist in both not being the object of the Instruments of right cognition; the non-existent thing by itself is never an object of an instrument of right cognition so that the non-existent thing also fulfills the condition of being not cognised. [Hence 'existence' may be regarded as synonymous with 'being cognised.'] (c) Or the word 'upepatti' denoting the object of cognition, may be taken as implying the cognition itself; so that the phrase 'the upapa !! of the common character' may be taken as implying the cognition of that character : and this method of interpretation is quite in keeping with the methods employed in common usage; for instance, men make such statements as ' fire is inferred from Vår. P. 93. smoke,' where the word 'perception' is not meutioned; and yet on the strength of what is actually meant by the assertion, people accept the presence of the word ' perception,' and the sentence to mean ' having seen smoke one infers fire.'

Some Logicians make the following observations in regard to the Satra]-" It is necessary to add the word 'avyavachchhēdahēloh,' to the definition. That is to say, the word 'samānagharmopapaļļēķ' that we find in the Safra should have added to it the word 'avyavachchhēdahēlog, -the sense of the definition being that 'Doubt is that wavering judgment which arises from the cognition of that common character which does not serve the purpose of preclusion'. This addition is essential, as the mere 'cognition of common character' cannot be a source of Doubt; if it were, then the cognition of the character of being a product would also give rise to Doubt (as to the transitory character of Sound); as it is a character common to all transitory things; as a matter of fact, however it does gives rise, not to Doubt (but to certainty, in the shape of the

conception 'sound is transitory because it is a product'); and this for the simple reason that it does serve the purpose of precluding (the absence of transitory character from Sound)."\*

This position is not tenable, we reply. For it is clear that the true significance of the epithet 'samāna', 'common', has not been grasped. As a matter of fact it is not possible for one and the same character to be 'common' and 'serve the purpose of preclusion or differentiation'; as that character is said to 'serve the purpose of preclusion or differentiation' which, while subsisting in all things meant to be homogeneous with the thing in question, does not subsist in anything heterogeneous to it; and certainly this is not what is meant by a 'common' character; that character is called 'common' which, while subsisting in all things meant to be homogeneous with the thing in question, does also subsist in things heterogeneous to it. For these reasons it is not necessary to add the qualification 'which does not serve the purpose of preclusion.'

<sup>†</sup>The meaning of the *Satra* is that the 'common character', as described above, when perceived, becomes a source of Doubt. "Does the common character alone, by itself,

•The author puts forward here an exception taken to the definition by an Ekadeshin.--

His view is as follows—There are many common characters that also serve the purpose of preclusion; e. g., being a product is common to all transitory things; subsisting in Sound as also in the jar and all such things; and yet the cognition of this character of being a product is not found to give rise to a Doubt with regard to eternality; and the reason for this lies in the fact that the said character does serve the purpose of precluding the absence of transitory character from Sound. Hence it is necessary to add that the common character, whose cognition leads to Doubt, is one which does not serve the purpose of preclusion. Otherwise the cognition of arising from the premise 'Sound is a product' would fall within the defimition of 'Doubt'.—Tdiparya.

† In the case of the man and the post, the perception of hands, face, &c., and. the non-perception of crevices, &c., would give rise to the certainty that it is a man; on the other hand, the perception of the crevices and the non-perception of hands, &c. would bring about the certainty of negation, that it is not a man. So by the phrase 'on account of the uncertainty attaching to perceptions and non-perceptions,' what is meant is the absence of any means of cognition which could afford either the

give rise to the Doubt ?' No; it does so, not by itself alone, but through ' the uncertainty that attaches to perceptions and non-perceptions.' That is to say, Doubt is aroused, because "Ta perceptions and non-perceptions are not certain. this enough to give rise to Doubt ?" By no means, we reply: Doubt arises only-(1) when there is a want or absence of the cognition of the specific character of any one thing, (2) when there is cognition of a common character, and (3) when there is no certainty in perception or nonperception in regard either to the thing being this or that particular thing, or to its being not that thing . so that the ' want of cognition of the specific character of any one thing ' is an essential element in the cause of Doubt. " Does the cause of Doubt consist in all the aforesaid three factors collectively, or in each of them severally?" Our reply is that it consists in all the three taken collectively. For [in case each of the three were regarded as a cause of Doubt] (a) if 'the cognition of common character' alone were the cause of Doubt, then in a case where one does perceive the specific character of one of the two objects, as 'the cognition of common character' would be there, there should arise Doubt in his mind\* [whereas as a matter of fact when there is perception of the specific character of any one object, there is no Doubt];---(b) similarly, if merely the 'uncertainty attaching to perceptions and non-perceptions' were the sole cause of Doubt, then, inasmuch there may be cases 88 where there is no perception of any common character, and yet there is 'uncertainty attaching to perception and nonperception', Doubt might arise in such cases also +;-(c)

<sup>o</sup> This absurdity becomes precluded if the 'want of cognition of the specific character' of any one object, is made a necessary factor in the cause of Doubt.

+ This absurdity is preclude I by having as a necessary condition, 'the cognition of common character.' Instances of such a contingency would be with regard-

**308** 

positive cognition, or its contrary, the negative cognition. And the phrase ' want of cognition of the specific character' indicates that and there is remembrance of such a character.—Taparys.

lastly, if 'wanting in the cognition of the specific character of any one object' were the sole condition for Doubt, then, even in a case where the man does not perceive any ' common character', as there may be remembrance of the specific character of an object,\* (and no cognition of that character, as this cognition would be wanting) Doubt should be possible. Similarly, [ in case only any two of the three conditions mentioned were regarded as the cause of the Doubt] (a) if we accept the definition to consist of only the two clauses-" arising from the cognition of common charactors' and ' on account of the uncertainty attaching to perceptious and non-perceptions,'- [ that will not be a correct definition as], no Doubt arises in the mind of a man who is either moving along in a boat, or on a convoyance, or is swinging in a swing t; -(b) similarly, if, the definition consisted of only the two clauses, - ' on account of the uncertainty attaching to perceptions and non-perceptions' and wanting in the cognition of the specific character of any one object',---then. Doubt would be possible in regard to things not perceived at all §;---(c) lastly, if, the definition consisted of only

to such non-entities as the 'seven h flavour' or 'the tenth substance '—the Doubt being in the form 'this thing that' I perceive, is this the seventh flavour or the tenth substance?'.—Tatparys and Parishuddhi.

• And there is no perception of that character; so that there is want of cognition of it.

† This absurdity is precluded by making the cognition of common character a necessary condition.

<sup>‡</sup> When a man is moving in a boat or in a litter, or is swinging on a swing, he perceives a certain thing with height and thickness.—thus there being a cognition of a character common to several things,—and there is no certainty as to the thing being this or that particular thing,—until there comes to the mind of the man some idea of the specific character of either a *tree* or an *elephant*. Whereas if the first two conditions alone were assential, Doubt should arise in this case also. It does not arise however; and the reason lies, in the absence of the third condition— *Tatparya*.

5 As in this case both the said conditions would be present; what is absent is the cognition of common characters; and it is on account of this absence that no Doubt does arise.

the two clauses.- ' arising from the cognition of common characters'and ' wanting in the cognition of the specific character of any one object, '---then, as a matter of fact, we find that in a case, when there is ' cognition of common characters, 'ana there is also the 'want of cognition of the specific character of any one object,' yet, if there is a certainty attaching to the perception or non-perception of the thing concerned, there does not arise any Doubt at all; \* for instance. an observer perceives a thing, as endowed with certain generic and specific characters, and there arises a certainty in his mind, as to what he is perceiving and what he is not perceiving ;--that same observer having moved off to a certain distance from the thing, the specific characters, which subsist in fewer things, cease to be perceived by him, on account of the remoteness caused by his motion, and what he perceives is only that common or generic character, which subsists in a large number of things, --- (notwithstanding this however) the certainty in his mind is still there, as to what he is perceiving, and what he is not perceiving, and there is also present in his mind, the idea of the specific character of the particular thing ;---and yet with all this, there does not arise any Doubt [which, under the proposed definition, should arise]. Thus then, having rejected the views that the

• Going to the garden, the man perceives an object, with leaves and blossoms with birds singing on the branches, and so forth; he knows with certainty, that he is perceiving the tree, and he is not perceiving the elephant ;— he moves off to a distance, from where he fails to perceive the branches and flowers, &c., which belong specially to the tree, and perceives only the height and thickness, which are properties joommon to the tree and the elephant; but the certainty in his mind is still there, as to the thing being a tree, and not an elephant ; and he has in his mind the idea of the presence of branches and flowers, &c., so that there is ' cognition of common characters '; there is also a ' want of cognition of the specific characters of the thing'; and, thus both the conditions of the proposed definition being present, there should arise a Doubt can arise, as long as the man is certain as to its being a *irree* and uot an *elephant*; so that absence of this certainty should be an essential factor in the defini ion of Doubt.—*Taiparya*.

definition consists of any one or any two clauses only (of the Sūtra), we conclude that all the three clauses collectively constitute the correct definition of Doubt. We have rejected each of the three single-clause definitions proposed to consist of either-(a) the clause 'arising from the cognition of common characters', or (b) the clause 'from the uncertainty attaching to perceptions and non-perceptions', or (c) the clause ' wanting in the cognition of the specific character of any one object '; and we have also rejected each of the three two-clause definitions proposed to consist of either ---(a) the two clauses, arising from the cognition of common characters, and 'from the uncertainty attaching to percep. tions and non-perceptions', or (b) the two clauses, 'arising from the cognition of common characters' and 'wanting in the cognition of the specific character of any one object', or (c) the two clauses, 'from the uncertainty attaching to perceptions and non-perceptions' and 'wanting in the cognition of the specific character of any one object ';-- all these rejections are obtained by accepting the definition to consist in all the three clauses collectively. And it is for this reason that the author of the Sütra has defined Doubt as ' the wavering judgment in which the definite cognition of the specific character of any one object is wanting, and which arises from the cognition of common characters;... being due to the uncertainty attaching to perceptions and non-perceptions':--from which it is clear that the whole of this forms a single definition.

The Snfra uses the word 'vimarsah', 'wavering judgment'; and this means judgment pertaining to several (mutually contradictory or incompatible) things. That such is the meaning is proved by the fact that Doubt touches—*i. e.* apprehends—both the things (with regard to which the Doubt arises).

The word 'samshayah' has the sense of the abstract noun, being equivalent to 'samshifih', 'the character of being asleep'; or it may be taken as having the sense of the instrumental, the meaning being 'that by which the Soul is made to sleep',—*i. e.* by the force of which the Soul appears as if it were asleep. "What is the import of the simile ('the Soul is as if it were asleep')?" The similarity lies in the non-ascertainment of the real character of things<sup>\*</sup>.

The above explanation of the first kind of Doubt also explains the other two kinds of Doubt referred to by the words (b) andkadharmopapatteh', 'arising from the cognition of characters that serve to distinguish an object from diverse objects', and c) 'vipratipat'eh', 'from the presence of contradictory opinions.' "What do you mean by this application of one explanation to several cases?' What we mean is that just as

in the case of the first word ('samānadhar-Vår. P. 95. mopapa([?, we took the definition of Doubt to consist in the three words ('samānadharmopapați?h, upalabdhyanupalabdhyavyazasthūjah and vish-ēsāpē ksah'), and rejected the view that the definition consists of either each one of the three terms or of any two of the three terms---so also in the case of the two terms that appear (in the Sūtra) after the first word [each of the two terms should be taken as a distinct definition, along with the words 'upalabdhyanu. palabdhyavyavasthātah and viskēsāpēksah'].

[B] 'Anēka@harmopapa!!? samshayah', 'Doubt (of the second kind) arises from the cognition of characters that serve to distinguish an object from diverse objects',—says the Sufra. [On this, the Bhāşya, p. 34, L. 10,—"The word 'diverse' denotes all those things that are homogeneous and heterogeneous to the thing in question; and Poubt arises from the cognition of characters that distinguish the thing from, or exclude, those diverse objects.' With a view to grasp the

<sup>•</sup>The man in Doubt is as uncertain as to the real character of the thing before him as the man who is asleep,

meaning of this passage, the Author puts forward and oriticises the explanation proposed by some *Ekadëshins*].— Some people have proposed the following interpretation:— "The compound 'anëkadhurma' should be taken as 'anëkasya dharmah', 'the character of diverse objects', and also as 'anëkah-dharmah', 'diverse characters'. For instance, the character of being produced by conjunction is 'anëkasya dharmah', as it is a character belonging to such diverse things as Substance, Quality and Action; and as 'anëkah dharmah', 'diverse characters', we have such characters as being produced by conjunction, being without qualities, and being without action; and both these kinds of characters subsist in Sound; so that from the cognition of such characters (as substance, a Quality, or an Action)."

This interpretation is not right; as the Doubt arising in this manner would be included under that which has been defined as 'arising from the cognition of common characters'. That is to say, the one character that subsists in diverse things, as well as the diverse characters that subsist in any one thing, are both included under the 'common characters' mentioned in the clause 'from the cognition of common characters'; so that the Doubt arising from the cognition of such characters would be included under this first clause "; and no special purpose would be served by the mention of the second word 'anëkādharmopapat{?ëh.'

\*Sound is produced by conjunction ; and being produced by conjunction it subsists in all transient substances, as also in such qualities as Celour and the rest ; so that this quality, which has been cited as an example of 'antkasya (harmah', is only 'samdnadharmah', a character common to several things. Of the 'diverse qualities ' antkah dharmah' mentioned, being produced by conjunction subsists in Substances Qualities and Actions ; being without qualities subsists in Qualities and Actions, being without action also subsists in Qualities and Actions ; so these also are 'common characters'; and it is only because these are common to a number of things—i. e. they are samdnadharma—that they give rise to Dou'st. And this Doubt falls under the first category, 'that which arises from the cognition of common characters.'- Téiparya. "What then is the true meaning of the expression anekudharmah'.

(1) The true meaning is the specific character, the character peculiar to, belonging exclusively to, the thing concerned. "How can the compound word 'anëkadharmah' denote the specific character?" For the simple reason that the specific character serves the purpose of differentiating the thing from homogeneous and heterogeneous things. The word 'anëka', 'diverse', stands for the homogeneous and heterogeneous things; and it is from these that the said character differentiates the thing ; the compound 'anëkadharmah' being interpreted either as 'anëkasmāt vishēşuh', 'differentiating from diverse things', or (as the Bhāşya interprets it) 'fasya anëkasya dharmah', (the character which belongs, by serving to exclude them, to each of the diverse things.')

(2)  $\dagger$ Or, 'angkadharmah' may be explained as ' that character which is the cause or basis of the notion of oneness and diversity of the thing '; that is to say, that from which arises the notion ' this is the same, that is different '; of the notion of 'this is the same,' the basis consists in nondifference; while that of the notion of diversity, the basis consists in difference, — *i. e.*, that character which distinguisles one thing from another. As an example of such 'anēkadharma' we have the character of being produce *i* by disjunction, as subsisting in Sound [the said character being the basis of the notion of one-ness or sameness, with the said Sound, which we have with regard to all Sounds produced by disjunction ; and being also the basis of the notion of diversity or difference from the said Sound which we have with regard to Sounds other than

Downloaded from https://www.holybooks.com

<sup>&</sup>lt;sup>e</sup>This answer is in accordance with the *Bhd;ya*. Another explanation is given below. Test, line 13.

<sup>† &#</sup>x27;Anikam'-ikafiches anikafiches; and the character which forms the basis of these two, --i.e. of the thing being different from one and non-different from another thing --is called 'anikagkarma'.

those produced by disjunction.] And this character of being produced by disjunction as subsisting in Sound,—which is already distinguished from Community, Individuality and Inference by reason of such characters as being endowed with the community of 'being' and so forth (which can never belong to Community, Individuality and Inherence) gives rise to the Doubt as to that Sound being a Substance, a Quality or an Action; as neither of these latter—Substance, Quality or Action—is ever found to be produced by disjunction; so that the character of being produced by disjunction, not being found anywhere except in Sound,—and as such serving to distinguish or exclude Sound from everything else (in the shape of Substance &c.)—gives rise to the said Doubt.\*

"But disjunction itself is something produced by dis junction [one disjunction being produced by another], and disjunction is a Quality [so that, the character of being produced by disjunction, when found to subsist in Sound, should be the basis of the well-ascertained cognition that 'Sound is a Quality', and not to the Doubt as to whether it is a Substance, a Quality, or an Action]" True; but the said character (of being produced by disjunction) gives rise to Doubt only in the mind of the man who does not admit of disjunction

<sup>•</sup>Sound is possessed of the community of 'being'; according to the Logician no community can subsist in Community, Individuality or Inherence. So that by the presence of the community of 'being' Sound is distinguished from Community Individuality and Inherence. Substance, Quality and Action are possessed of the community of 'being', in common with Sound ; but Sound has the character of being produced by disjunction, which is not found in Substance, Quality and Action. So that the said character not being present in any of these three, the absence of it is common to all; so that there arises the Doubt in the following form—'Sound, which is non-different from Substance, &c., because possessed of the character of Being, is it a Substance, being distinguished from Quality and Action by the character of being produced by disjunction, which is not present in these two? or is it a Quality, being distinguished as before from Substance and Action ? Or is it an Action, being distinguished as before from Substance and Quality ? Here the said character brings to mind Substance, &c., not because it subsists in them, but because it is absent from them; and hence it is regarded as a specific character of Sound.

being produced by disjunction; while in the mind of one who admits of such disjunction, it does give rise to the certain cognition; — the reasoning in his mind being that 'Sound is a Quality, because it is produced by disjunction, like the disjunction that is produced by disjunction'. And in order to meet this latter case (of the man who admits of disjunction) we say that what forms the basis of the said Doubt in regard to Sound is its character of having *disjunction produced by disjunction* for its immuterial cause; as cer-

Vār. P. 36. tainly this last character subsists in Sound only; as it is Sound alone that is produced by

disjunction; so that what is meant by the assertion that 'the character of being produced by disjunction is the cause of Doubt' is that Doubt is produced by the character of being produced by such disjunction as is produced by disjunction; and certainly this character never subsists apart from Sound; so that serving to exclude Sound from all other things, it becames a source of Doubt, with reference to things that are homogeneous to Sound, as well as those that are heterogeneous to it; as a specific character is actually found to serve both purposes (*i. e.* of distinguishing a thing from homogeneous as well as from heterogeneous things). †

 As a matter of fact it is only the Vaishēşika that admits of disjunction being produced by disjunction.

† When a piece of bamboo is cleft open with force there is a cracking sound produced; and it is produced by the disjunction or separation between the two pieces of the bamboo; and also by the disjunction of the fibres from the äkäsha enclosed between them, the former disjunction being the efficient, and the latter the nonmaterial cause. So that the Sound has for its non-material cause the disjunction of the fibres from the enclosed äkäsha; and this disjunction is itself produced by the disjunction between the two fibres themselves.—*Tdiparya*.

The Parlshuddhi is not satisfied with all this. "Notwithstanding all that the Vartika says, there is, as a matter of fact, no flaw in the reasoning where the charsoter of being produced by disjunction is made the basis for regarding Sound as a Quality; no Substance or Action is ever found to be produced by Disjunction. For if the Disjunction subsists in things that do not form the constituent factors of the (3) [Another interpretation of the expression andkadharmak' is suggested]—Inasmuch as the 'samānadharma' 'common character', has already been mentioned (as a cause of Doubt), the word 'andkadharms' must be taken to mean its contrary, the asāmāna, or specific, dharma or character. Or, out of the two well-known causes of Doubt,—i. e. out of 'common character' and 'specific character',—the first is already mentioned by the first term of in the Sāļrā, 'samānadharmaķ'; so that what remains to be mentioned is the second cause, the 'asamānadharmaķ'; hence it must be this that is mentioned by means of the term 'anākadharma.' "Why then does the Sāļra not use the expression samānāsamā nadharmahapa{{eh ?"

It would not be right, to use such an expression; -(1)because in that case, we could not get at the sense of the choracter being excluded from diverse objects funekasmad vyavrittak dharmah, which can be got at only if we have the expression anëkadharma];-(2) the use of the expression in the sutra may be said to be due to a desire for simplicity or brevity: the Sūtra has used the expression 'samānānēkadharma' instead of 'samānāsamānadharmu', as it contains one letter less than "Well, if the expression 'anekadharma' this latter. means only asadharana dharma, specific character,-and if it is this specific character of a thing that is the cause of Doubt with regard to it,-then Doubt should arise from such a reasoning as this: 'the living body is not without soul. as if it were so, it would be without breathing &c.,' fas the character of being endowed with breathing &c., is one that

Substance, then it is not a cause at all of that Substance; and if it does subsist in the constituent particles of the Substance, then it only serves to destroy the conjunction or cohesion among these particles; and thereby forms the cause of the destruction of the Substance. Of Action also Disjunction can never be the cause. So that the character of being produced by Disjunction can belong to Quality only. And so the said character cannot in any case give rise to the said Doubt And yet the Vārțika and the Tāț pays have made an attempt to find an explanation simply with a view to justify the Bhāşya in the selection of its example."

is peculiar to, belongs specifically to, the living body only.] [and yet this is a reasoning the Logician has employed to prove with certainty the presence of Soul in the body.]"\*

This objection does not affect our position at all : for in the case of the ' common character ' also, because a certain ' common character' gives rise to Doubt it does not follow that Doubt would arise even when that 'common character' is one that is common to all things; fort there is no failure in the universality of the character which is common to all things :--- similarly in the case of the character which is not present in things (other than the one in question), even though the character may be ' peculiar ' to that thing, what determines whether it will bring about Doubt or certainty is the failure or otherwise (of the universality of the absence of the character in . other things); so that when there is failure of this, the character becomes a source of Doubt, and when there is no failure in this, the character brings about a well-ascertained Cognition. "Well, if in the case of both (the common character and the specific character) the fact of their being the source of Doubt rests upon their failure (of the universality of their presence and absence respectively) then both would be included in the single word 'samānadharmopapattēh'; so that being included in the first, the second source of Doubt should not have been mentioned apart by itself." It is

• This objection is based on the notion that what makes the specific character the cause of Doubt is the fact of its exclusion from a number of things.—*Tāţparya*.

+ From what follows the correct reading appears to be 'Anvayāvyabhichārāt.'

‡ The Chaukhambha series edition reads this sentence thus-

# व्यातिरेकियोऽपि बस्यवाधारवत्वे विपर्यवयव्यव्यव्याव्यणिवाराष्ट् देव्रणाव इति । तत्मात नेकहत्तित्यपनेकपृत्तित्वं पंत्रवकारवयुनिर्ववद्वेत्रये वादेतुः क्रिन्तर्दि वापारवावापा-रवत्वे वति ग्यणिपाराव्यणिपारो राज्यनिर्ववद्वेत् ।

But the reading of the Bibliotheca Indica Edition gives better sense.

§ The 'fallibility' or 'failure' of the Probans of a reasoning consists in its subsisting in both the sapakes and the vipakes; in which case it is 'common'; so that if 'fallibility' is the sole basis of Doubt, all sources of Doubt should be included under 'that which arises from the cognition of common characters." true that there is no other cause of Doubt save 'failure'; but there is this difference between the two forms of Doubt mentioned in the Sūţra, that, though in both cases there is failure,' yet in one case there is failure of what is adirmed; while in the other case there is failure of what is denied, that is to say, the expression 'arising from the perception of common characters' indicates the 'failure' of what is affirmed; while the mention of the specific character of being produced by disjunction indicates the 'failure' of what is denied; and it is on the basis of this difference that the two have been mentioned separately.\*

(4) [Having put forward his own view, the Author of the Vārțika puts forward another interpretation, with a view to showing its incongruity]—Some people have explained the word 'anēkadharmopapațțeh' in the following manner:—" The negative particlo signifies preclusion; so that the word 'anēkadharma means the presence of two such characters as are not fallible or deficient; that is, 'anēka' is that which is other than 'one'; so that the word 'anēkadharmah' must signify the presence of two such infallible characters as are mutually contradictory; a reasoning where this condition is present has been called 'prațițarka', 'counter-reasoning'; and this

is a source of doubt; e. g. the two characters of *being audible* and *being a product* as subsisting in Sound (give rise to the doubt as to Sound being eternal or non-eternal).<sup>+</sup>"

† In regard to Sound we have the two reasonings -- 'Sound is eternal because it is audible, like the genus shabdatea '; and 'Sound is non-eternal becaus it is a product.' Here 'being andible ' is just as infallible in proving eternality as 'being a product ' is in proving non-eternality ; they are mutually contradictory, as leading to contradictory conclusions, so they are the source of the Doubt as to whether Sound is eternal or non-eternal.

<sup>•</sup> It is true that in both cases, there is 'common factor;' but in the first case, what is common is the *presence* of the character in question, while in the second case it is the *absence* of the character that is common.

This interpretation is not right; as what is here put forward is impossible; as a matter of fact, it is not possible for any two really infallible characters, which are mutually contradictory, to subsist in any one thing; for the simple reason that any one thing cannot have two forms ; and if two mutually contradictory characters were really infullible (true), then the single thing (to which they belong) would come to have two forms; such however is never found to be the case: so it must be admitted that both the characters are not infallible Further, the counter-reasoning that has been or true. put forward (as affording the analogy for the subsisting of contradictory characters in a single thing) is not quito right. For, in the first place, if the man putting forward the counter-reasoning were to say 'this counter-reasoning of mine is just as valid and infallible as the previous reasoning',-then this would be scarcely right; as under the law that 'things are named according as they are generally known', when he calls the previous reasoning a 'reasoning'. that reasoning becomes known and recognised as a true reasoning beforehand (i. e. before the counter-reasoning); so that there can be no proper occasion for the putting forward of the counter-reasoning, being, as it is, annulled and precluded by the fact of the recognition of its contradictory (by means of the previous reasoning);-secondly, if the counter-reasoner were to accompany his reasoning with the remark 'the previous reasoning is as impossible and invalid as the counter-reasoning that I have put forward',--even so the inconclusiveness and invalidity of the counter-reasoning becomes admitted by the man himself. And further, the very fact that it is possible for the two characters put forward as 'mutually contradictory' (e.g., the characters of being audible and being a product) to co-exist in the same thing shows that they are not really contradictory. For what does 'contradictory' mean? (a) Does it mean that the two characters cannot co-oxist P b) or that they indicate con-

tradictory facts ? (c) or does it consist in the specific forms (of the characters)? (a) If it means the impossibility of coexistence, then there is no such 'contradiction' in the case in question ; as the two characters are actually found to co-exist ex-hypothesi. (b) If 'contradiction' is held to consist in the indicating of contradictory facts, this also will not be right; for (we have already pointed out) that it is not possible for anything to have two forms; if the two characters were really indicative of contradictory facts, then a single thing would have two forms (which is impossible). (c) Lastly, if it is the specific forms of the characters that constitute 'contradiction', then there is no annulment of anything at all; for the character of being a product is not the same (has not the seme specific form) as that of being audible-nor is being audible the same as being a product [so that, when it is only the specific form of each character that constitutes ' contradiction', there could be real 'contradiction' only if both had the same specific forms]. And thus in this case no Doubt would arise at all.<sup>•</sup> [The interpretation has been found impossible, as there is no real 'contradiction' in the cuse but]-Even granting (for the sake of argument) that there is 'contradiction',---if by reason of the presence of the two contradictory characters of being audible and being a product. a doubt really arises in regard to Sound being eternal or non-eternal),-as this Doubt will have arisen from the cognition † of the particular characters (of Sound, i. e. being audible and heing a product), by the cognition of what would that Doubt be removed? As when the particular characters of a thing have been already cognised, there can be no 'want' or desire to find out its character ;---as it is only when the mere generic form of a thing has been cognised that there arises a desire

<sup>•</sup> As the Doubt is produced only by reason of the two characters subsisting in the same thing, Sound, and indicating contradictory facts with regard to it, the mere fact of the two characters being different does not give rise to Doubt.

<sup>+</sup> The Chaukhambha Series edition reads 'vishigddarstand; but the reading 'vishigadarshand;' gives better sense and is adopted by the Tilparya.

to find out its particular characters. The Opponentanswers-

of two Inferences, will be removed by Per-Vär. P. 98. ception." This is not right: as the matter in question is not amenable to Perception; whether Sound is eternal or not-eternal can never be known by means of Senseperception. "Well, the Doubt could be removed by means of Word." This also is not possible; as it is the exact nature of Word itself that is under consideration : whether Sound is eternal or not-eternal is a question that has been raised with special reference to Word ; | so that no Word could rightly settle that question]. Thus then, it is found that the matter is not amenable to either Perception or Word ; and on account of the two contradictory Inferences that have been put forward, it is clear that the Doubt cannot be removed by Inference; so that the Doubt becomes one that cannot be removed at all. "Let it be one that cannot be removed' what harm does it do ?" Why ? It certainly does this harm that no such Inference could bring about a definite cognition with regard to other things also; e. g., no definite cognition would be afforded by such a reasoning as 'apprehension is noneternal because it is a product'; for though the character of being a product has been found in Sound, yet it is still doubtful whether Sound is eternal or non-eternal; so that that character of being a product, which has been found in Sound, would, in the case of other things also, be a source of Doubt (and not of a definite well-ascertained cognition of noneternality); and the result of this would be that no Inference could prove non-eternality [as every reasoning put forward in support of non-eternality is based upon what is only a form of being a product]; and thus your argument strikes at the root of all Inference; \* and certainly an argument

<sup>•</sup> The inference of non-eternality from the character of being a product is quite valid; and yet if it brings about only Doubt, and no certain cognition, then the same would be the case with all valid Inferences !

that annuls all Inference should never be put forward by one who is well-versed in the science of reasoning!

In answer to the above the Bauddha retorts-"As there is nothing eternal for us, the reasoning does not annul anything for us; for one who holds some things to be eternal, the reasoning put forward presents the undesirable contingency of the concomitance of contradictions (eternality and noneternality); for us however nothing is eternal [so that the reasoning does not give rise to any such undesirable This is not right; you apparently do not contingency]." understand what is meant by 'annulment'; you have not studied' the subject of 'annulment' at all. When you assert that there is nothing 'eternal' for you, you simply urge an objection to the particular argument of your Opponent (which is in reference to eternality or non-eternality); as for the undesirable contingency of the concomitance of contradictions, in your own philosophy also there is ample room for such contingencies for instance, your philosophy admits of such contradictory inferences as-(1) ' Idea \*obstructs the production of anything at the point of space occupied by itself. because it is an entity, like Colour,' and (2) 'Idea does not obstruct the production of other things at the point of space occupied by itself, because it has no colour, like cognition': and here as we find the combination of two mutually contradictory and true characters, it cannot be definitely ascertained whether idea is an obstructor or it is not so. Thus then we conclude that it is not right to assert that 'there is doubt with regard to Sound being eternal or non-eternal, because of the co-existence in it of two mutually contradictory characters.

Then again [if the perception of such characters were really a source of Doubt], in view of the fact that the two characters (of *being audible* and *being a product*) are constantly present in Sound, it would be impossible to make any such

<sup>• &#</sup>x27;Saprațighum' means 'Svafishë parofpațțiprațibandhakafvam,' and according to the Saufränțikas Colour is corporeal and as such Saparfigha—Täiparya.

assertion as has been put forward. \* That is to say, as a matter of fact, Sound is never entirely found to be without the said two characters; it is always endowed with them; it is always a product and always audible; so that no Vār. P. 99.

such assertion could be made as that ' Sound is eternal,' or that 'Sound is non-eternal,' [and this would be absurd]. Similarly, as regards the case of the Man and the Post, even if the observer were to perceive the characters of the Man and the Post, no such definite assertion would be possible as that 'it is a man', or that 'it is a post' [and this would be absurd]. "Well, no such assertion will be possible-what then ?" What ycu say is contrary to facts : as a matter of fact, you do make the assertion that 'Sound is eternal', and I also make the assertion that 'Sound is non-eternal': so that how can it be said that no such assertions are made?

Thus then we find that the more we examine the interpretation of the Sutra whereby the combination of two contradictory properties is made a cause of Doubt, the more do we find it contrary to reason. So we desist from further criticism of that interpretation.

With a view to avoid the above difficulties, if it be urged that what is meant to be the cause of the said Doubt in regard to Sound are the two characters, of being a product and being audible, taken together (and not each individu ally),---then, in that case, the case of the two taken together leading to the said doubt does not in any way differ from that of the character of being produced by Disjunction giving rise to the same Doubt: just as the character of being produced by Disjunction gives rise to the Doubt with regard to Sound, because it is a character peculiar to Sound and does not subsist in any other thing, in the same manner the

324

<sup>\*</sup> Shabdah anitya ora ifi, shaddah nifya ora iti va abhilapah na sambharati-Tājparya.

two characters, of being a product and being audible, when taken together, constitute, in their combined form, a character that is peculiar to Sound, and which does not subsist in anything else, and as such gives rise to the Doubt.<sup>•</sup> And thus this also is only an instance of Doubt being caused by a 'specific character', and not of one due to another kind of character; so that this case of Doubt is already included in the one cited by us [under the Doubt caused by the cognition of specific character; and hence there was no need of dealing with it separately, and of propounding a different interpretation of the Sutra for the sake of this Doubt].

Thus then we conclude that the expression 'anëkadharmah' should not be interpreted as ëkasmāt anyah dharmah, the character other than the one [but as anëkasmāt vishēşakah dharmah, as explained by us above, Test, p. 95, L. 11].

A fresh question is started-"When an observer notices such two characters (as audibility and being a product) in a single thing (Sound), what is he to understand with regard to that thing P What idea can he form of it ?" What he should do is to ponder over and ascertain the comparative strength of the two characters; that is, as a matter of fact both of the characters (on account of their being mutually contradictory as leading to contradictory conclusions) cannot be the means of affording any correct cognition: so that the observer has to make an effort to astertain the comparative merits of the two, as to which one of the two is actually a means of bringing about a right cognition, and which one is not so; and (in the particular case of Sound) when such an effort is made it is found that what is actually capable of leading to a correct cognition is that character which is one of those that go to indicate the "How do you know that?" non-sternality of Sound.

Nothing except Sound is both a product and audible.

For the simple reason that the *elernality* of Sound is opposed to well-ascertained proofs, as we shall show later on.

From all this, we conclude that the second form of Doubt mentioned in the Sūtra is that which arises from the cognition of 'anekadharma,' i. e. of the specific character of a thing.

[O] The third kind of Doubt arises from vipralipalli, says the S2 fra. The word 'vipralipalli' signifies contradictory opinions, i. e., statements" that contradict one another. So that the third kind of Doubt is that which arises when one finds,—(a) that there are contradictory statements with regard to the thing in question,—(b) that there is no certainty attaching to its perception and nonperception;—and (c) when there is a remembrance of the specific character of the thing.

The Bhāşya (P. 35, L. 13-14) says :--[In the first two kinds of Doubi] the 'common properties' and the 'properties distinguishing the thing from diverse objects' are such as subsist in the object cognised, while [in the fourth kind] the 'perception and non-perception' subsist in the cogniser. As against this, we have already stated above [Text, P. 93, Ll, 12-13 Vir. P. 100. et seq.] that the 'perception' and 'nonperception' cannot independently by themselves, give rise to Doubt.† Then again, we do not quite understand the assertion that 'the common properties and the properties distinguishing the thing from diverse objects subsist in the object cognised.' For is it the property

+It has been shown that the 'uncertainty attaching to perception and nonperception' can give rise to Doubt only when accompanying the cognition of 'common characters' &c.

<sup>•</sup>It is not enough that different opinions are entertained with regard to the thing; as it is possible that there may be many opinions; but they may not be known to the observer. So what is necessary is that there should be a statement of the opinions, so that the man may become apprised of them.—Ta(parys.

Ľ

that gives rise to the Doubt? Or the cognition (of the proper. ty)? It has been again and again shown that the property. cannot give rise to the Doubt; what gives rise to the Doubt is the cognition of ' the common properties, and of the properties that distinguish the thing from diverse objects'; and certainly this cognition subsists in the cogniser; so that there is no difference (between the first two causes of Doubt, and the 'uncertainty attaching to the perceptions and non-perceptions'). The reason why the 'common properties' and the ' properties that distinguish the thing from other objects'. have been mentioned separately, we have already explained above :---namely, that there is this difference between the two sets of properties, that while the former are affirmed of the thing in question as also of the other things, the latter are only denied of the other things. And when we speak of Doubt. arising from difference of opinion, this difference of opinions subsists in the persons making the statements of the opinions. and the Doubt arises in the mind of the person who hears these contradictory statements; and this Doubt is in the form - which of these persons has the right knowledge, and which only the wrong oue.' And it is for this reason, that the three causes of Doubt have been mentioned separately.

\* Au objection is raised :---

"All that is mentioned in the Sutra is 'common character'; Every one of the three factors—' the cognition of common characters,' 'the cognition of the specific character' and the 'cognition of contradictory opinions'—is implied in the expression ' common character'. Thus then, the mention of the latter two factors—'specific character' and 'contradictory opinions'—being futile, there is no use mentioning them. Hence the Sutra should appear in the form—' samānaghar-

<sup>&</sup>lt;sup>9</sup> Specific character' also can be spoken of as ' common ', inasmuch as ' being specific' is a character that can be said to be 'common' to all specific characters. Similarly, 'being contradictory ' is 'common' to all contradictory opinions, So that both of them are included under ' common character' -Tdt arys.

mopapa [[ë], vishes apëkaak samshayah', 'Doubt is the wavering judgment arising from the cognition of common character, in which the definite cognition of the specific character of any one object is wanting."

This is not right; it is clear that the objector does not know the meaning of the Sūtra. The objection has been brought forward, without understanding the meaning of the Sūtra. We have already explained in what way there is a difference between the three factors of ' common character', 'specific character' and ' contradictory opinions.'\*

Some people (among whom is the author of the Bhāşya itself) take the words, of the Sūțra to mean that there are five kinds of Doubt ; they construe the Sūtra as - ' Doubt is that wavering judgment, in which the cognition of the specific character of any one object is wanting, and which arises from the cognition of common characters '; and so on also with each of the remaining terms. But this interpretation is not right; as the expression 'on account of the uncertainty attaching to perceptions and non-perceptions' should qualify each of of the preceding expressions; the meaning of the Sūtrabeing-Doubt is the wavering judgment which is wanting in the cognition of the specific character of any one object, which arises, when there is cognition of common characters of things and when there is uncertainty attaching to what is perceived and what is not perceived '; similarly, ' which arises from the cognition of specific character, &c., and ' which arises from contradictory opinions, &c., &c., [in every one of these the 'uncertainty attaching to perceptions and non-perceptions' being a necessity]; so that ' the uncertainty attaching to per-

<sup>&</sup>quot;We do not deny that everyone of these may be regarded as 'common' in some way. They may all be similar, so far; but what we lay stress upon, and what is more pertinent to the subject under consideration, is the fact that each of these three has its own distinctive feature; i. e. the 'common character' is present in both; the 'gpecific character' is not present in any thing at all except one thing; and the 'contradiotory opinions' are expressed by two opposite parties.

Downloaded from https://www.holybooks.com

ceptions and non-perceptions 'cannot be regarded as a distinct cause of Doubt, and this is what the *Bhāṣya* has done]. Then again, it will not be right to hold that 'Doubt arises from the fact of all Perceptions and Non-perceptions being of two kinds (*i. e.*, right and wrong)'\*; for this would be against ordinary experience: one who holds that 'Doubt arises, because Perceptions and Non-perceptions are of two kinds' contradicts facts of

ordinary experience. "How so?" For the simple reason, that if Doubt arose in that way, there could be doubt in regard to everything that a man would perceive. "Why?" Well, because in every case what is perceived is of two kinds (real or unreal); so that, if Doubt were to arise, because Perception is of two kinds, how could this Doubt be removed? "The Doubt would be removed by the subsequent perception of particular features."

But with regard to these particular features also, so long as any such feature would be perceived, every one of these perceptions being, *ex hypothesi*, of two kinds, there vould always arise a Doubt in the form—' these particular features that I perceive, are they real or unreal?'; so that there would be no end to any Doubt at all.

The same arguments may be urged against the view that Doubt arises from the fact of non-perceptions being of two kinds. Further (if Doubt were to arise in this manner) there would be no possibility of a man being free from fear and suspicion; for instance, when on entering a room, even though he may not † see a serpent there [inasmuch as this non-perception is of two kinds, right and wrong], there would be the doubt in the form—' Does the house contain a serpent or not '?—And this Doubt also could never be removed; so that there would

<sup>&</sup>lt;sup>e</sup>This is what is meant by ' the uncertainty attaching to Perceptions and Nonperceptions'.

<sup>†</sup> The sense demands a 'na' jhere. Without the **A** also the passage gives the the same sense ; but the 'na ' makes it clearer.

be no freedom from fear and suspicion with regard to any place Further, those who take the Sūtra to mean that at all. there are five kinds of Doubt should explain whether this proposed difference is due to a difference in the causes giving rise to Doubt, or to a difference in the nature of the Doubts themselves. If the difference be held to be due to difference in the causes, then there would be not only five, but many kinds of Doubt [as the causes of Doubt are endless, each Doubt having a distinct cause, and the number of Doubts being endless]. If, on the other hand, the 'difference be said to be due to difference in the nature of the Doubts, then there is no difference in the nature of the Doubt. every Doubt as such is of one and the same nature, which consists in its being Samshiti, doubling. All this goes to prove that the Sutra does not mean that Doubt is of five kinds.

An objection is raised against the Sutra:--- "As a matter of fact, Doubt pertains to the object ; and as such it cannot arise from the perception of common properties. When the Sutra asserts that 'Doubt arises from the cognition of common properties,' it does not make a right assertion; because Doubt arises with regard to the object possessing the properties (and not with regard to the properties themselves); it is not right to say that Doubt arises in regard to the object, when what is cognised is the common property, for the simple reason that the object possessing the property is entirely different from the property; certainly Doubt does not arise with regard to the horse when what is perceived is the cow. Then again, there being no perception of the object at the time (when the property is perceived), if the Doubt be said to arise with regard to it, this would be a direct contradiction of the declaration of the Bhūşya, (P. 8, L. 8,) to the effect that ' there can be no Doubt with regard to what is not perceived or with regard to what is definitely cognised,"

**330** ·

The answer given to the above objection by some people is that, inasmuch as the *property* perceived belongs to the particular object, it is only natural that it should give rise to Doubt with regard to that object. What this answer means is that the perception of the common property gives rise to Doubt with regard to the object to which the property belongs, for the simple reason that the property belongs to that particular object; and the perception of the cow cannot give rise to Doubt with regard to the horse, because the cow is not a property belonging to the horse.

This answer is not satisfactory; as the difference between the *property* and the *object* still remains; the fact that the property belongs to the object does not do away with the difference between the two. If the relation of *Property and Object* were accepted as determining Doubt,

Vår. P. 102.

then this would be contrary to what has been said under Sütra 10, above (See Text, p. 67,

"How so!" That Sūtra having been 1. 8, &c. &c). taken to mean that, inasmuch as there is a fusion or congregation of Desire, Aversion, &c., these come to indicate the presence of Soul (wherein they all congregate),-the Opponent comes forward with the assertion that the said fusion is due to the causal relation; and is met with the argument that the causal relation does not do away with the difference (among Desire and the rest). This is what has been done by us there; while here when you assert that Doubt is due to the fact that the Property belongs to the Object. what you mean must be that what determines the Doubt is the difference as qualified by the particular relationship between the property perceived and the object to which it belongs; and if this were right then the Opponent (who has been met on p. 67) could also retort, with equal reasonableness, that the causal relation would be the determining factor (in the said 'fusion' of Desire, &c.). For these reasons

we conclude that it is not right to explain the Sütra to mean that Doubt arises from the fact of the Property belonging to that object.

"Well then, what explanation have you to give of the assertion in the Sütra that Doubt arises with regard to the Object when what is perceived is the Property, and not that Object."

The right explanation is as follows:—The compound 'samānadharma' is to be taken as a Bahuwrāhi compound, and as such denoting the object; when the compound is taken as Bahuwrāhi, it denotes the object "How so? 'Samānadharma' is that which has the samāna dharma, samānahdharmah yasyı—, i. e. the object possessed of the common character; and the upupali or cognition of this is 'samānadharmopapaii'; so that the expression 'samānadharmonapailāh' means that [D ubt arises] from the cognition of the object possessed of common properties.

The Sūtra says—Doubt is that wavering judgment which is vishēsāpēksa. Here the word 'vishēsīpēksah' stands for 'vishēsasmrity pēksah', which means that there should be a remembrance of the specific character (in addition to the non-perception of such character).

"What specific character is the object of this 'remembrance'? Is the remembrance of the specific character of that object with regard to which there is Doubt? or is it some other specific character? That is to say, does the observer remember the specific character of that object in which he perceives only common characters, and with regard to which he has the Doubt? or does he remember the specific character of something else? If you mean the former, then what you say is not right; as the specific characters of that thing have never been perceived; as a matter of fact, one can remember the specific characters of that thing whose such characters have been previously perceived; as in this case the characters would be those already cognised (and as such capable of being remembered); but when the thing is one whose specific characters have not been previously apprehended, and with regard to which Doubt arises by reason of only its common characters being: [apprehended, — how can there be any 'remembrance of the specific characters? As no such specific characters of it have been previously cognised."

The above objection is futile; as the phrase 'remembrance of specific characters' is used in a general sense; the word 'visheadpeksuh' is used in its vague general sense; and it does not\* signify anything definite as Var. P. 103. to the remembrance pertaining to the specific characters of that object or to those of something else: [it is both; for instance] when the specific characters to be remembered are those that belong to a thing previously known, then the 'remembrance of specific characters' pertains to the previously cognised characters; while when the Doubt arises with regard to a thing not previously cognised [but ressembling some other thing that is so cognised], the desired remembrance pertains to the specific characters of the other thing that has been previously cognised,-this remembrance being due to similarity (of the two things).+

Thus it is established that there are only three kinds of Doubt.

The definition of Doubt provided by the Saira includes all those definitions propounded by other philosophers,

<sup>•</sup> The sense demards a 'na' here ; the sense being that it cannot be definitely said whether it is one way or the other ; as sometimes it is one and sometimes the other.

<sup>+</sup> When the Doubt pertains to a thing already known, its characters also are known; so that their remembrance is not impossible. When however the Doubt pertains to a thing never known before, but ressembling something known,—in this case also the specific characters of the known thing are recalled to the mind through similarity.

which are not incompatible with it. B. g, the definition given by Kanāda (Vaishēşika-sūfrā, 2, 2, 17) that Doubt arises when there is 'sāmānuapratuaksa', 'vishēsāpratuaksa' and 'vishEsasmrifi'.-the meaning of these words is as follows :--(1) samanyapratyaksa means the perception of an object possessed of 'sāmānya' or common characters; and it does not mean 'the perception of common characters ';--(2) vishesapralyaksa means that the specific characters of the thing are not definitely recognised ;-(3) the word vish Zeasmrili means exactly what it means in our Salra. "But in what way does the Vaishesika-sufra quoted include the 'specific character' (which the Nyāya-Sūţra mentions as one of the causes of The 'specific character' is also included in the Doubt)?" Sutra, as this also is 'fallible' or 'inconclusive' in determining the character of a thing; the 'common character' is regarded as a source of Doubt because it is inconclusive in determining the exact character of a thing; and as the 'specific character' also is equally inconclusive, this also is implied by the mention of the 'common charac-"If that is so (i. e. if the 'specific character' ter '). is implied in the 'common character'), then the next word in the Nyāya-Sāļra-' anēkadharmopapaļļēh'-shorld not be there, being superfluous." The two have been mentioned separately,\* not by way of enumerating the several distinct causes of Doubt, but because of the fact that while one (i. e. the common character) becomes a source of doubt by its presence in several things, the other (i. e. the specific character) gives rise to Doubt by its absence. Some people have urged the following objection against the Vaishesika-Sulra :- "The using of the two words visheedpratyakeat and visheeasmrifet forms a needless repetition : the mere statement that 'Doubt arises from the perception of common characters and the remembrance of specific characters' would imply that there is 'non-percep-

"The sense demands a 'na ' hore.

tion of the specific character'; for when there is perception of the specific characters there is no remembrance of them." This reasoning is not right; it shows that the objector does not understand the meaning of the Sūtra: The Sūtra does not mean that there is non-perception of the specific character; what is meant by vishesāpratyaksa (non-perception of the specific characters) is that no specific characters are definitely recognised as subsisting in any one particular object. Thus then there is no fault of 'repetition', or 'redundancy' in the Sūtra.

Other people (the Bauddhas) explain the nature of Doubt in a different manner :--- " Doubt, "according to them. "is that wavering judgment which arises from the perception of similarities by one who is desirous of apprehending the specific character of the thing." \* It behoves these people to explain what it is with regard to which there is Doubt, when the similarity is already duly ascertained. "It is the thing possessed of the characters that forms the object of the Doubt ;---this has been Var. P. 104. already explained." It is true this has been so explained; but the explanation is not right. "Why is the explanation not right ?" If the Bauddha admits an object (apart from its properties) then he falls into a self-contradiction.† And further, if the object and its property be held to be totally different from one another, then, in the case cited, what is seen and definitely ascertained is the property, and the object is absolutely unknown; and under the circumstances [no doubt could arise with regard to the object, as] no Doubt can arise with regard to that which is totally different from what is perceived. If (in order to escape from this difficulty) you adopt our method and show that the word

<sup>&</sup>lt;sup>o</sup>The import of this criticism is not easily intelligible—says the *Td{parya*; the Author explains it on the next page.

<sup>+</sup>According to the Bauddha there is no substance apart from the properties of colour &c.

'sādharmya', 'similarity' (in your definition) signifies the Thing [so that what is seen and definitely ascertained is the other same thing with regard to which the Doubt arises],--then our reply is that this would be scarcely right; the word sadharmya, 'similarity', denotes the character of being similar; and this being an abstract noun, it must signify a character or property, and not an object; so that the perception of one (i. e. the Property) cannot give rise to Doubt with regard to another (i. e. Object). If on the other hand, the Bauddha does not admit the difference between the Object and its Properties, in that case also, inasmuch as the Property is definitely known, ex-hypothesi,-with regard to what would the Doubt arise? [as the two being non-different. the definite cognition of the Property would mean that the Object is also definitely known, ]. Further, if the observer does not cognise the Object, whose 'specific character' would he 'desire to know' (as stated in your definition)? Certainly no 'specific characters' can belong to 'Similarity' (which is what it cognises). It could not be held that the 'specific characters' desired to be known belong to that Object which has the 'similarity' that is perceived ;--as no such Object is cognised at all, as we have already said above. As a matter of fact, when you make the assertion that-"inasmuch the specific characters cannot belong to the Similarity, they must belong to the object having that similarity '-you admit the difference among the 'similarity', the 'specific characters' and 'the object having the similarity '; nor does this assertion serve any useful purpose for you; as 'the specific characters' of the object possessing similarity will not be the same as 'the specific characters of the similarity' [so that the desire to know ' these latter would still be an impossibility]. Further, [your definition is deficient, as] even when there is ' perception of similarity', and also the ' desire to know the specific characters ', no Doubt can arise, if there is certainty

with regard to perception and non-perception (what is perceived and what is not perceived); so that it is necessary to add to your definition, the word 'upalabdhyanupslabdhyavyavas!hā!aħ,' 'there being no certainty attaching to perceptions and non-percepions,' as also the word 'anēkadharmadarshanāt,' ' from the perception of specific characters '

The Opponent starts a fresh discussion :---

"The definition of Doubt as propounded by the Sutra consists of the sentence beginning with the word, 'samānānēkadharmopapatich. With regard to this, we proceed to consider the question as to whether this sentence is meant to be an enumeration of the causes of Doubt, or a description of the nature of Doubt. If it is intended to be an enumeration of the causes of Doubt, then the statement is extremely meagre, when the causes mentioned are only those few that begin with the 'perception of common characters;' for there are many other causes apart from these; and all these others should also be enumerated; e. g. the contact between the Mind and the Soul, which is one of the causes of all Doubts arising in regard to internal things (such as calmness of mind, dispassion<sup>®</sup>, and so forth); and with regard to external things, such causes are necessary as the contact between the Mind and the Soul, and also the contact between the object and the sense-organ concerned. If, on the other hand, the Sufia be taken as a description of the exact nature of Doubt, then in that case, it is absolutely useless to mention any causes at all; it should suffice to say that 'Doubt consists in doubling (or wavering)'. • Samshitih samshayah."

Our answer to the above is that the *Satra* is intended to contain an enumeration of the causes of Doubt. "But we have already pointed out that there are many other causes besides those mentioned which should have been mentioned."

<sup>&</sup>lt;sup>•</sup>When there is a doubt, as to one's own self being free from passions, it is necessary that there should be contact between his Mind and his Soul.

Not so, we reply ; what the Safra is intended to enumerate is not

Vsr. P. 105. *all* the causes of Doubt, but only those that pertain specifically to Doubt only; so that there need be no mention of such causes as the 'contact between the object and the sense-organ ' and so forth, which pertain in common to Sense-perception also.

Or, we may also take the *Sufra* as meant to be a description of the exact nature of Doubt; the sense being that the nature of Doubt consists in this that it arises from the 'cognition of common characters &c,'

The *Doubt* as above described is dealt with in this Treatise, as it forms an integral factor in all investigations

"But like Doubt, Wrong Cognition also is a factor in all investigations; so that this latter also should have been 'men tioned in (Sūtra 1), as one of the categories." It is true that Wrong Cognition is a category; but it does not form an essential factor in all investigations; that is why it has not been "How can it be said not to be an essential factor mentioned. in investigations?" As a matter of fact, the man who is in Doubt on a certain point makes an effort to obtain more definite knowledge of it [and it is this effort that constitutes investigation); not so the man who entertains an absolutely wrong notion in regard to that point; and for this reason Wrong Cognition cannot be regarded as a part of the Science of Reasoning: that is why it has not been mentioned among the categories.

#### Prayojana-Motive.

#### Видуча.

# [Page 35, L. 16 to P. 36, L. 3].

As before, the definition proceeds in accordance with the order in which the several categories have been mentioned in the opening Sūtra.

# Sū!ra (24).

THAT OBJECT, AIMING AT WHICH ONE ACTS, is CALLED 'MOTIVE '.

An object is capable of being either acquired or rejected; and when a person determines or fixes upon an object as to be either acquired or got rid of, he has recourse to the means of acquiring or getting rid of it; and that object is called the 'motive', simply because it forms the cause of that activity of the agent.

An object is said to be 'aimed at' when there is a determination on the part of the agent with regard to it in the form, either that 'I shall acquire it', or that 'I shall get rid of it'; as it is only when an object is thus determined that it comes to be ' aimed at.'

VARTIKA ON SUTRA (24).

[P. 105, L. 8 to P. 106, L. 5].

That object aiming at which one acts is called 'Motive' says the Sūtrā. In the phrase 'aiming at which', being aimed at consists in being determined. "Determining of what?" Of the causes of pleasure and pain: when one comes to know and determine that 'this object is a cause of pleasure', he makes an effort to acquire the pleasure (afforded by that object); similarly when he comes to know that 'this object is a cause of pain', he makes an effort to get rid of the pain (caused by that object)." As a matter of fact, people are moved to activity for the obtaining of pleasure and discarding of pain; so that these two, the obtaining of pleasure and discarding of pain, constitute the 'motive.' By this definition of 'motive ' all things become included ; and it is only when

<sup>\*</sup> It is only when an object is regarded as the cause of either pleasure or pain that is gives rise to any activity on the part of the agent.

the Sūtra is thus interpreted (and *Motive* thus defined) that we can explain the activity of the man who is engaged in finding fault with the view of his opponent, and is yet unable to indicate the exact fault.<sup>\*</sup>

An objection is raised :—"You explain Prayojana, 'Motive,' as prayujya?? anena, that by which one is moved to activity; this is a well-known ordinary fact; and it does not help Reasoning in any way : so that it is not right to treat it as an integral part of Reasoning (as you have done)."

speak of what is valid and right and supported by the means of right cognition; and this would be a highly objectionable dictum indeed! If by being well-known is meant something different from being right and valid, then we fail to understand how Mative can be called 'well known' [as it is something quite right and valid and supported by the means of right cognition]. Lastly, it has been urged that Motive is not an

• And this man has recourse to the Wrangling form of discussion ; as at the time this is what brings him pleasure. The reading of the text is somewhat defective ; though it is the same in both editions. All that the Täparya says is—vifandly? api prayojanam uktam prathamasitre ; the ly undersys proverfyrm inarya ityarthak. The sentence as it stands is incomplete ; if we have the word 'sambh veafi's at the and of the sentence, after 'vyavahdrak', it gives some sense. This reading has been adopted in the translation.

The sense is that Proming &c. are just as well-known as Motive; so that if Motive should not be treated of on the ground of being well-known, Pramaga &c. also should, for the same reason, not be dealt with. integral part of Reasoning. This objection also is not well taken; because as a matter of fact, any mere purposeless Doubt never acts as an incentive to Reasoning; while a clear Motive or Purpose always forms the basis of Reasoning and investigation,—all investigation being based upon Motive.\*

DRISTANTA-EXAMPLE.

Sū(ra (25).

THAT IS 'EXAMPLE' WITH BEGARD TO WHICH BOTH

PARTIES-THE ORDINARY MAN AND THE TRAINED INVESTIGATOR-ENTERTAIN

SIMILAR IDEA8-Sũ. (25).

## Внаята.

# [P. 36, L. 6 to L. 10.]

Those men are called '*laukika*', 'ordinaty,' who are not above the capacities of an average man; *i.e.* those who are not possessed of any particular superiority of intelligence, either inherently or through hard study;—and the opposite of these are ' $p\bar{a}riksaka$ ', 'trained investigators'; so called because they are capable of carrying on the investigation of things by means of reasonings and proofs. And that object forms an 'Example' which is understood and known by the ordinary man just as it is by the trained investigator t. The purposes served by the 'Example' are:—(1) the contrary opinions are overthrown by being shown to be contradictory to, incompatible with, the Example;—(2) one's own opinions are established by being shown to be compatible with, supported by, the Example;

• This passage is somewhat obscure. The Parishuddhi says—' The sense of this passage is a follows : Though Motive, being what is accomplished by the Reasoning, cannot be regarded as its integral part, yet there can be no doubt that the statement of the Motive forms such a part ; for the simple reason that without such statement no Reasoning can proceed ; though itself without a purpose, Motive is what gives rise to Reasoning, which is fruitful and accomplishes a distinct purpose ; just as though Heaven does not accomplish any purpose, and as such does not form an integral part of the sacrifice ; yet it is what leads to the performance of the sacrifice, and as such it may be regarded as its very basis ': This interpretation is somewhat forced. The Parishuddhi has supplied another interpretation which is clearer, and has therefore been adopted in the translation.

+By the 'ordinary man' in the present context, is meant the person to whom things are explained, and by the 'trained investigator' the person who is explaining. and (8) the Example is utilised as the corroborrative Instance or Illustration, which is one of the essential factors of the inferential process.

> **VARTIKA ON SOTRA (25).** [P. 106, L. 8 to L 20].

Laukikapariksakāņām &c. -says the Sūţrā. The true definition of Example is that it is that object with regard to which similar ideas are entertained; as it is only such a definition that can include such well-known Examples as those of Akāsha and the like. If we insisted on defining the Example as that with regard to which ordinary men and trained investigators entertain similar ideas, then, such extraordinary things as Akāsha and the rest, with regard to which the 'ordinary man' has no ideas at all, could never serve as an Example. When the Sūtrā mentions the 'ordinary man' and the ' trained investigator', it is only by way of an illustration, and no stress is intended to be laid upon the similar ideas being entertained by both these two classes of men.

An objection is raised against the utility of Examples:---"Does the Example serve the purpose of indicating similarity? Or that of proving what is not proved? If it is meant to serve the purpose of indicating similarity, then it does not differ from Analogy. If, on the other hand, it is meant to serve the purpose of proving what is not proved, then it does not differ from the Corroborative Instance. If Example is the same as Analogy, then it falls within the category of "*Pramān*,"; and if it is the same as Corroborative Instance, then it is only one of the factors of inferential reasoning. So that Example is nothing apart by itself."

This objection is truly unanswerable, we think! "Why so ?" For the simple reason that the objector does not understand any one of the three things that he talks of: The man who argues as above shows that he does not know what is 'Example' or 'Corroborative Instance' or 'Analogy'. We have already explained (under Analogy) that 'Analogy' does not afford any notion of similarity. As regards the 'Example', it does serve the purpose of affording the notion of similarity<sup>®</sup>. As to whether or not the Example serves the purpose of proving what is not proved, our reply is that it does not serve that purpose. Lastly, the exact nature of the 'Corroborative Instance' we shall explain later on, under the section dealing with that subject.

> LECTURE V. The Basis of Reasoning. Siddhanta—Doctrine.

BHAŞYA ON SUTRA 26.

[P. 36, L. 11 to L. 13 to P. 37, L. 4].

We now proceed to define Doctrine, Siddhanta. The word 'Siddhanta' is made up of the two words 'siddha' and 'anta'; of these the word 'siddha' denotes all those things with regaad to which people have the idea that 'this is so and so, 'this thing has such and such a character;' and the word 'anta' denotes the conviction or opinion that people have with regard to the particular character of those things<sup>†</sup>. This Siddhanta is thus defined :--

•The similarity between the 'Example' and the thing sought to be elucidated by its means consists in both being concomitant with that which proves the conclusion, e.g., the similarity of the ki chen (Example) and the hill lies only in this that both contain *smoks*; and the comprehension of this similarity is all that is meant to be accomplished by the citing of the Example.

<sup>†</sup>The word 'siddha' literally means accomplished, hence anything that has come into existence; and it is only with regard to such a thing that any opinion can be held as to its exact nature; the word 'anta' means and; by which, in the present context, is meant that final and well-determined conviction which people have with regard to the exact nature of any particular thing.

In regard to these lines of the B<sup>h</sup>diya, the Tdiparya has remarked that 'the author of the Baliya, without montioning the Süfrä containing the general definition of Siddhanta, has given an explanation of its import'. This has been taken by some writers to mean that there was some other Saira now lost to us, which contained the said general definition. As a matter of fact however, Saira 26, itself supplies,—specially according to the explanation of the Vdriika and the Tdiparya.

#### SUTRA 26.

DOCTRINE IS A THEOBY OR CONVICTION IN BEGARD TO THE EXACT NATURE OF A THING DEALT WITH BY PHILOSOPHY.\*

# Bhāşya on Sūļrā 27. [P. 37, L. 1 to L. 4.]

By tantrāsamsthilik in the Sūtrā (27) is meant the conviction resting upon the direct assertions of philosophy; the word 'tantra', 'philosophy', standing for the teachings in connection with things connected with one another; [this includes the first two kinds of theory mentioned in Sūtra 27]—'adhikuranasamsthilik' is the conviction resting on implication, and not on direct assertion;—and 'abhyupagamasamsthilik' is the hypothetical acceptance of an opinion not duly ascertained, [and not directly stated in. philosophy] —such acceptance being for the purpose of examining the detailed particulars of the theory.

the general definition of Siddh sta; so that all that the Tátparya means is that the explanation of the general definition by the Bhā: $y_a$ , instead of following the Sūțrā, precedes it.

"The Vartika has taken the two Sutras 26 and 27 together so the translation of the Vartika appears after Su. 27. The translation of the Sutra is in accordance with the interpretation of the Vartika and Tatparya; which explain the compound 'tanfrādhikaranābhyupagamasamsthitih' by takiug 'tantrā lhikarana' as a Bahurthi compound-' fautram adhikaranam yetam'; and this, with the rest of the word, as a genitive Talpuruse. The exact position of the Bhdays appears to be doubtful. If we take the Bhdgya, p. 37, lines 1-4 as explanatory of Satra 26, then, it is clear that it takes 'fanfrā lhikurnā bhyupagama' as a Doundva ; and thereby connects each of these severally with the word 'samsfhilib'. According to the Bhayya then, the translation of the Safra 26 would run thus - Doctrine is conviction resting upon philosophy, on implication and on hypothesis '. We have given preference to the Vartika interpretation ; because by the Bhayya the Satra is made to contain an enumeration of the different kinds of Siddhanfa; while by the Vartika interpretation this Satra supplies a general definition ; and the several kinds are enumerated in .the next Sutra 27. It is this interpretation by the Bhitya which affords occasion to the objector in the Variita to put the question as to the Sutra being a general definition or an enumeration. According to the Tatparya howover the Bhayya, p. 37, ll. 1 to 4 is explanatory, not of Sitra 26, but of Sitra 27. Just as the sense of Sitra 27, which contains the general definition of Doctrine, is given by the Bhāyya before the Satra, so of Satra 27 also the sense is explained before the Satra. As this interpretation reconciles the Bh 7493 with the Vartiks, we adopt it; and therefore take the lines of the Bhasya p. 37, Ll. 1 to 4 as explanatory of Sütra 27.

Doctrino thus is of four kinds, on account of diversity among the several philosophies,— as described in this Satra. And each of these four kinds is quite distinct.

DOCTRINE IS OF FOUR DISTINCT KINDS:---(1) DOCTRINE COMMON TO ALL PHILOSOPHIES, (2) DOCTRINE PECULIAE TO ONE PHILOSOPHY, (3) DOCTRINE BESTING ON IMPLICATION, AND (4) HYPOTHETICAL DOCTBINE.---(SUTEA 27).

VARTIKA ON SOTRAS 26 AND 27.

[P. 107, L. 3 to P. 108, L. 4.]

The  $Bh\bar{a}sya$  (p. 36, L. 11) says—' This is s) and so', 'this thing has such and such a character';—here the former expression expresses the general vague idea that one may have of a thing, and the second expression denotes the particular or detailed idea of the same thing; so that the definition of Doctrine comes to be this: Doctrine is a statement with regard to the general and spucial characters of a thing; \* and it is with a view to give expression to this same definition that we have Sūţra 26.

An objection is raised-"Is the Sutra, 26, intended to provide a definition of Doctrine? or its division"? 'What does this question drive at ?' "What is meant is as follows :-- If the Sūtra is intended to provide a definition, then the words 'tantra' (philosophy) and 'adhikarana' (implication) should not appear in the Sūtra; as for the purposes of definition it would suffice to say simply that Doctrine is a conviction in regard to the exact nature of a thing, 'abhyupagamavyavasthā siddhāntah'. If, on the other hand, the Sūtra were intended to provide a division of Doctrine, then the word 'sarvalantra (all philosophies) should appear in the Sūfra [as the 'theory common to all philosophies' is one of the four divisions of Doctrine]; just as it is necessary to mention the Pratijñā or ' Proposition': When the Sūtra enumerates the Factors of Reasoning, it mentions all the factors, Proposi-

<sup>•</sup> On P. 4, p. 1, Trans. p. 47, the Bh13ya has defined Doctrine as the ' statement of fact asserted in the form this is so'.

tion. Statement of the Probans Corroborative Instance. Reaffirmation and Final Conclusion ; similarly when speaking of the several kinds of Doctrine, the Sūtra should mention all the four kinds: the Doctrine common to all philosophies, that peculiar to one philosophy, that resting on implication and Hypothetical Doctrine. And under the circumstances (Sū. 26 providing the division of Doctrine) it would be necessary to have another Sutra for the providing of its definition; and further (the required division having been already provided by Sū. 26) some other meaning will have to be assigned to Su. 27 [as it could not be taken as providing the division of Doctrine, the sense in which it has been taken by the Bhasya]; and, if, in order to avoid this, Sū. 27 be taken as providing the division of Doctrine, then the preceding Sulra (26) will have to be totally rejected (as being useless). If it be held that Sū. 27 provides a re-division of what has been already divided in Sū. 26, then our answer is that this novel procedure (of dividing what has been already divided) would be against what the Bhaeya has declared above (Text p. 9 Trans. p. 97) to the effect that 'the Science of Reasoning proceeds by three processes-by enunciation, by definition and by examination', [as the relividing of the divided cannot come within any of these three |. Further a division is made for the purpose of restricting (the exact number of the variety of the thing divided); what purpose then would be served by redividing the divided ? If this latter also were held to be for the purpose of the said restricting, then our answer would be that, inasmuch as the purpose of this restricting of the number of Doctrines has already been served by the foregoing Sūtra (26), there is no need for this being done over again. From all this it follows that oue of the two Sutras (26 or 27) is not the work of the sage Gautama."

Neither of the two Sūtras can be rejected as not the work of the sage. As a matter of fact, the former *Sūtra* provides the *definition* and the latter the *division* (of Doctrine). It has been already said that division serves the purpose of restricting the number; so that what is meant by Sütra 27, which supplies the division, is that though Doctrine is of many kinds, yet all these are included in the four here mentioned, thus serving the purpose of *restricting* the number (to *four*).

"How can the former Sūtra (26) be taken as providing the *definition* of Doctrine?"

The words of the Sūțra—' *fanfrādhikaraņābhyupaga*-Vār. P. 108. *ma*'—should be explained as *fanfrādhi-karanānām urfhānām abhyupagamah*; those

arthas or things being called 'tantrādhikaranāh' which have the tantrā or philosophy for their adhikarana or indicator "; and Doctrine is the abhyupagamasumsthili of these things; i. e. the conviction or statement with regard to their character or exact nature. This means that the name 'Doctrine' cannot be applied to convictions with regard to things not philosophically real.

#### Внаяча.

#### [P. 37, L. 7 to L. 11.]

(1) The 'Doctrine Common to all Philosophies' is that philosophical conviction, or theory, which is not incompatible with any philosophy—Safra (28).

As for example, such opinions as 'the olfactory organ and the rest are Sense-organs', 'odour and the rest are the objects apprehended by means of these Sense-organs', 'the Earth and the rest are material substances', 'things are cognised by means of the Instruments of Cognition'.

 'Tanfryanfö vyufpädyunfö pramöyäni anina ifi fanfram, pramänam; fadöva adhikaranam äshrayah jñúpakafvöna yöfämarfhänäm fö fafhokfäh—Täfparya.

† 'If so, then the convictions of the Bauddha would not be 'Doctrines'; so that when they would make statements against their own tenets they could not be taunted with the charge of "Contradicting their own dostrines". With a view to meet this objection, the *Tatparya* says that what the Varitke means is that if the thing is believed to be philosophically real that would make the conviction with regard to it capable of being called 'doctrine'; and certainly what the Bauddha asserts is believed by him to be philosophically true; so that his convictions will be called 'doctrines'.

# VIRTIRA ON SUTRA (28). [P. 108, L. 6 to L. 14.]

The 'Doctrine common to all philosophies ' is a theory in regard to which all are agreed; e. g. the opinion that 'Pramanas bring about the cognition of Prameyas'.

An objection is raised :--- "Such a Common Doctrine does not differ from *Example* (as defined under Sū. 25); for just as there is no disagreement with regard to what serves as an *Example*, in the same manner there is none with regard to the *Common Doctrine*".

But we say that there is difference between the two:—In the first place an *Example* is that on which there is agreement between the two disputants, and not necessarily among all persons, as there is in regard to the *Common Doctrine*; and secondly the *Example* serves as the basis only for Inference and Verbal Cognition [as both of these Instruments of Cognition depend upon the previous cognition of relationships, of the Major Term to the Middle Term, in Inference, and of words to their denotations, in Verbal Cognition; so that the objects of these previous cognitions would serve as *Examples*]; while such is not case with Common Doctrine [which does not form the basis of Inference and Verbal Cognition alone].

"If *Example* be defined as 'the basis of Inference and Verbal Cognition', then such a definition would apply to Perception also; as Perception is the cause of both Inference and Word [and as such can be called the 'basis' of these]".

[It is not so.] As what serves as the *Example* is something known, something that forms the object of Perception, and which, on that account, comes to be called the 'basis of Inference and Verbal Cognition'; Perception, on the other hand, is only the *means* of that cognition (of the object); so that this latter can in no case be called the 'basis of Inference and Verbal Cognition'.

#### SOTRI 29.

BHISYA ON SUTBI (29).

# [P. 38, L. 3 to L. 6.]

For example, the following doctrines are peculiar to the Sāākhyas:—'An absolute non-entity can never come into existence', 'an entity can never absolutely lose its existence', 'intelligences are unmodifiable', 'modification belongs to the three gross products, Body, Sense-organ and Mind, and also to the subtle causes of these (in the shape of Buddhi Ahaākāra and the five Rudimentary Substances)'; and also the following which are peculiar to the Yoga\* philosophers:—'The entire elemental creation is due to the influence of the past deeds of men', 'the defects of men and also their activity are the cause of Karman', 'intelligent beings are endowed with their own respective qualities', 'that thing alone is produced is destroyed'.

VIETIKA ON SUTBA (29). [P. 108, L. 16 to L. 18.]

Doctrine peculiar to one philosophy consists in the limited or restricted acceptance of Generalities or Individualities or things possessed of these. *E. g.* that 'the sense-organs are elemental', is a doctrine peculiar to the Yoga-philosophers, and that 'they are non-elemental products' is a doctrine peculiar to the Sānkhyas.

## STTRA (30).

THAT IS CALLED 'DOCTRINE RESTING ON IMPLICATION 'ON THE KNOW-LEDGE OR ACCEPTANCE OF WHICH DEPENDS THE KNOWLEDGE OR ACCEPTANCE OF ANOTHER FACTT (SU. 30).

•Some people take this to mean 'Vaishēşika philosophy', on the ground that what is ordinarily known as the 'Yoga' philosophy does not hold the view 'hat 'asaf uţpadyaţē'.

+In connection with this *Satrā* the *Parishuddhi* adds an interesting note: "Bhūsana and others have provided two explanations of this *Sa*: (1) When an object endowed with the quality of omnisience is known, then alone is known the fact of Earth and the

# Bhāşya on Sūļrā (30.) [P. 38, L. 9 to L. 14].

When it so happens that a certain fact having become established or known, other facts become implied,-and without these latter facts the former fact itself cannot be established.-the former, constituting the basis of these latter, is called 'Doctrine resting on Implication' or 'Implied Doctrine.' E. g. when the fact that the cogniser is distinct from the body and the sense-organs is proved or indicated by the fact of one and the same object being apprehended by the organs of vision and touch,-the facts implied are :- (1) that there are more sense-organs than one, (2) that the sense-organs operate upon particular kinds of objects, (3) that they have their existence indicated by the apprehension of their objects, . (4) that they are the instruments bringing about the cognitions of the cogniser, (5) that the substratum of qualities is a substance other than the qualities of odour and the rest. and (6) that intelligent beings cognise only particular objects. All these facts are included in the aforesaid fact (of the cogniser being distinct from the body &c. &c.); as this fact would not be possible without all those other facts.

Vārțika on Sū!rā (30).

[P. 109, L. 1 to L. 3.]

'Doctrine resting on Implication' is the name given to that fact which is implied in the recognition of the meaning of such sentences or assertions (as 'such and such is the reason proving such and such a conclusion'). An Example of this kind of Doctrine is given in the Bhāşya—when the fact that there is a cogniser &c. &c.

# SUTRI (31).

WHEN A FACT IS TAKEN FOB GRANTED WITHOUT INVESTIGATION,<sup>\*</sup> AND THENCE PROCEEDS THE EXAMINATION OF ITS PARTICULAR DETAILS, WE HAVE A CASE OF HYPOTHETICAL DOCTRING (Sū. 31).

"The Vârțika explains 'aparleșifă' as not mentioned in the Săfras; but it appears simpler to take it as meaning 'not investigated.' The Tāfparya construes the

Yest having a maker; so the former is an Implied Dectrine; and (2) the knowledge of the fact of Earth &c. having a maker includes that of the fact that there is an omniscient being,—the latter being implied by the former, and here the former is an Implied Dectrine. The *Bhaya* and its followers have not given this twofold explanation, as there is not much real difference between the two".

## Bhāşya on Sīlfrā (31).

## [P. 39, L. 3 to L. 6.]

When a fact is taken for granted without investigation, this constitutes what is called 'Hypothetical Doctrine.' *E. g.* it is taken for granted, without investigation, that Sound is a substance, and thence proceeds an investigation as to whether Sound is eternal or non-eternal,—in which investigation are examined such details of Sound as its eternality or non-eternality. An author has recourse to this kind of Doctrine with a view to show off the cleverness of his own intellect and through utter disregard for the intellect of others.

# Vārļika on Sūļrā (31).

# [P. 109, L. 6 to P. 111, L. 4.]

The  $S\bar{a}!r\bar{a}$  contains the word 'aparīkṣi! $\bar{a}bhyupagam\bar{a}!$ '; and here 'aparīkṣi!a' stands for 'asā!ri!a', 'not mentioned in the  $S\bar{a}!ras$ '; so that the definition of Hypothetical Doctrine comes to be that it is that which is accepted, or taken for granted, even though not mentioned in the Sūtras; e.g., that 'Mind is a sense-organ' is such a doctrine for the Naiyāyikas; and that 'the auditory organ is  $\bar{A}k\bar{a}$ sha' is such a Hypothetical Doctrine for the Naiyāyikas and the Vaishēşikas.

That which is not duly investigated—*i. e.* what is not mentioned directly in the Shāsţra—is had recourse to with a view to show off one's cleverness, and through utter disregard for the intellect of others—says the Bhūṣya (P. 39, L. 5.) This is not right<sup>\*</sup>. "Why so?"

Süţrā thus—asüţrılābhyupagamāţhēţoḥ yaţaḥ fudvishēşapar:kṣaṇam kriyaţē fasmāţ vishdṣaparikṣaṇāţ jñāyaţē ashūs{riţamapi abhyupagaţam süţalkārēṇa.

This passage of the Vārţika is rather obscure. In introducing it the Tāţparya ays-'Having provided his own explanation of the Sūţra, the author of the Vārţika proceeds to criticise the explanation given by the Bhāşya.' From this it would seem that the whole of what is declared to be na yukţam forms part of the Bhāşya. As a matter of fact however, nowhere in the Bhāşya do we find the word 'aparīkṣiṭāḥ' explained as 'shāsṭrānabhyupagaṭaḥ'; on the contrary, such an explanation would not be quite in comformity with the Bhāṣya, then the proper reading a reference to the explanation provided by the Bhāṣya, then the proper reading For the simple reason that it is not right to disregard others. If the teacher is fully conscious of the incapacity of the man whom he is instructing, and knows that he is incapable of comprehending what is said to him, and yet he disregards his intellect, then the man is not instructed at all; on the contrary, he only becomes confounded; and further when a man is totally ignorant as d incapable of comprehension, what can be explained to him? If, on the other hand, the teacher knows the man to be capable of comprehension, and yet has no regard for him, that also will not be right; as it is bighly improper to disregard a man with a high degree of intelligence. For these reasons the Satra cannot mean that Hypothetical Doctrine is that which is accepted, though not mentioned in the  $Sh\bar{a}stra$ .

would appear to be- ' apar ksitah shistrabhyupagatah &c.'; the meaning being that a 'doctrine which is not duly investigated and is yet accepted in the Shāstra, with a view &c. &c.' But this is not compatible with what follows in line 15, below. Then again, the arguments put forward by the Vartika are aimed against the disregard for others ; while the criticism concludes with a disavowal of the explanation that Hypothetical Doctrine is the abhyupagama of the ashastrifa. So that it would seem that there is something wanting in the text of the Vartika as it stands. The whole difference between the two interpretations appears to be this: According to the Vartika the doctrine is not mentioned in the Satra only, but, is adopted by the Shastra, in every other treatise dealing with it; while according to the other explanation the Doctrine would be one that is not put forward in so many words in any treatise on the Shastra, but its acceptance is indicated by certain questions that are discussed in the treatises. It is doubtful however if the latter interpretation is really what is put forward by the Bhasya ; as the words used by the Bhasya are simply-aparikithm abhyupagamyafe, 'is accepted without investigation': and this does not mean exactly what has been criticised by the Vartika.

presumption [as is the case with the last two kinds of Doctrine]; so that what is the use of provi ding any detailed explanation of this subject?" Others again have argued that 'Sighanta,' Doctrine, is only another synonymn for 'pakea', 'opinion' or 'view.'

We do not quite understand the assertion that 'Doctrine' is only another name for 'opinion.' For as a matter of fact that is called 'Doctrine' which is regarded as fully established or proved; while when the same is asserted or put forward with the firm conviction of its being an established fact, this assertion is called 'opinion '; so that the 'opinion ' is that by means of which a certain fact is put forward as an object (to be explained) by one disputant to another; and thus the word which denotes an *instrument—i.e.*, the word 'opinion' cannot be the synonym of that which denotes the object—i.e., the word 'Siddhānta'. If two such words were to be regarded as synonymous, then the word 'parashu', 'axe', would have to be regarded as synonymous with the word 'chhēdana',

Vär : P. 110.

'cutting'. As a matter fact, the axe is called an 'axe' simply, when it

stands by itself, not operated upon by any action of man; and that same axe comes to be called the 'cutting instrument' wnen a man raises it and lets it fall upon a piece of wood; so that the use of the two words 'axe' and 'cutting instrument' is dependent respectively upon the absence and presence of operation by man. Similarly with all those words that are denotative of any sort of active instrumentality; such words do not denote either the *thing* alone or the action alone by itself; they denote the *thing* as accomplishing a certain act, as endowed with a particular activity or operation. Thus then, the word 'opinion' being a word denotative of active instrumentality,—and the word 'Doctrine' not being so, how can the two be regarded as synonymous? Then again, the assertion that 'the Doctrine common to all Philosophies' is the same as 'opinion' shows that the Bauddha (who makes

such an assertion) is truly an adept in the matter of synonyms! Opinion is that which is put forward only as a view to be examined and discussed : and yet it is identified with Doctrine, which is the name given to a view which is regarded as well-established and proved, and beyond all discussion and enquiry ;- this is truly wonderful ! If (with a view to escape from this anomaly) the Bauddha should deny the possibility of any such thing as ' Doctrine common to all philosophies', then also, while denying such a Doctrine, he will have to adduce reasonings in support of this denial; and in adducing these reasonings he will admit the Doctrine that a reasoning is to be accepted as proof; and as this doctrine itself is one that is 'common to all philosophies', the adducing of reasonings would be a practical contradiction of the assertion that 'there is no such thing as a Doctrine common to all Philosophies.' If, on the other hand, he does not adduce any reasonings, even then the self-contradiction does not cease, whether the reasoning be asserted or not asserted; that is to say, if he asserts that ' there are reasonings ' [in support of his view of denial of Doctrine], and then argues that ' there are no reasonings',-this involves self-contradiotion : if, on the other hand, he says ' there are no reasonings', then a mere denial proves nothing. For these reasons we come to the conclusion that it is wrong to say that there is no such thing as ' Doctrine common to all Philosophies.'

Then again, you (who hold ' opinion ' and 'doctrine ' to be synonymous terms), also become open to the following questions:—(a) Do you mean that ' opinion' is the genus of which 'Doctrine' forms a component individual; so that the word ' opinion' includes Doctrine? or (b) that the two are precisely synoymous (with exactly the same extension and intention)? (a) The first of these views is simply not possible, for the simple reason that the extension of the word 'Opinion' is not wide enough to include Doctrine; in fact 'Opinion' cannot include 'Doctrine' because Doctrine is not something to be proved (which every opinion is); in the case of real genuses we find that the genus 'Being' includes Substance, Quality and Action, because it is of wider extension, and being of wider extension it forms the genus; the same cannot be said of 'Opinion' (in relation to Doctrine). (b) As regards the second view we have already said that the two 'words cannot be synonymous; and if 'opinion' were a synonym for 'Doctrine' then the latter would have to be regarded as something to be proved; and to regard the 'Doctrine common to all philosophies' as something Vär. P. 111. to be proved would be a contradiction in terms.

Another objection is raised against the third kind of Doctrine, the [Doctrine resting on Implication]—" The Doctrine resting on Implication does not differ from ordinary Presumption". If you assert that there is no difference between the two, our answer is simply that they do differ; as Presumption consists in the acceptance of the meaning of a statement contrary to that of a previous statement, which has been duly comprehended; while 'Doctrine by Implication' is that which is implied by, and in keeping with, a previous statement.<sup>6</sup>

LECTURE VI. Reasoning. SUfras 32-39. BHISYA ON SOTEA (32) [P. 39, L. 7 to P. 40, L. 6] We next proceed to describe the Factors of Inference. SUfra (32).

(1) STATEMENT OF THE PROPOSITION, (2) STATEMENT OF THE PROBANS, (3) STATEMENT OF THE EXAMPLE, (4) REAFFIEMATION, AND (5) FINAL CONCLUSION; — THESE ARE THE FACTORS OF REASONING. (SU. 82.)

<sup>&</sup>quot;The previous statement is 'Devadatta who is fat does not eat during the day'; and the final cognition is '*he eats* at night'; the latter is to a certain extent contrary to the former. In the case of the Doctrine on the other hand there is no such contrariety.

"Some logicians declare that there are ten Factors: viz.— (1) Desire to know, (2) Doubt, (8) Capacity to accomplish what is desired, (4) Purpose and (5) Dispelling of the Doubt (in addition to the five mentioned in the Sn(ra);—why should not these additional five have been mentioned?"

To the above question the Bhāşya makes the following answer:-(1) As for Desire to Know, it is only that which urges, or brings forward, the purpose meant to be accom-plished by the cognition of a thing not already cognised. Why does a person desire to know what is cognised? He does so simply with the view that when he comes to know it in its true character, he will either abandon it, or acquire it, or treat it with indifference; so that the ideas of abandoning or treating with indifference are the purpose served by the true knowledge of the thing; and it is for the sake of this purpose that the man desires to know the thing ;-and certainly this desire does not prove anything [and as such cannot be regarded as a factor of reasoning, which is meant to prove the conclusion]. (2) As for Doubt, which forms the basis of the Desire to Know, it apprehends mutually contradictory properties; and as such it can be regarded as only proximate to true cognition; as of two contradictory properties only one can be true; † So that even though Doubt has been dealt with separately, as a category by itself [it will not be right to

• The Jaina logician, Bhaqrabāhu (B. C. 433-357), who wrote the *Dashavaikāli-kāniryukţi*, lays down ten Factors; though another Jaina logician, Siddhasēna-Divākara (A. D. 1-85) mentions only five. The ten factors of Bhaqrabāhu are: -(1) *Praţijā*d, Statement of the Proposition; (2) *Pratijāāribhakţi* Limitation of the *Praţijā*d; (3) *Hāţu*, Statement of the Reason, (4) *Hāţuvibhakţi*, Limitation of the *Hāţu*; (5) *Vipakşa*; Counter-proposition; (6) *Vipak;apraţişādha*, Denial of the Counter-proposition; (7) *Dṛiţdaţa*, Example; (8) *Akāākţā*, Doubting the Validity of the Example; (9) *Ākiūkţāpraţişāhda*, Dispelling of the Doubt; (10) *Nigamana*, Final Conclusion. The Samshayavyudāţa, of the *Bhāṣya* stands for the '*Ākāħ kţapraţisādħa*', and '*Samsħaya*' for the '*Ākāħţā*', of Bhadrabāhu. But here the parallel ceases. It would seem therefore that the *Bhāṣya* had in view a writer other than Bhadrabāhu.

† The Puri manuscript reads vydhafadharmopasafghafafaffva.....Though the grammatical construction of this reading becomes difficult, the sense becomes clearer. With this reading, the translation should run as follows :— 'Doubt is nearer to Wrong Cognition ; i. e., to that form of Wrong Cognition which apprehends two contradictory properties at the same time ; for the simple reason that of the two contradictory properties only one can be true ; so that not being of the nature of true Cognition, Doubt cannot prove anything.'

regard it as a Factor of Reasoning, as] it cannot prove anything (not being of the nature of true cognition). (3) As regards . Capacity to accomplish what is desired, - as for instance the Instruments of Right Cognition have the capacity of accomplishing, for the cognising agent, the apprehension of the objects of cognition, -- this could not form part of an argument put for ward for proving a proposition, in the manner in which the statement of the Proposition forms part of it. (4) As for Purpose, --- which consists in the ascertaining of the real nature of the thing sought to Le known, - this is the result, and not a factor, of the argument put forward to prove a proposi-(5) Lasily, as for the Dispelling of Doubt, -- which tion. consists in the setting forth of the counter-proposition and then denying it,—this only tends to lend support to some other Instrument of Right Cognition; and it cannot be regarded as a part of the argument put forward to prove a proposition. [Though Desire to Know and the rest cannot be regarded as Factors of Reasoning] yet Desire to Know and the rest have their use in Discussions; specially as they help the thing concerned to become known. As for the Statement of the Proposition and the rest, on the other hand, inasmuch as these tend to bring about the true cognition of the thing, they are regarded as parts, factors, of the argument that is put forward to prove a proposition.

### Vārļika on Sūļra (32).

# [P. 111, L. 6 to P. 112, L. 4].

This is a Sufra 1 laid down for the purpose of pointing out the divisions or kinds of 'Factors'; and the mention of the divi-

<sup>‡</sup> When an Inference is put forward to prove the non-eteruality of Sound, the counter-proposition is assorted and denied by means of the statement 'if Sound were eternal it would not be a product'; and this is a Hypothetical Reasoning which lends support to the previous Inference; and it cannot, by itself, prove anything.

† The Parishuddhi notes that the difference between the two lies in this that while Desire to Know and the rest help the Discussion by their mere presence, the Statement of the Propositions and the rest help by their cognition. If the Desire to know is present, the Discussion proceeds; it is not necessary to know or apprehend the Desire. But the Statement of the Proposition, the Statement of the Probans and the rest, should be themselves known, before they can lead to the final cognition of things.

\$ In anticipation of the objection that the Sūşra should have provided a general definition of 'Factors' before proceeding with the division, the Tapparys points out sion is for the purpose of restriction. "What is it that has to be restricted ?" What have to be restricted are such statements as that the inferential argument consists of ten or three Factors: Some people (the Jainas) declare that the inferential argument should consist of ten factors; while others (e. g. the Bauddha Logician, Dinnāga, in his Nyāyapravēsha) hold that it should consist of only three Factors : so that it is for the purpose of restricting or precluding both these assertions that it becomes necessary to specify the real Factors of Reasoning, in the shape of the Statement of the Proposition and the rest.

"But why should not Desire to Know and the rest be regarded as real Factors?"

They cannot be so regarded ; because, in the first place, Desire to Know and the rest do not help in proving the conclusion to the other party. Those alone are real Factors of Reasoning which, each by itself, serve to accomplish a purpose not accomplished by the other, and which, through these purposes, combine together in the form of a single compound sentence, and thus collectively accomplish the one desired purpose of proving the conclusion to the other party ;- the word 'Factor' itself denoting that the statement should form part of the inferential argument. "What do you mean by Inferential Argument here?" What we mean by 'Inferential Argument' in the present connection is that which, through the help of the Statement of the Proposition and the rest, serves to accomplish a particular purpose ;

that what the Parfika means by using the word 'Safra' here is that the Safra as it stands also serves to indicate the required general definition,—the word 'Safra' being used in its literal sense of 'sachagufi ifi Safram'. The required definition is indicated by the word 'arayara' itself : an arayaca or part is that which, in combination with a number of other independent parts, serves to accomplish a purpose which each of them individually could not do ; and this is exactly what the 'Factor of Reasoning' is : each of the five Statements by itself cannot prove the desired proposition , but when all become combined and treated as composing a single compound sentence, they accomplish that purpose. (See Varfika below, text, 1. 11.)

Downloaded from https://www.holybooks.com

so that, inasmach as the five statements collectively help in the accomplishment of that purpose of the Inferential Argument, they come to be called its 'Factors'; and Desire to Know and the other four (mentioned by the Jaina logician) do not, as a matter of fact, serve that purpose of proving the conclusion to the other party; and as such, these cannot be regarded as 'Factors' of the Inferential Argument.

Secondly, the *Desire to Know* and the rest cannot be regarded as 'Factors of Reasoning', because as a matter of fact, the person who puts forward a reasoning has a definitely *certaia* knowledge of what he is stating; in fact it is only when a man is sure of his conclusion that he can prove it; and it is not possible that such a man should still have left in his mind either the *Desire to Know* it, or a *Doubt* on that subject; then as for the *Purpose* and the *Capacity to prove*, these are implied by the mere proving or asserting of the reasoning itself [so that these also need not be separately stated]; it is a well-recognised fact that no person ever seeks to prove that which is either useless or incapable (of affording the necessary information); and hence *Purpose* and *Cepacity to Prove* also cannot be regarded as 'Factors of Reasoning.'

And yet 'Desire to Know' and the rest have their use in Discussions—says the Bhäşya (p. 40, ll. 4-5). The meaning of this is that they give rise to Discussions; unless there is a desire to know, no discussion Vār: p. 112, can arise; hence these should be regarded only as arousers of discussions, and not as Factors of Reasoning. And as the present is an occasion for describing what helps in the proving of a conclusion to the other party, what are mentioned are only the Statement of the Proposition and the rest (and not the Desire to Know §c.).

How the Inferential Argument cannot consist of only three (or two factors) we shall show later on, when we describe the fourth and fifth Factors—Reaffirmation and Final Conclusion.

# BHISYA ON SUTRA (33).

# [P. 40, L. 7 to L 10].

# Sūţra (33).

From among these (Factors) as divided above-

THE 'STATEMENT OF THE PROPOSITION' CONSISTS IN THE ASSERTION OF WHAT IS TO BE PROVED, THE PROBANDUM (Sūțra 33).

That is, the 'Statement of the Proposition' is that assertion which speaks of the Subject which is intended to be qualified by that property which has to be made known or proved (by the reasoning),—this is what is meant by the words of the Sūtra that '*Pratijita* consists in the mention of the Probandum'. [As an example of this, we have the statement] 'Sound is non-eternal.'

# Vārļika or Sūļra 33.

[P. 112, L. 5 to P. 121 L. 15.]

<sup>6</sup> From among these §c.'—says the Bhāşya; and this means that the Sāţra is now going to put forward the definition of each of the Factors comprehensively enumerated in the preceding Sūţra. The first factor, the 'Statement of the Proposition', consists in the assertion of the Probandum—says the Sāţra. Here the word 'Probandum' stands for that object which is qualified by a character to be made known or demonstrated; and the 'assertion'—i.e. using of words signifying the acceptance—of that constitutes the 'Statement of the Proposition'. As an example of this we have the Statement 'Sound is non-eternal'.

• An objection is raised—" The object is something accomplished, and as such it can never be the *Probandum*, the sādhya, which is something to be accomplished. That is to say, it is well known that the object, the dharmin, is that which is possessed of a dharma, property or character; and what is well known as an accomplished entity can never figure as something to be made known."

<sup>\*</sup> For a full discussion on this question, wide Vartika Text, above, P. 52.

This does not affect our position, we reply. As we have distinctly added the qualification of being qualified by a character to be made known; we do not mean to say that an object. merely by itself as such, is the Probandum; but that the Probandum is that object which is qualified by a character to be made known or demonstrated. " If the character is yet to be made known, it cannot serve as a qualification; and if it is a qualification, it cannot be something yet to be made known. As a matter of fact that which is not known can never be a qualification; every object is qualified by a character that is well known and accomplished, and not by what is to be made known and yet to be accomplished." True: that which is not known cannot be a qualification, but (in the example cited) the non-eternality is a character quite well known: but it is known as subsisting in the jur; and what is to be made known is that same well-known charact-"In that case what forms the or as belonging to S und. Probandum is not Sound but the non-eternality of Sound." Inasmuch as we distinctly add the qualification 'of Sound'. this objection does not affect us: when we say 'of Sound 'it is clear that it is neither the character of non-eternality by itself, nor the object (Sound) by itself; but what is meant to be the Probandum, to be demonstrated, is that mutual relation of qualification and qualified which subsists between the object, Sound, and the character of non-etern dity, which latter is already known as belonging to some other object; and certainly such a Probandum partakes of both (the object and the qualification). "What do you mean by the Probandum partaking of both? Which of the two is 'the qualification ? Is it the object or the character ? Is it the 'non-eterna. lity of Sound' or the 'Sound of non-eteruality ?" The correct view is that it is the object that is qualified ; the fact is that the object is already known in a general form, but is not

Vār. P. 113.

known in the particular form (of being qualified by a cortain character); and what the Inference is meant to demonstrate is some particular fact in regard to that thing. "But of the charleter there is no knowledge even in a general form". It is not true that there is no knowledge of the character; the doubt meant to be set aside by the Inference is always in the form—'this character (of non-eternality), does it belong to Sound, or to things other than Sound? [and this presupposes a knowledge of the character of non-eternality]. Thus then the conclusion is that what forms the *Probandum* is 'the non-eternality as subsisting in Sound'; and this is † certainly connected with such characters as *being a product* and the like; so that it is perfectly right to assert that the Probandum is the object qualified by a character to be demonstrated,—and that the assertion of this Probandum is the 'Statement of the Proposition.'

[The following objection is raised by the Bauddha philosopher, according to whom the denotation of every word and of every sentence is negative in its charactor, consisting in the negation of something else] - "In the case of a judgment, which is liable to be taken as denoting two restrictions or limitations, if you accept only one of these restrictions as its denotation, then you make yourself liable to censure. So that if your definition of the 'Statement of Proposition' consists of the judgment 'the Statement of the Proposition consists of the assertion of the Probandum', it would not be right to accept either one of the two restrictions denoted by the judgment; for instance, if the judgment is taken as denoting 'Sādhyanirdāsha Zoa pratijāt', 'Statement of Proposition is only the assertion of the Probandum', then what is restricted is the 'Statement of Proposition',

+ Both editions have a 'na' here; but if the character of being a product is not connected with the non-eternality Sound, then the inference, 'Sound is non-eternal, because it is a product', would not be valid. We have therefore omitted the 'ua'.

<sup>&</sup>lt;sup>o</sup>Both the *object* and the *character* are known ; but they are not known as related to one another ; and it is this relation between the two that is meant to be demoustrated by the Inference.

and not the 'assertion of the Probandum'; and this would mean that there can be no 'Statement of Proposition' apart from the 'assertion of the Probandum', though the 'assertion of the Probandum' there can be also apart from the 'Statement of Proposition'; so that it would not be correct to say that ' the assertion of the Probandum must be the Statement of Proposition'; and this would mean that the definition provided by the Sūtra is not a correct one; many an 'assertion of Probandum' not being 'Statement of Proposition', ex hypothesi; and the definition thus becomes too wide. If, on the other hand, the judgment be taken as denoting the restriction, 'Sadhyanirdeshah pratijna eou', 'the assertion of the Probandum must always be the Statement of Proposition',-then what is restricted is the 'assertion of the Probandum', and not the Statement of the Proposition'; and the meaning is that there is no 'assertion of the Probandum' apart from the 'Statement of Proposition', though there is 'Statement of the Proposition' also apart from the assertion of the Probandum'; and in this case also it will not be right to define the 'Statement of Proposition' as the 'assertion of the Probandum'; since ex hypothesi, the 'Statement of Proposition' having a wider extension, the defining factor 'assertion of Probandum' would fail to include all cases of the 'Statement of Proposition' (and the definition would thus become too narrow]. Both these restrictions would be undesirable. as] that which is 'too wide' cannot be a true definition ; c. g. having horns cannot be a true definition of the cow (subsisting as it does in the cow as also in many other animals). [And it has been shown that the proposed definition is too wide, if the restriction applies to the 'Statement of Proposition '] :-- similarly that which is too narrow cannot be a true definition; e. g. being adarous cannot be a definition of Substance [as it subsists only in one substance, the Earth]; [and it has been shown that the proposed definition is too narrow if the restriction applies to the 'assertion of the Probandum'].

If, in order to escape from these difficulties, the definition be taken as denoting neither of the two restrictions, then the assertion becomes meaningless. And apart from these three interpretations, no fourth can be placed upon the sentence. Hence the conclusion is that it is not right to define the 'Statement of Proposition' as the 'assertion of the Probandum'."

We do not quite understand the position that every sentence must signify some sort of restriction; for instance, when a cowherd indicates the path by saying 'this is the path leading to the city of Shrughna',-in this sentence we do not find any restriction being applied to anything. It is a case of restriction only when after a general statement some sort of specialisation is intended; that is to say, when a sentence directly signifies something general, and it is found that such generalisation leads to undesirable contingencies, people have recourse to restriction for the purpose of avoiding these contingencies .; in the case of the definition in question-"The Statement of Proposition consists in the assertion of the Probandum.'-we do not find any undesirable contingency in the shape of undue extension and the like; for the avoiding of which recourse should be had to restriction. And if recourse were to be had to restriction in the case of each and every sentence. then this would go directly against all ordinary usage. As a matter of fact (in ordinary usage) there is room for restriction only where there is occasion for qualification; so that it is no incongruity if in any particular case neither of the two restrictions is found possible.

The Bauddha raises another objection against the definition—"If you define the 'Statement of Proposition' as 'the assertion of the Sādhya or Probandum,' then this definition would become applicable also to the (assertion of) such Probans

<sup>\*</sup> For instance, if Perception were defined simply as 'that which is produced by sense-object contact', it would include pleasure also; hence by adding 'Cognition', the definition is restricted to perceptional Cognition only — Tatparya.

and Example as are sādhya, i.e., not known; e.g., the Probans in the reasoning 'Sound is eternal because it is visible,' and the Var. P. 114. Example in the reasoning 'Sound is eternal because it is not tangible; like cognition' [where the visibility of sound and eternality of cognition are both such as are not known, they stand in need of being proved and as such can be called 'sādhya;' so that the assertion of these would be the 'assertion of the sādhya'].''

T. The above objection has no force; as it is based upon an ignorance of the real meaning of the Salra. What is meant by 'the assertion of the Probandum or Sadhya' being the 'Statement of Froposition' is that it is a statement asserting, or indicating the acceptance of, the object as qualified by a character to be demonstrated. As regards the mention of visibility in the statement 'because sound is visible' (in the first of the two reasonings cited by the objector), as also the eternality of cognition in the statement 'because it is not tangible, like cognition' (in the second reasoning)-both of these are the mere mention of the characters; and they are not true statements of an object as qualified by a character to be demonstrated. "But what the term 'the assertion of the sādhya' denotes is the non-assertion of what is not sādhya: so that when you use the term 'the assertion of the Sadhya.' you mean the non-assertion of what is not-sādhya\*." But a thing is called 'asadhy1,' 'not-sadhya,' for two reasons: firstly, it is called 'not-sādhya,' 'not something to the demonstrated,' when it is siddha or well known ; and secondly it is also called 'not-sādhua,' when it is something of which any demonstration or proof is impossible; and what the term 'the assertion of sādhya' precludes is both these kinds of asādhya.

<sup>•</sup> What is not-sā ihyn, not something to be proved or mads known, in what is siidha, already known; so 'assertion of the sadhya' is the non-assertion of what is sid that or known; and when one speaks of the risibility of sount or the eternality of cognition, we have the assertion of what is not known at all; and this is certainly the non-assertion of what is known, which is the same as 'the assertion of sādhya.'

-that which is siddha, well known, as well as that which cannot be demonstrated; and the two instances that have been cited-viz. the visibility of sound and the eternality of cognition-belong to the latter category of 'anadhya,'-i. e., that which cannot be demonstrated : so that these two cannot fall within the category of 'the assertion of the sādhya," "In a case where such character (of Sound) as being a product and the like, which is known to and recognised by one of the two parties in a discussion, is put forward as sādhya,-then, in that case, the mention of this character of being a product would be 'assertion of the sūdhya,' and would, therefore, have to be regarded as 'the Statement of Proposition'." This does not affect our position; as neither of the two alternative meanings of this objection has any force at all. For. in the first place, if what the objector is referring to is the proposition in the form ' the character of being a product is the sādhya,' then our answer is that [in applying our definition to such a proposition, he shows that ] he has not grasped the meaning of the Sūtra. + Secondly, if he is referring to some such statement as 'Sound is a product,' then, in that case, what is urged as an objection against us,---niz., that the statement in question becomes a 'Statement of the Proposition -is something that we shall readily admit; as a 'Statement of the Proposition' in this form would not militate against our philosophy. [All this we have said after having admitted, for the sake of argument, that 'the assertion of sudhya' denotes the 'non-assertion of the asadhya'; but] as a matter of fact, when you assert that ' the Statement of Pro-

Downloaded from https://www.holybooks.com

<sup>•</sup> The contention of the Bauddha would have had some force if all 'asādhya' were 'biddha' or known ; as it is however, 'asādhya' also includes things that can never be known or demonstrated And as the instances cited fall within this latter class of 'asādhya,' they cannot be included under the definition.

 $<sup>\</sup>dagger$  The Proposition ' the character of being a product is sadhya' is the mere mention of a character; it is not the statement asserting an object as qualified by the character sought to be demonstrated; and this is what is meant by the definition as given in the Satra.

position is called the assertion of the sādhya, because this latter term means the non-assertion of the asādhya', your assertion is not quite right; because in reality the signification of words is both positive and negative; so that it is not right to restrict the denotation of words to mere negation; in some sentences the denotation consists of affirmation, while in others it consists of negation; so that one who holds that the denotation of every sentence must consist of negation only, or of affirmation only, lands himself in difficulties [and it is on this assumption that the whole Bauddha objection under consideration is based];—and we shall show later on why the denotation of words cannot consist of negation only.

II. [The second answer to the Bauddha objection is as follows]—The Bauddha has argued that—" if the Statement of Proposition be defined as the assertion of the Sūdhya, this definition would apply also to such Probans and Example as are 'Sādhya', i.e., still to be known and demonstrated". To this our answer is that there can be no such application ; as the word 'Sādhya' in our definition is meant to be qualified by the word 'Siddhānța'; our definition does not mean the assertion of the mere Sādhya; it means the assertion of that 'Sādhya' which represents a doctrine:

Vār. P. 115. and as such how can it apply to the unknown Probans and Example? That 'Siddhanta' is meant to qualify the 'Sādhya' of the present Satra is shown by the sequence; that is, by the fact that the mention of the Factors (of which the Statement of the Proposition is one) follows immediately after that of Siddhānta. "If 'Siddānta' is a qualification of 'Sādhya' because of the sequence, then the definition should be in the form ' fannirdēshah pratijāā', 'the Statement of the Proposition consist in the assertion of that' (i.e., of the Siddhanta)". Certainly not. It is necessary to add the word 'Sādhya' for the purpose of excluding

• A Doctrine is that opinion which is based upon valid proofs ; and certainly that which is unknown cannot be said to be based upon valid proofs.

the Doctrine Common to all Philosophies; if the definition consisted of the form 'the assertion of that', then as the noun that has gone before is 'Doctrine' (Siddhauta) in general, the Pronoun 'that' would refer to all forms of Doctrine ; so that the Doctrine Common to all Philosophies also would naturally become included (which would not be right) ; and it is for the purpose of avoiding this that the word 'Sādhya', ' to be demonstrated', is added; so that what is meant is the assertion of only that Doctrine which has to be demonstrated, and not that of the Doctrine accepted by all (and hence needing no demonstration). "The exclusion of the Common Poctrine would be got at by the force of circumstances : Though it is true that the definition in the form 'it is the assertion of that ' would be too general and wide, yet the Common Doctrine could be excluded by the force of circumstances ; that is, by the circumstance that the Common Doctrine does not stand in need of being demonstrated, while the other kinds of Doctrine-that which is peculiar to one Philosophy and the rest-are, in certain, cases\* in need of being demonstrated. As an example of such exclusion we have the case of the assertion 'feed the Brahmanas', where, though the word 'Brāhmanas' is too general, the assertion becomes restricted within certain limits by the force of the circumstance that it is absolutely impossible to feed all Brahmanas." If the 'force of circumstances' were to be admitted in such cases. then, in the present case, nothing need have been said; even the words 'tannirdeshah' pratijna' should not be said : ' pratijnā pratijnā', ' Statement of the Proposition is the Statement of the Proposition', should be the form of the definition ; all the specification and restriction that is needed would be got at by the 'force of circumstances.' Please

<sup>•</sup> This qualifying phrase has been added in view of the objection that, if the other kinds of Doctrine are all 'Sadhya', then there is no need of mentioning them apart from the Sadhya; 'in certain cases' means in cases of disagreement or difference of opinion. In the case of the Common Doctrine, no such disagreement is possible.

do not say—' What harm would that do to us ?'. How can you escape from being harmed by such a process, when there is a rejection of the definition that you put forward, in the form ' *tannirdeshah pratijnë* '?

III. [A third answer is given to the Bauddha objection]— The definition—' the Statement of the Proposition consists of the assertion of the  $s\bar{a}dhya$ '—is not open to the contingencies that have been urged against it by the Bauddha; because the presence of the Desire to Know (Doubt, Dispetting of Doubt, Oapacity to Prove and Purpose) is meant to be a qualifying factor; that is to say, the sentence ' the Statement of the Proposition consists of the assertion of the Sadhya' is intended to be qualified by the presence of ' Desire to Know' and the other factors that give rise to discussion; so that what is meant by the word ' Sādhya' is that object with regard to which there is desire to know fc. fc.; and the assertion of such a Sādhya is the ' Statement of the Proposition.' How, then, can this definition apply to the (unknown) Probans and Example ?\*

IV. [Another answer to the same Bauddha objection]— The verbal affix in 'sādhya' denotes deserving or capability; in the definition 'the assertion of the Sādhya', the word 'sādhya'—made up of the root 'sādh' and the verbal affix ('nyal') which denotes deserving or capability—means that which is deserving of being demonstrated; and as the assertion of such a sādhya would constitute the Statement of the Proposition, this definition could not apply to the unknown Probans and Example; as these are not deserving of being demonstrated.

V. [Another answer to the same objection]—It is well known that there is a distinct line of difference between the

<sup>•</sup> As with regard to these—the visibility of Sound or the eternality of cognition —there is a palpable absurdity, so that no one ever entertains any *doubt* or *desire* to know with regard to them.

characters of the Object and the Instrument; as a matter of fact the properties of the Object are entirely different from those of the Instrument: the property of the Object is that it is most desired by the agent, while that of the Instrument is

Var P. 116. that it is the most effective means; and certainly the character of one can never become the property of another. In the case in question, in the sentence 'the Statement of Proposition consists in the assertion of the Sādhya', the word 'sādhya' denotes the object (that which is desired to be proved), while the word 'chākṣuṣa' 'visible' (in the sentence 'because sound is chākṣhusa') denotes the means (the word meaning 'that which is perceived by means of the eye). Consequently there is no chance of the latter being regarded as 'sādhya', and having the definition applicable to it.

VI. [The sixth answer to the Bauddha objection]-Our definition cannot apply to the unknown Probans and Example, as things are divided into three distinct groups of the 'sādhya' (what is to be demonstrated), the 'asiddha' (the absolutely unknown) and the 'siddha' (the well-known); so that what is to be demonstrated is entirely distinct from what is well-known, and this latter again from what is absolutely unknown: That is called 'sādhya' (to be demonstrated) which is accepted and known by one of the two parties, and is addressed to another party as the object (of the action of demonstration) ;- that is called 'asiddha' (absolutely unknown) which is not accepted by either party; --- and that is called 'siddha' (well-known) which is accepted by both parties; consequently, by reason of this difference, when one uses the term ' well-known ', this does not apply either to what is absolutely unknown or to what is to be demonstrated; and similarly when the Salra makes use of the term 'sadhya' (to be demonstrated), it cannot apply to either what is well-known or to what is absolutely unknown; and if things, to which the term in question does not apply, were to be included

(in its denotation), then all things-even those that are well-known and accepted by both parties—could be regarded as included under the definition of the 'Statement of Proposition'!

VII. [The last answer to the Bauddha objection]—In the definition 'sādhyanirdēshah pratijñā'.—' the Statement of the Proposition is the assertion of the Sādhya'.—the word 'sādhya' must stand for that thing which forms the subject of the Statement of Proposition and the other Factors of Reasoning; for the simple reason that it is only an object, which as qualified by a well-known character, forms the subject of the Statement of Proposition and the other Factors of Reasoning,—that comes to be demonstrated or made known as the substratum of some other qualification (not known to the other party) [and as such comes to be called 'sīdhya']; and certainly this cannot apply to the unknown Probans and Example.

Thus then, inasmuch as our definition cannot apply to the Unknown Probans and Example, it is not right for the Bauddha to reject this definition and propose another, wherein he needlessly introduces the word 'ista'. 'desired'. \* That is to say, some people (the Bauddha logician, Subandhu, for instance) have thought that if the definition stands as 'the Statement of Proposition consists in the assertion of the Sadhya', then, inasmuch as the 'Sadhya' is not qualified by the adjective ' desired' the definition becomes applicable to the Unknown Probans and Example; and in view of this they have proposed other definitions of the Paksa or Subject of Inference. For instance, one of the definitions proposed (by Subandhu) is that ' Paksa is that which is desired to be demonstrated'. But here the adding of the worl 'desired' is entirely useless. Inasmuch as the wrong Probans and Example are both excluded by the term

<sup>•</sup> This refers to the definition put forward by the Bauddha logician Subandhu who says 'pake o yab ed thay if umistab', the 'Pakesa or Subject is that which is desired to be demonstrated '.

'sādhya' 'to be demonstrated', it will not be right to sav that the addition of the word 'desired' is for the purpose of excluding these (i. c. the wrong Probans and Example). And further, the qualification of being 'desired' is already got at by the fact of the 'pakea' being made the object (of the action of being demonstrated, in the sentence 'pakso yah sadhayitum istah'); as 'ista' and 'ipsita' are synonymous terms [and the object is that which is the most *ipsila* ; so that when the *paksa* is made the object, it naturally follows that it is *ipsila*, which is the same as desired]. "But the word 'desired' can be explained as serving the purpose of excluding the undesired Subjects [such propositions for instance, as 'words are not expressive', 'fire is not hot' and the like]." But in reality not one of the 'undesired' iudgments cited by the Bauddha in this connection, every one of which is contrary either to the arguer's own assertions or to some other valid proofs, can ever be suspected to be 'desired' [so that any effort for the purpose of excluding such judgments is absolutely uncalled for]. For instance, when the judgment 'words are not expressive' is put forward, we find that what is affirmed here is the inexpressiveness of words, and yet it is words that are used to express that idea; so that this is a clear case of self-contradiction ;--then as regards the judgment 'fire is not hot', this is contrary to well-ascertained perception. In this same connection some people have also cited the judgment 'Sound is not apprehended by the auditory organ' as one contrary to perception. But this is not right \* as the functioning of the

Vär. P. 117.

sense-organs is not amenable to sensepercoption; as a matter of fact, the oper-

ations of the sense-organs are beyond the reach of the senseorgans themselves; so that no one can ever have any such

Downloaded from https://www.holybooks.com

<sup>•</sup> The *Tatparya* remarks that in course of his criticism of the Bauddha definition, the author of the *Vartika* also criticises some of the statements made, in this connec, tion, by the Bauddha writers.

perceptional knowledge as that 'such and such a thing is apprehended, or not apprehended, by the sense-organ'; in reality the functioning of sense-organs is always a matter of inference,-such functioning being inferred from the fact that the apprehension, of colour, f. i., appears when the organ operates and does not appear when it does not operate. Hence the judgment cited is not a true example of 'contrary to Perception'; a true example of which is the judgment 'fire is not hot.' Then again, as an example of ' contrary to the Scriptures', the Bauddha has cited the case of the Vaishesika making the assertion that 'Sound is eternal'; but this also. we find, is not 'contrary to Scriptures.' As the Vaishesika accepts the non-eternality of Sound, not on the basis of Scriptures, but on that of Inference; this Inference being based upon such facts as Sound undergoing modifications through its cause, and so forth; so that the judgment 'Sound is eternal' is contrary to Inference (and not to Scripture).\* " But the Vaishesika accepts the non-eternality of Sound on the strength of what is declared in the Sulra (of Kanada); so that an assertion contrary to that is a case of being contrary to But in this manner even the assertion that ' the Scriptures." jar is eternal' may be regarded as being 'contrary to Scriptures'. A real example of being contrary to Scriptures we have in the shape of the assertion that 'wine should be drunk by the Brāhmana'. Another 'undesired' judgment cited by the Bauddha is ' that which is contrary to well-known facts'; but we fail to understand what is 'contrary to well-known facts; as that alone is called a 'well-known fact' which is

Downloaded from https://www.holybooks.com

<sup>•</sup> The *Tatparya* remarks: As a matter of fact the view that Sound is noneternal has the support of Scriptures also. We have such declarations as 'Prajāpati oreated King Soma; therefrom seere the three Vedas bors'; but in view of the fact that there are also certain other passages that lend colour to the view that Sound is eternal,—e. g., 'neither being nor non-being existed in the beginning; the Scriptures alone existed',—if we depended upon the Scriptures only, there would be an uncertainty as to Sound being eternal or non-ternal; and as this uncertainty is removed by means of Laference, the idea of the non-eternality of Sound is regarded as inferential.

cognised by means of one of the Instruments of Right Cognition, Sense-perception and the rest [so that being 'contrary to well-known facts ' is nothing apart from ' being contrary to **Pramānas']**; e.g., the assertion that ' the moon is not Chandra' has been cited as an example of an assertion being ' contrary to well-known facts'; [but the only 'well-known fact' to which it is contrary is the fact that the word 'Chandra' is a name for the Moon; and this fact is known only by means of Inference based upon premisses derived from ordinary usage, where it is found that whenever the older man uses the word 'Chandra' the younger man always understands it to mean the Moon]; so that the assertion in question is only contrary to Inference; and as such falls under the category of being 'contrary to Pramanas', which has already been mentioned With all this however, it lies within the power before. of the Bauddha to regard all these cases as 'being contrary to well-known facts',---and then to urge that for the purpose of excluding these it is necessary to add the qualifying word 'desired' to the definition under consideration !

The whole of this matter (raise 1 by the Bauddha) we "Why so?" regard as highly improper. For this reason that 'self-contradiction' and the other defects (that have been mentioned in this connection) pertain to the assertion embodied in the 'Statement of the Proposition'; everyone of these defects is possible only in regard to the "How assertion, and not to the object (spoken of therein). Because the object remains the same; the character BO ? " of the object when it is affirmed is precisely the same as when it is denied. [So that when a man affirms something with regard to the object and then denies the same with regard to it, what he contradicts is his own assertion, and not the object, which by itself retains its own character in both cases]. "Well, the same may be said with regard to the assertion also; it may be said that the defects do not pertain to the assertion either." As a matter of fact the defects do not pertain to the object; nor do they pertain to the assertion; they pertain to the person (making the assertion). The fact of the matter is that the defects of the agent are attributed to him on account of certain actions of his; so the defects, though primarily belonging to the agent, become attributed to the action, and we come to speak, figuratively, of the 'defective action'; thus it is that the

Vār. P. 118.

defect of the speaker becomes indirectly attributed to the assertion, and we speak

of the 'defective assertion'; though primarily the defect belongs neither to the *object* nor to the assertion. Every object. by its very nature, is endowed with a capability for performing its own functions; and if it happens to be employed in a function other than its own, this only proves the inexpertness of the person so misusing the object; similarly every assertion is, by its nature, capable of expressing its own meaning; and if it happens to be used for the expressing of other meanings, this only proves the incapacity of the "Inasmuch as the assertion speaks person so misusing it. of the object, which forms its subject, it is only right that the defects of the assertion should be called the ' defects of the Subject'." This is not right; as if that were right, then the defects of the probans &c., also would have to be regarded as 'defects of the Subject'; it might be said, with equal reason, that, inasmuch as the Probans (and the other objects spoken of in the premisses) also are only Subjects, in some form, the defects of these also are only 'defects of the Subject': and the result of this would be that all the defects (of reasoning) will have to be regarded as 'defects of the subject'; so that it would not be right to urge these defects in the form that-(a) 'there is deficiency in the Probans,' or (b) 'the factors of the reasoning are defective', or (c) 'the rejoinder is faulty', or (d) 'the arguer is embarrassed', \*

<sup>•</sup> The translation follows the interpretation of the Tatparya. It appears simpler however to explain the compound as -nyana! defidosasya aksepah, suikarah, fasya

and so forth fas all these should be the 'defects of the "But the necessary restriction (that the defects Subject ']. of the assertion, and not those of the Probans, would taint the Subject) would be got at through the relation of expresser and expressed (between the assertion and the Subject), and through the relation of proof and proved (which subsists between the Probans and the Subject)." This not right: as there is no ground for such restriction. "What we mean is as follows :--- The Subject appears (in the reasoning) as an object of proof (forming, as it does, part of the premiss which puts forward the Probans), as also an object of the Statement of the Proposition (in the form of the conclusion): and the defects of this latter assertion may taint the Subject because this latter is expressed by that, and not because it is proved by it (which is the relation subsisting between the Probans and the Subject); so that there is nothing to show that the defects of the Probans are defects of the Subject; while as for the defects of the assortion, these are attributed indirectly to the Subject (on the ground mentioned Such indirect attributing of anything is not above)." permissible so long as its direct signification remains possible; for instance, when the assertion 'the platforms are crying out,' is made, it is found that the action of crying out is not possible for the platform; and on the ground of this impossibility we reject the ordinary direct signification of the said sentence, and take the word ' platforms ' in its indirect sense of man occupying the platforms; and this attributing of the indirect meaning is due to the impossibility of any basis or proof for the ordinary direct meaning;-now such are not the circumstances in the case in question: where find that it is not impossible for the defects of the we

bhācēņa as fifvēna udbhāvanam yēsām fani dāsaņāni na udbhāvan yāni ; (a) is the defect of the Probans; (b) refers to the defects of the premisses or the conclusion &c.; (c) is the defect of the rejoinder, and (d) belongs to the person putting forward the reasoning.

assertion to apply to the assertion itself; and it is only if there were such impossibility that the defects would be rejected in regard to the assertion and attributed indirectly to the *Subject*. If the rejection of the principal direct meaning were done by you arbitrarily, without sufficient reason, then this would be against your own following declaration<sup>†</sup>—'If the reason of the Naiyāyika is denied, the rejection of the principal meaning becomes quite arbitrary ' [where the arbitary rejection of the principal meaning is censured].

Vär. P. 119. "What we mean by the word 'isia,' 'desired,' in our definition is what it ordinarily denotes,—that is, that which is meant or intended [so that by adding this word we succeed in including that which, even though not directly asserted by the person as the Sādhya, what he is going to prove, is yet intended by him to be proved]'.

But this is implied by the very fact of his proving it; no one ever proves what he does not *desire* or *intend* to prove; even in a case where a man proves an *undesired* thing through fear, he cannot be said to be proving what he does not desire to prove; as by the act of proving he avoids the undesirable contingency (that he fears); and this avoidance is for him at that time, what is *desired* by him. So on this ground also the insertion of the word 'desired' is useless.

Similarly in the definition proposed by another Bauddha writer—that "the Paksa is that which is desired in the course of an enquiry",—the insertion of the word 'desired' is useless.

the the Tstparys nor the Pariskuddhi says snything as to the author of this declaration.

<sup>•</sup>If it were found that when the defects of the assertion are urged as tainting the assertion, they do not silence the man making the assertion, —then alone would it be justifiable to attribute these defects to the Subject; as a matter of fact however, the defects of the assertion are quite competent by themselves to silence the man.— *Taiparya*.

And further, what is an 'enquiry'? If 'enquiry' consists in the putting forward of reasonings for and against a certain conclusion, then there must be, in this, a congregation of several things; so that it cannot be known what is 'desired' as what: it cannot be ascertained whother what is 'desired' is 'desired' as what is proved, or as what proves, or as what refutes or as what is refuted. It may be held that-" " enquiry ' stands for doubt,-as when we speak of the 'enquiry' as to whether Soul exists or not, then the phrase 'doubt in regard to the existence and non-existence of the Soul 'is synonymous with the phrase 'enquiry as to the Soul's existence and non-existence '." But as a matter of fact, the word 'enquiry' does not signify doubt; nor does the word 'doubt' signify enquiry. In fact the name 'enquiry' is given to that process of putting forward reason. ings for and against two contradictory opinions, which follows after the arising of Doubt on a point, and which ends in the ascertainment or demonstration of one of these opinions; and certainly this process is not *Doubt*; as Doubt is uncertain cognition; and in a discussion there is no doubt, there being certainty in regard to both opinions in the minds of their respective exponents, who engage in a discussion only when they have a firm conviction in regard to the opinion held by themselves.

The above considerations also serve to reject the definition of *Pakṣa* as 'sādhyaţvēnēpsiţ...h pakṣ...Viruddhārthānirākriţaḥ', 'that which is desired to be proved, and which is not obsessed by anything to the contrary '. The phrase 'that which is desired' serving the purpose of excluding what is not desired, there is no need for the adding of the further qualification, 'which is not obsessed by anything to the contrary'. That

<sup>&</sup>lt;sup>9</sup>It is not clear who has proposed this definition. The *Tâțparya* simply sayssthänänțarīyam bhadanțasya lakşanam dăşayați. But a somewhat similar definition is found in the Nyāyabindu, which defines the *Pakşa* as 'svarāpāņaiva svayamişte 'nirākritah '.

is to say, just as in the other definition propounded by the Bauddha,- 'the Paksa is that which is desired to be proved',the qualification 'ista', 'desired', has been held (by one of your own logicians, Subandhu) to serve the purpose of excluding the undesirable Paksa, so also in the definition now being considered, you have the qualification 'Ipsita'. desired', which would serve the same purpose of excluding the undesirable Paksa; so that the latter half of the line .--' Viruddharthanirakritah', ' which is not obsessed by anything to the contrary ',-need not have been added. It will perhaps be urged that the qualification 'which is not obsessed by anything to the contrary' serves to preclude defects of the Pak a. But in that case, what the ia the use of the qualification 'desired'? If both the qualifications, 'desired' and 'not obsessed by anything to the contrary, are necessary for the purpose of precluding the defects of the Paksa, then the second qualification, 'not obsessed by anything to the contrary', should be added to also Subandhu's definition, that ' the Paksa is that which is desired to prove'. Thus then, when we come to examine these two definitions of Paksa Vār P. 120. (as propounded by the Bauddha,) we find that while one is deficient or short, the other is too diffuse, containing superfluous qualifications.

In one of the definitions of Pakşa proposed by the Bauddhas we find the words 'ssayam sādhyaţvēna "psiţah', [and ssayam sādhayiţum iştah] 'that which is desired by the person himself to prove '; and here also, the qualification 'by the person himself 'need not have been introduced. "Why?" Because as a matter of fact an action always requires an agent; e. g. when it is said that 'the agent is cutting the tree', it is naturally implied that he is doing it by himself; as what a man cuts is not cut by another person; in the same manner,

<sup>&</sup>quot;We find a somewhat similar definition given by Pharmaktrii, in his Nydyabinde.

when a certain thing is proved by a person, it is naturally implied that it is proved by himself. It seems that the propounder of this fresh definition, having indicated superfluities in the definitions propounded by other logicians, himself lost sight of this defect in his own assertions.\* In the following Vadavidhana-tika we find the iustification of the qualification 'by himself':--" The word 'sadhayati', proves', is applicable to both cases-where the man does the proving himself and where he gets it done by another person; hence the qualification, 'by himself' becomes necessary ; otherwise the definition would become applicable to both cases." It is true that the word 'sadhayti' is applicable to both cases; but we do not see any reason why such a common word should be used at all (whereby it becomes necessary to add a further qualification): the definition might very well be stated simply as 'the Paksa is that which is desired to prove' [which has at least this virtue that it does not necessitate the adding of qualifications]. Then again, in the case of every word, as between its primary and secondary significations, it is only the former that is generally accepted; so that there would be no such acceptance with regard to the verb 'proves' applying to the man who gets the proving done by another person; it is true that the word 'proves' is applicable to both, the man who does the proving himself as well as one who gets it done by another person; but, as a rule, it can apply to the man who is made to do the proving [as it is he that actually does the proving], and not to him who gets it done by another person; as to this latter the word could apply only indirectly, while to the man who actually does the proving, it applies directly. Further.

"The real sominative of the verb, 'proves', 'sighayafi', must be the man to whom belongs the actual action of proving. The person who gets the proving done by

<sup>\*</sup> **translated** thus—'not having duly considered the fault of superfluity in the assertion of other persons, he himself became bewildered in his own assertions.'

the infinitive affix ' fumun' always indicates the identity of the nominative agent ; and (in Subandhu's definition) we find the infinitive 'sadhayitum', 'to prove'; and the Infinitive affix has always been found to indicate the identity of the agent: for instance. in the sentence 'I go to bathe'. [the nominative of going is the same as that of bathing]; and in such cases we do not find the man saying, like a demented person, 'I am myself going to bathe '; so in the case in question also [the adding of the qualification 'by himself ' is absurd]. Thus then, we find that even though the verb ' proves ' may be common to both kinds of agents, yet, inasmuch as the root is gualified by the infinitive a ffix 'lumun', it cannot apply to the man who gets the proving done by another person. As for the view that-"the qualification by himself is intended to indicate that the conclusion that the man desires to prove is independent of Shāstra (verbal authority),"-we have, in this same treatiso supplied the refutation of this. [On p. 109, l. 1], where we have objected to the Bhasya definition of Abhyupagamasiddhānta.] "What is the refutation that you have supplied?" We have pointed out that 'it is not right to disregard others', and so forth. Further, what is that 'Shāstra', 'verbal authority', of which the conclusions' would be independent? "Verbal Authority consists, in words that are not contrary to Perception and Scriptures." In that case, when you say that ' the man proves a conclusion that is independent of verbal authority,' it means that his conclusions are not valid, not supported by proofs; and a conclu-

Var : P. 121.

sion that is not supported by proofs cannot be adopted by any person in his senses; nor would it be right to seek to prove such a conclusion.

another person can be regarded as a nominative of the action of proving, only indirectly; on the basis of the understanding that the man who gets an act done may be regarded as having done it himself. So that so long as it is possible to take the primary agent, the actual actor, as the nominative, there is no justification for applying it to the secondary agent.

In the Vādavidhi<sup>\*</sup> the definition put forward of the Statement of the Proposition is that 'the Statement of the Proposition is the mention of the Sādhya'. This also is not a correct definition ; as in whatever way it is interpreted, it is "How ?" open to objection. If the sentence-" the Statement of the Proposition is the mention the Sādhya '-is put forward in reference to the Paksa that has been spoken of before, then the introduction of the word 'sādhya' becomes superfluous; as the aforementioned ' pakea' could be referred to simply by the pronoun ' tat', and the form of the definition should be 'the Statement of the Proposition is the mention of that'. If, on the other hand, the definition has no reference to the Pakea, and is meant to be independent by itself, then it becomes open to all the objections that have been urged (on p. 113, l. 20, et. seq.) by you against our definition [As taken by itself the 'mention of the Sādhya' of your definition is the same as the 'assertion of the Sādhya' of our definition]. "Even so, the answer that you put forward against those objections can be put forward here also (in support of our You can not reasonably do this; as you definition)." admit the force and validity of those objections (inasmuch as they have been urged by yourself), while we have never admitted it. For instance, when a man urges against another the reasoning 'your mother is bad because she is a woman'. the porson thus addressed can say in answer that being a woman is not a reason for being bad; a woman is said to be bad only by reason of hor relations with men other than her husband; [while this answer would be quite effective in sotting aside the assertion of the mother of the second man being bad] any such answor would not be effective in setting aside the same charge against the mother of the man who originally sought to prove the bad character of one on the ground of her being a woman [as he

<sup>•</sup> This would appear to be the original of the **argumentar** referred, to above, P. 194.

apparently admits the fact that being a woman is a reason for being of bad character]; so that if he puts forward the answer that what proves bad character is, not being a woman, but having relations with men other than her husband,—he contradicts his own assertion that a 'certain woman is bad because she is as woman';—in the same manner, you would be courting self-contradiction, if you were to accept as true the answers that have been made against your assertion (against us), that 'the definition that the Statement of the Proposition as the assertion of the Sādhya, becomes applicable also to the assertion of the unknown Probans and Example.'

We thus conclude that our definition that 'the Statement of the Proposition consists in the assertion of the Probandum' is free from all faults.

## Sūtra (34).

THE 'STATEMENT OF THE PROBANS' IS THAT WHICH DRMONSTRATES THE PRODANDUM, THROUGH ITS SIMILA-RITY (*i. e.* A PROPERTY COMMON TO IT AND) TO THE EXAMPLE. (SU. 34).

# Вназчл.

## [P. 41, L. 1 to L. 3].

That which 'demonstrates '--i.e. makes known, or proves ---the 'probandum'--i.e., the property to be proved (as belonging to the Subject),---through a property common to the Example,---is the 'Statement of the Probans.' That is to say, when one notices a certain property in the Subject (with regard to which the conclusion is to be demonstrated)<sup>\*</sup> and notices the same property also in the Example, and then puts forward that property as demonstrating (or proving) the Probandum,---this putting forward of the said property constitutes the 'Statement of the Probans.' As an example (in connection with the conclusion 'Sound is not eternal') we have the Statement 'because Sound has the character of

<sup>•</sup> The term sighya, is used in the present context rather promisenously. It stands fot the *probandum*, the character to be demonstrated, the predicate of the conclusion,—as also for the *Subject*, the thing in regard to which that character is to be demonstrated.

being a product; as a matter of fact everything that is a product is not eternal.'

## VANTIKA ON SOTRA 94.

[P. 121, L. 16 to P. 125, L. 14].

The present Satra is a real 'Sutra,' a 'suggestive aphorism,' inasmuch as while directly providing the definition of the Statement of the Probans,-whose turn it was after the definition of the Statement of the Proposition,-it serves to indirectly suggest the presence of a property common to the example. The compound 'udaharanasadharmya' is to be taken as the Instrumental Tatpurns,,-the meaning being 'similarity to the Example.' "What is an Example?" We shall describe this later on. The 'Sadharmya', 'similarity' to the Example consists in the presence in the Example of the same properties that subsist in the Probandum; the meaning thus is that the property that subsists in the Probandum is of the same kind as that subsisting in the Example; it cannot be the same; as that property which subsists in one thing cannot subsist elsowhere; that is to say, the property of one thing cannot subsist in another thing; but a property Var, P. 122. of the same kind may be spoken of as the same.

It were possible to define the Statement of the Probans simply as (the statement of) 'sādharnyam', 'similarity' or 'common property'; but though this might suffice to indicate what is actually meant, yet it could not serve the purpose of excluding what is not meant; and every common property would come to be regarded as the Probuns; for this reason it becomes necessary to add the word 'Example,' for the purpose of excluding what is not intended to be classed as 'Probans';\* and by using the compound 'the property common to the Example' the property belonging to that which is not

<sup>•</sup>Mere 'similarity,' or prosence of common properties, is present also in such middle terms are 'Contradictory' and 'Specific; so the statement of these also will have to be regarded as the true 'Statement of Probans,' if the definition did not mention the word 'Example;' as every one of these would be 'similar' to something.

an Example becomes naturally excluded; [so that this excludes the Inconclusive Probans also; as even though this has 'properties common to the Example,' it also has properties common to what is not an Example]; or this exclusion may be got at by means of restriction; the expression 'property common to the Example' being taken as emphasising two restrictions—(1) that the 'common property' must belong to the Example only, and not also to what is not Example, and (2) that there should be similarity only, and not dissimilarity also.

"What is it that should possess ' properties common to the Example '?"

What else could it be? It is the Probandum; as that forms the principal member (in the whole reasoning process); and also because that is the most proximate. Inasmuch as the Probandum forms the most important member, and also because it is the most proximate, the ' property common to the Example' must be that belonging to the Probandum; and here also when we speak of 'the common property belonging to the Probandum,' we imply the two restrictions,—(1) that the common property belongs to the *Probandum only*, and also (2) that there should be *similarity only*, of the Probandum. "What do you gain by this *restriction*?" What we gain is that we exclude (by means of this restriction) that (invalid) Probans which subsists in only a portion of the Probandum [and as such is partly ' dissimilar' also].

[The Bhāşya says—' When one notices a certain property in the Probandum, and notices also the same property in the Example &c.; the Vār{ika proceeds to explain this]—The abovementioned Probans is noticed as accompanied by the Probandum and the Example. "What is this accompaniment of the Probans?" What is meant by the Probans being 'accompanied' by the Probandum is that it is invariably concomitant with the latter [i.e. wherever the Probans is, there the Probandum also is]; and what is meant by its being 'accompanied' by the Example is that it subsists in the Example.\*

Thus when we speak of the 'property common to the Example,' we get at the Probans with its two and three characteristics; we speak of the Probans as with two characteristics, with a view to those philosophers who do not admit of the existence of the 'Fipakia,'-i.e. the substratum wherein the Probandum is never known to subsist: for one however who does admit of the existence of the 'Vipaksa,' the Probans has the additional (third) characteristic of not having any property common with what is not Example. † With these characteristics then, there are four kinds of Probans, as follows :--(1)-(2)-two are affirmative-negative.-i. e. when the Vaishesika puts forward the reasoning 'Sound is non-eternal, (1) because it is a product, and (2) because having both genus and species, it is perceptible by our external sense-organ' (wherein the first Probans, 'being a product,' is one that subsists in the entire Sapakia, all non-eternal things; while the second, 'having genus &c... being perceptible by our external sense-organ,' subsists only a part of the Sapakea, subsisting in only a few non-eternal things]:-and (3 -(4)two are purely affirmative, -e.g. when the philosopher, who holds all things to be non-stornal, puts forward the

• The 'three characteristics ' referred to are :--(1) invariably concomitant with the Probandum, (2) subsisting in that where the Probandum is known to subsist, and (3) not subsisting in that where the Probandum is never known to subsist. The third is not possible for those who do not admit of any such thing where the Probandum is never known to subsist. These three correspond, respectively, to the following three characteristics of the Probandum mentioned by Prashastapada (P. 200)--(1) anumägina sambaddham, (2) prasid Haācha fadaneițā, and (3) fadabhāsā cha nāstyšva. The 'example' is that where the Probandum is known to subsist.

<sup>•</sup> Both editions read 'ch isambhavsh,' 'the impossibility of its subsistence in the Example.' This would be absurd; as if the Probans does not subsist in the Example, then either the Probans or the Example must be wrong. The sense demands the reading, either 'suddharans cha sambh wah,' 'possibility of subsistence in the Example,' or 'anuddharans chasambhavah,' 'impossibility of subsistence in what is not the Example.'

reasoning 'Sound is non-eternal, (8) because it is knowable, and (4) because it is non-corporeal' [where all knowability subsists in the entire Sapaksa, all non-eternal things; and noncorporeality only in a portion of the Sapaksa, subsisting in only a few non-eternal things]. Thus then, with the aforesaid two kinds of the affirmative-negative Probans, the two kinds of the affirmative Probans make the four kinds of Probans.

The exact nature of the Probans having been thus ascertained, by means of the words of the Sūtra, the fallacious Probans becomes excluded by the same. For instance, the mention of the character that the Probans is similar to the Example only (and not to the non-Example) excludes the 'contradictory' and the 'inconclusive' Probans; Var. P. 123.

the mention of the character that the Probans is similar only (and not dissimilar) to the Example excludes that Probans which does not subsist in the Probandum, and also that which subsists in only a part of the Probandum.-An example of the 'contradictory' Probans we have in the reasoning 'this animal is a horse, because it has horns'; that of the 'irconclusive' probans we have in the reasoning 'this is a cow because it has horns'; that of the Probans not subsisting in the Probandum we have in the reasoning 'Sound is non-eternal because it is visible'; and that of the Probans subsisting only in a part of the Probandum we have in the reasoning 'Atoms are non-eternal because they have odour.' 4 ]f the Fallacious Probans, the Inconclusive and the rest, become all excluded by the definition of the Probans itself, then they should not be mentioned separately; that is, if by the definition of the Probans, interpreted and amplified as above. the Inconclusive and the other Fallacious Probans become excluded, then these should not be mentioned separately, as they have been in the Sütra (1.2.5.)" It is not right to say that the Fallacious Probans should not be mentioned separately; as this separate mention serves the purpose of

restricting what would otherwise be too wide; that is to say, there being a possibility of many kinds of the Fallacious Probans, the enumeration of the 'Inconclusive 'and the rest serves to restrict their number (to five only).

\* Some people (e.g., Dinnāga) have raised the following objection (against our definition of the 'Statement of the Probans') :---

"What is the 'sadhana', 'the means of domonstrating', the 'Probans', apart from the 'Property common to the Example'? As a matter of fact, apart from the 'Property common to the Example' there is no other ' means of demonstrating the Probandum': so that the Sutra should be stated in the form-' the Probans is the property common to the Example', 'udaharanasadharmyam heluh'. [And not in the form in which it appears, ' udaharanasadharmyat sadhyasadhanam heluh']. It may be that the reiteration of the expression ' that which demonstrates the Probandum' serves the purpose of specifying the particular 'property common to the Example' (which, from among the numerous 'properties common to the example', demonstrates the Probandum); but even so the presence of the Ablative (in the word 'udaharanasadharmyat') is useless: there can be no such expression as 'nilādutpulum' (where 'nila', 'blue', serves the purpose of specifying that particular 'ulpala', 'lotus', which, from among numerous lotuses, is blue; the correct rendering of the expression is 'nilam utpalam'; so that just as in the case of qualifications we find both taking the same case-ending, so in the case in question also 'udaharanasadharmya' and 'sadhyasadhana' should appear with the same case-ending]. [The words of Dinnaga are simply 'nu panchami', 'no Ablative';

<sup>•</sup> It is interesting to note that the *Tātparya* actually quotes fifteen lines from the work of Diānāga, embodying the objection here taken up by the *Vārfika*; it is not possible, however, to translate the passage, as the text, in some places, appears to be defective; and the *Parishuddhi* affords no help; it dismisses the whole subject by the usertion 'sugamo diànā sabhañ gab', 'the refutation of Diānāga is easy.'

which have been explained by his followers in two different ways; one of these has been just mentioned]. Others offer a different explanation of the 'uselessness of the Ablative.' They declare that 'the Ablative is useless, because it is always found in connection with a different thing ': that is, the Ablative is found only when the word taking that ending denotes a thing different from the thing spoken of by means of the other words in the sentence; e. g. we have the Ablative in the sentence grāmādāgachchhafi' [where the 'grāma', 'village', is something different from the man who 'comes', 'agachchhali']; while in the case in question, we find that <sup>4</sup> that which demonstrates the Probandum' is nothing apart from the 'Property Common to the Example'; and hence the use of the Ablative in this case is meaningless. And under the circumstances, if you define the Probans as 'the Property common to the Example,' with the further qualification ' that which demonstrates the Probandum', your definition comes to be that 'the Probans is that which can be spoken of'! and this militates against your definition of the 'Statement of the Proposition' as 'the assertion of the Probandum': as we have never found any such composite whole as is composed of the 'object' and the 'word speaking of it'; and there being no such Composite Whole, neither the 'Statement of the Proposition' (which is the word or assertion) nor the 'Probans' (which, under your definition, is what is spoken of ) could rightly be regarded as a 'component factor', an 'avayava' (under which category both have been included).\*"

• The reading of the Bib. Ind. edition gives better sense than that of the Chaukhambha S. S. edition, and it also fits in more easily with the explanation given by the *Talparya* :-- 'When, as a matter of fact, that which demonstrates the Probandum is not something different from the Property Common to the Example, then the mention of the former becomes a mere the expression ; and this would mean that in qualifying the latter by the former, mply qualify it by a verbal expression ; so that your definition comes to be that the Probans is something that is qualified by-*i. e.*, capable of being spoken of by means of --a word. This would go against To the above we make the following reply :--The above objection does not demand a fresh answer; as it has been already met by what has been said before; that is to say, when we explained the definition of the Statement of the Probans to mean that 'it is that statement which demonstrates the Probandum through Properties Common to the Example', we set aside all objections against the definition; so that Dinnāga's objection does not call for any fresh answer.

The Bauddha puts forward another objection :---" As a Var: P. 124. matter of fact, it is the 'Common Property' which is 'fallible' (not invariably concomitant with the Probandum) or 'infallible' (invariably concomitant with the Probandum); and hence in the definition it is this 'Common Property' that should be mentioned as qualified (by relation to the Example); and not the statement of that property; specially as the said qualification cannot belong to a verbal expression; it is only that to which a qualification belongs that can be qualified; and it is the Common Property to which the said qualification belongs; and not to the Statement or verbal expression."

We do not understand what you mean by saying that a verbal expression has no qualification.<sup>•</sup> As a matter of fact, there are qualifications of the verbal expression just as much as there are of the objects. What are your reasons, we ask, for regarding objects as having qualifications? "Our reason lies in the fact that the objects are actually found in both forms: that is to say, we find objects to be both eternal and

your definition of Prafijst as the 'assortion of the Probandum'; as by this definition the Prafijst as is only verbal, an assortion; and this reasoning process is a Composite Whole composed of the Probans, the Prafijst &c., by virtue of which these latter are regarded as 'factors'; so that if the Prafijst is word, and the Pro bans is that which can be spoken of by means of word, then, inasmuch as no Composite Whole could be formed of the word and what is spoken of by means of it, the name 'factor' as applied to these would be a misnomer.

Both editions have 'kāraka'; but 'prakāraka' should be the better reading.

non-eternal, corporeal as well as not-corporeal [so that they have these qualifications.]" Well, in the same manner, verbal assertions also are capable of being spoken of as ' eternal' or ' non-eternal', ' corporeal' or ' incorporeal'; and as a matter of fact we have actually found such qualifications being assigned to verbal expressions. For instance, one man 'asks - 'what does this man say ?'-and he is answered - 'he says that it is a cow', 'gauh ifi'; - and here the particle ' ili' (' that') serves the purpose of differentiating the word 'cow' from all other words (and there can be no differentiation without qualification]. In fact Dinnaga himself has male use of many sentences qualifying verbal instance, he has defined Discussion as assertions : For 'that assertion which is intended to establish one's own view and demolish that of others' [where 'assertion' has the qualification of being 'that which is intended &c., &c.']: so that if he now asserts that a verbal assertion can have no qualification, he clearly contradicts all his own assertions. such as the one we have quoted-oiz : that 'Discussion is that assertion which is intended to establish one's own view &c. &c.' Thus then we find that by having recourse to extreme subtlety in finding fault with others, the Bauddha philosopher falls off from popular estimation !

Another objection urged by Dinnäga (above) is that "the Ablative (in 'Ud iharanasädharmyä!') is useless, because it is always found in connection with a different thing." But by this assertion also, our opponent goes against his own doctrine: You, Bauddhas, do not admit of any composite wholes, such as the 'army', the 'forest' and the like, as different (from their component parts, e. g. the horses and chariots, or trees); and yet you make use of the Ablative in -such assertions as--- 'vanäf ayam priksah änilah' 'this tree

<sup>&</sup>quot;As for example, the Mimansaka speaks of words being 'eternal', and the Valshösikas speak of them as 'non-eternal'.

has been brought from the forest', 'senalah ayam ashbah' 'this horse has come from the army'. In fact, in some Shāstras we find the Ablative used even when there is no difference between the things spoken of. For instance, the Nifishāstra declares that 'sanghioigrahābhyām sādguņyam sampadyate', 'the six kingly accessories follow from peace and war' [even though Peace and War are included among the six kingly accessories]'. Lastly, even though one of your own philosophers does not admit the existence of a Vipakea (a substratum where the Probandum is never known to subsist) as a distinct thing, yet he speaks of the Probans as 'vipaksad vishesah,' 'distinct in character from the vipakea'.-- so that how (in view of such an assertion) can the Ablative be regarded as always connected with (and denoting) a different thing [when any such thing as the 'vipaksa' is not admitted, and yet it is spoken of with the Ablative ending]?

Then, as for Dinnäga's assertion that the Safra should read 'vdaharanasadharmyasya', [with the Genitive], and not . 'udaharanasadhdharmyaf' (with the Ablative),-this also is not right; because what special case-relation he will express depends entirely on the option of the speaker; so that, in the case in question, if what is intended to be asserted were the fact that the 'udaharanaadharmya', 'the property common to the Example', is what is expressed by the 'sādhyavachana', 'assertion of the Probandum', then it would be right to use the genitive form; 'udaharanasadharmyasya', 'of the property common to the Example'; but what is actually intended to be asserted is the fact that the 'property common to the Example' is the cause (or basis) of the 'assertion of the Probandum'; and hence it is only right to use the form 'udaharamadharmyaf' with the Ablative denoting "But how can the 'property 'cause'. Vär. P. 125. common to the Example ' be the cause ?" It

can be so spoken of, as the 'assertion of the Probandum' is pessible when there is a 'property common to the Example'; that is to say, as a matter of fact, we find that it is only when the speaker (who asserts the Probandum) has observed a 'property common to the Example ' that he is led to make the said assertion, by such accessory causes as the desire to speak, the effort put forth, the rising of the wind from the throat, the striking of the palate &c. by that out-going wind and so forth; so that the said 'property common to the Example' also indirectly becomes a 'cause' of the assertion For these reasons, it is much more reasonable to use the Ablative than the Genitive (as proposed by Dinnāga).

As an example of the 'State nent of the Probans.' the Bhāsya has cited-' Sound is non-eternal, because it has the character of being produced, everything that has the character of being produced has been found to be non-eternal, in the case of such things as the dish and the like.' What is it that is non-oternal?" That is 'non-sternal' which has If you ask-what is non-eternality ?--our non-eternality. answer is that non-eternality consists in being connected with such existence as is characterised by both kinds of negation,or simply, in such existence as is so characterised.\* "What also is meant by 'ulpattigharmaka', having the character of being produced?" That which has 'uppatti, ' production,' for its 'dharma,' 'character,' is said to 'have the character of being produced': the affix 'ka' has the reflexive sense. "What is the meaning of being produced ?" Being produced consists in the precluding of the absolute existence and absolute non-existence of what is already qualified by non-existence; that is to say,

<sup>•</sup> The two kinds of 'negation' are (1) the prior negation, the negation or non-existence of the thing before it is produced, and (2) the after-negation, or non-existence that comes after the production, when the thing is destroyed. Both have been added with a view to show the absolute character of the destructibility, or non-etercality of Sound,—says the Tafparya.

when a thing is qualified by non-existence, --- i.e. it has not existed before.--and is afterwards found to come into existence,-there is a preclusion with regard to it of absolute (eternal) existence (such existence as belongs to Akasha and such other eternal things), and also of absolute non-existence (such nonexistence as pertains to absolute non-entities); and what is meant by the thing being produced is this preclusion,-or an existence qualified by this preclusion. [The Bhāşya has explained the word 'ulpulli' to mean 'coming into existence after having not-existed'; and] this explanation of the word, by means of the sentence, as given by the Bhāsya, supports our own interpretation of the word; that is to say, what the sentence 'comes into existence after having not existed'. • abhutva bhuvuti', means is precisely what is meant by 'is produced ' ' utpadyate.' And that which has this ' utpatti.' ' production,' for its characteristic is spoken of as ' having the character of being produced.'

BHASYA ON SUTRA (35).

[P. 41, Ll. 4 to 7].

"Does the aforeraid definition (stated in Sü. 34) constitute the entire definition of 'Statement of the Probans'?" No. "What then?"

### **S**aira (35).

## AND ALSO THROUGH DISSIMILARITY (Sũ. 35).

That is to say, the 'Statement of the Probans' is that also which demonstrates the Probandum through dissimilarity to the Example (*i. e.*, through a property that belongs to the Example and not to the Probandum). "How?" For example,—'Sound is non-eternal, because it has the character of being produced,—that which has not the character of being produced is always eternal, e. g., such substances as the Soul and the like '\*

<sup>•</sup> The reading of the printed text is defective; the proper reading is 'anifyah shabdah, ufpuffidharmakafraf, anufpaffidharmakam nityam, yafha afmādidraryam,'as found in the l'uri MSS.

VARTIKA ON SUTRA (35).

[P. 125, L. 16 to 137, L. 2].

Says the  $Bh\bar{a}sya$  (P. 41, l. 4)— Does the aforesaid definition constitute the entire definition gc. gc. As in the preceding  $S\bar{u}tra$ , the sense here also is that the 'dissimilarity' should be to the Example only, [i. e., the Vipaksa, where the Probandum is known to be absent], and not to what is not the Example,—and that to the Example there should be 'dissimilarity' only, and not similarity.

For example, 'Sound is non-eternal because &c. &c.'-says the Bhāşya. We think, however, that this declaration of the Bhāşya is not quite proper; as the difference between this reasoning and that cited in connection with the preceding Sāļra is merely verbal [the Probans in both being of the same kind: the character of being produced proving noneternality also through similarity to the Example]. As a matter of fact, the two examples differ in words only, and not in the meaning; and mere difference in words does not make the things different. It is true that there is differ-

Vār : P. 126.

ence in the examples (cited in the two reason-

ings); but this indicates a difference between the *Examples* only, which in the former reasoning was the *jar*, and in the present case, the *Soul* [and not between the Probans put forward, which remains the samo]. Then again, if the difference in the *Examples* were to make the *Probans* also different, then the present  $S\bar{v}$ !ra would be entirely superfluous, and should not find a place in the text; as the difference due to difference in *Examples* is already mentioned in another Sūtra (1-1-37) For these reasons we conclude that the example cited by the *Bhāṣya* is not quite the right one.

The right example of the Probans per dissimilarity we have in the following reasoning :-- 'This living body is not without a Soul,-as, if it were so, it would be without the life-breath,-- it is only what is found to be without Soul that is accepted by both parties to be without the lifebreath,\*—and as a matter of fact, the living body is not found to be without the life.breath,—hence the conclusion is that it is not without soul.' †

This negative reasoning, or reasoning per contra, serves only the purpose of denying or refuting the opinion of others.

We have thus explained the exact forms of the two kinds of Probans-1 Vita (Affirmative) and Avita (Negative); (the chief difference between the two consisting in this that) while the distinguishing feature of the Affirmative Probans is that it indicates by itself the real nature of things, that of the Negative consists in its refuting the views of other persons; the function of the former is to affirm and that of the latter "[The Affirmative Probans has been declarto deny. ed to indicate or make known by itself the real character of of things] -In which way does the Negative Probans conduce to make things known. (It must do this, or else it would not be a pramanal?" Well, in what way is the nature of things made known by the Affirmative Probans, which is admitted (by you) to be so? "It is by means of its concomitance that the Affirmative Probans proves the conclusion and makes things known." In that case why should not 'knowability' be accepted as a true Probans (in proving the presence of Soul, for instance)-

† That is, without that which is the constituent cause of such functions as desire and the rest; and it has been shown that that which is the constituent cause of desire and the rest, is something entirely different from Earth and the other seven subtances, and that this must be the Soul.

<sup>†</sup> The names 'sīfa' and 'avīfa' are fanfrānfarasiddka, says the Tāfparya. Doeš this refer to the Sāùkhya ? These names are thus explained...That which is got at by various methods...i. e. being invariably concomitant with the Subject, it is both concomitant and non-concomitant with the Sapakes, wield in prakering if a prapfak; and that which is not thus got at is the Avīfa.

396

<sup>•</sup> Such is the construction put upon the passage by the *Tātparya*; which also explains the term ' without the life-breath ' to mean ' without the desire that gives rise to the act of breathing '.

when concomitance has this power of proving the conclusion and making things known? " Knowability cannot serve as a true Probans on account of the fallibility or non-universal character (of its concomitance with the Probandum, all knowable things not being either with or without Soul)." Then. in that case, what proves the conclusion is not concomitance, but infallibity or universality (of concomitance). And if the Probans be held to prove the conclusion though the infallibility (of its concomitance), then there is no room for raising the question as to how the Negative Probans proves the conclusion; because the Negative Probans also proves its conclusion through the infallibility of its negative concomitance (i. e., "How so?" concomitance of absence). In this manner:-\* Inssuuch as the Example,-stated in the form 'everything that is without Soul has also been found to be without the life-breath &c.',--precludes the the absence of life-breath from all living bodies; [i. e. it is a recognised fact that the living body is never without the life-breath &c.-i. e., the absence of life-breath &c. is precluded from the living body]; and thus the absence of the Soul also becomes precluded, by virtue of the infallibility of the concomitance between absence of Soul and absence of life-breath. It might be urged that---" All that the reasoning just put forward may be taken as establishing is the preclusion of the absence of life-breath from the living body (this being a fact ascertained directly by perception); and it does not establish the preclusion of the absence of Soul." " Why ?" But this will not be right. Because your contention would mean that the necessary con-Var. P. 127. comitance fails in regard to the Subject. And

+ Your contention would mean that what fails is, not the concomitance between ebsence of life-breath and absence of Soul in all other cases,—this being known by so far as the failure of concomitance in regard to the Subject is concerned, if this could be urged as a fallacy, then, in the case of the Universal Affirmative Probans also, the doubt could be urged that 'even though Sound is a product, it may be eternal' [and the presence of this doubt would, according to you, make the Probans fallacious] !\* From all this we conclude that, just as in the case of the Universal Affirmative Probans, the conclusion is proved by the infallibility of the relation of concomitance, so in the case of the Negative Probans also the conclusion is proved by the infallibility of the negative concomitance. Thus then, we find that, just as in the case of the Affirmative Probans, the perception of one property leads to the inference of the presence of another property whose presence is infallibly (invariably) concomitant with the presence of the former property,-so in the case of the Negative Probans, the perception of the absence of one property leads to the inference of the absence of another property (whose absence is invariably concomitant with the absence of the former).

"If that be the case, then any particular body would have to be regarded as being inhabited by all the Souls". Clertainly not; as none of the alternatives admissible under your assertion would be acceptable. The sense of your argument is as follows :—" If you hold that the absence of one property is inferred from the

perception,—but the concomitance of these in regard to the *living body*, which is the *Subject* of the reasoning in question; and this would mean that the presence of the Probandum in this particular *Subject* is open to doubt; *i. e.* that the conclusion is doubtful. If then, it is the presence of this doubt that you are urging against us, then, inasmuch as such doubt is present in the case of every inference,—every inferential conclusion being primarily open to Doubt,—your contention would strike at the root of the entire inferential process; if the presence of such Doubt made the Probans entirely fallacious. If, on the other hand, by *fuilure of concomitance* you mean *ecrtainty to the contrary*, then, this would involve the fallacy of 'Annulment' (*Bādha*) and not ' Fallibility' (*Vyabhichāra*).—*Tāțparya*.

• As a matter of fact, the Subject, Paksa, is always sandig thas thy avin, that with regard to which the probundum is doubtful.

399

perception of the absence of another,-and the absence thus inferred proves the presence of Soul in the living body .then the particular body would have to be regarded as inhabited by all the Souls; for the simple reason that the absence of want of life-breath would, according to you, lead to the inference of the absence of Non-Dittha (i. e., the presence of Dittha, a particular personality); and thence one could reason as follows :- 'This particular body is not without the personality (or Soul) of Dittha,-as if it were so, it would be without the life-breath'; and a similar reasoning would also be put forward to prove that the body cannot be without the personality of Kapittha, \* and so on." But this is not right; as none of the alternatives possible under your reasoning can be admissible : For instance, it behoves you to explain your position when the following question is put to you-Does, or does not, the name ' Dittha ' signify something whose distinctive functions (desiring, willing and the like, all which are meant to be indicated by the presence of life-breath) are definitely known ? If the name expresses that whose distinctive functions are definitely known, then it stands only for a particular Soul, and the difference is merely verbal. If, on the other hand, it denotes something whose distinctive functions are not definitely known, then its absence cannot be proved; and yet it is this absence forms the principal factor in the reasoning you that have put forward. Thus then, it is clear that it is without grasping the sense of the Negative Probans that you have urged the objection that involves the absurdity of one body containing all personalities.†

† The sense of the argument is thus explained in detsil in the *Tatparya* :— In ordinary life we tind that there is breathing where there is desiring, and there is no breathing where there is no desiring; and this leads us to conclude that Breathing is the effect of D sire.—Desire itself being an effect, like the jur, must have a

<sup>•</sup> Both editions read 'diffha ' here ; but the sense demands here something other than 'Diffha'; hence we have adopted the name 'Kapiffha', which is the assumed proper name that is found in philosophical works along with 'Diffha.'

The Opponent [misunderstanding the author's explanation of the Negative Probans to mean that a correct conclusion is got at through a Probans that merely fulfills the condition that it does not subsist anywhere where the Probandum is known to be absent] raises an objection :---" If (as your above account seems to imply) the ' too exclusive ' property were a true Probans, then you would have to accept as correct such reasonings as-' the Earth is eternal because it is odorous'." Certainly not; you apparently have not understood what the true Probans is. It is true that the 'too exclusive probans' is a 'Probans per dissimilarity'; but it is not such dissimilarity as is too wide; in the instance cited by you the property of 'odorousness' is one that is too wide, subsisting, as it does, in eternal as well as non-eternal substances (i. e. in the eternal earth-atom and in the non-eternal jar). It is for this reason that in the case of the Negative as well as the Affirmative Probans, it is not mere

constituent cause; it has been proved that either the Body or the Sense-organs or any such material things caunot be the cause of Desire; and the only Substance that can be accepted as this cause is the Soul ; thus-even though much may not be known in regard to this Soul, this much is known that it is the constituent cause of Desire ; and from this it is to be understood that it cannot be present in the jar, which is devoid of breathing and desire. Thus then in the case of the jar it is found that there is invariable concomitance between the absence of such an effect as Breathing, and the presence of such a cause as the absence of Soul; so that in regard to the living body, when it is found that Breathing is present, -i. e., there is absence of non-breathing,--it implies the absence of non-Soul; which proves that the living body contains the cause of breathing ; and ' Dittha ' &c. also are only so many names given to the Souls. The upshot of all this is that all parties are agreed as to the absence in the Jar of the cause of Desire ; i.e. all are agreed as to the jar being without Soul; which shows that absence of Soul is concomitant with absence of Desire ; and as in the living body this absence of Desire is absent, it implies the abs nee of the absence of Soul. If Earth &c. were the constituent cause of Desire, then Desire would be possible in the jar also. As a matter of fact however the jar is never found to have Desire ; so that the absence of Desire implies the absence of any cause other than Earth &c. ; and when Desire is found in the living body this sets aside the absence of Desire, and this implies the setting aside of the absence of a cause other than Earth &c. ; and this other cause is the ninth Substance, Soul ; whose presence in the living body is thus established by the presence of Desire, which in its turn is proved by the presence of Breathing.

negation (non-concomitance) and affirmation (concomitance) that makes the true Probans; it is the unfailing character of the negation and affirmation. "True; but why cannot that too Exclusive or Unique Property be regarded as a true Probans, which subsists only in the Subject;—and in whose case there is neither anything where the Probandum is known to subsist, nor any where it is known not to subsist [and for this reason no failare of concomitance is possible]? For instance, in the reasoning 'all things are eternal, because they exist' [in this case the property of existence is one that must subsist in all things, and whose concomitance must therefore be unfailing]." True; the property of

existence is a unique one; but it is one Var. P. 128. that is not excluded from anything: and by reason of this non-exclusion it cannot be a true (Negative) For this same reason [i. e. by reason of Probans.\* the impossibility of non-concomitance] it also follows that that property cannot be regarded as a true Probans which subsists in a part of the Subject, and in whose case there is neither anything where the Probandum is known to subsist, nor anything where the Probandum is known to be absent; c. q., in the reasoning 'all things are eternal, because they are inunaterial'. "Why cannot that property be regarded as the true Probans which subsists in a part of the Subject, and in whose case, though there is nothing where the Probindum is known to be present, yet it is one that is excluded from (is non-concomitant with) a thing where the Probandum is known to be absent ?---e. g., when for one who does not accept any eternal Subject, the reasoning is put forward -- 'Speech and Mind are eternal, because they are audi-

<sup>•</sup> In the case of every Negative Probans — and the Unique Property can be a Negative Probans only, — there should be an unfailing *non-concomitance* between the absence of the Probans and the absence of the Probandum; and in the case of *existence*, no non-concomitance is possible; so that the *infallibility* required is absolutely impossible.

ble'."\* This also cannot be accepted as a true Probans; as it is excluded by what the  $S\bar{v}tra$  has declared: What the Sūţra has declared is—' Also through dissimilarity'; and here what is meant is—(a) that the dissimilarity should be to the example only, and (b) that to the example cited there should be dissimilarity only; and not that there should be mere 'dissimilarity' in general; so that the reasonings cited become excluded.<sup>†</sup>

Thus then we find that the Negative and Affirmative Probans are both such as are well-known to all persons, even to the youngest boy; so that when one declares that the Negative and the Affirmative Probans are not distinct 'means of proving the conclusion', this assertion should be regarded as proceeding from one who is wholly ignorant and deluded,

Some (Bauddhas) have defined the Probans as that which is disconnected with (separate from) the Vipaksa. The view of these people may be thus explained—". The Probans should be defined as that which is disconnected with the Vipakea (that wherein the Probandum is known to be absent). If the Probans were defined simply as that which is disconnected, which is separate, then every case of 'disconnection' would constitute a Probans; and every 'similarity' or 'connection' would become excluded; and this inclusion of every 'disconnection' and exclusion of every 'connection' would lead

• If the property subsisting in a part of the Subject is not accepted as a true negative Probans, simply because of the absence of a vipakia, then, there would be no ground for rejecting the Probans in the reasoning cited; as the property of *audibility* subsists in *speech*, which is a part of the subject 'Speech and Mind'; and there are plenty of things that are non-eternal and inaudible, hence there are available any number of examples of dissimilarity; such as 'that which is non-eternal is not audible'; and it is the presence of such an example of dissimilarity that the Satra puts forward as the sole condition for a negative Probans—*Talparya*.

+ That which subsists in only a part of the Subject is dissimilar, not to the *example only*, but also to that part of the Subject where it does not subsist.

402

to both desirable and undesirable things being included.\* Hence with a view to exclude the undesirable Probans, it becomes necessary to add the phrase 'with the Vipaksa': so that the true Probans is that which is disconnected with the vipaksa. But if the definition consisted simply of the words ' the Probans is that which is disconnected with the Vipaksa,' then anything and everything that would be 'disconnected with the Vipaksa' would become included; and as such things would be of several kinds, it becomes necessary to differentiate among them; and for that purpose we emphasise the fact that the Probans is that which is disconnected with the Vipaksa only.+ Then again, if we restel with this emphasis only, we would include under the valid Probans even such properties as abide in a part of the Vipuksu; -e. g. the Probans in the reasoning 'this is a cow because it has horns'; as the property of 'having horns' is one that is disconnected with (absent in) the Vipaksa only (i.e. only in what is not-cow); so that this would not be excluded by the said emphasis; and in order to exclude such invalid Probans, it becomes necessary to add the further emphasis that the property should be one that is always disconnected (and never connected) with the Vipaksa: this would preclude the property of 'having horns', as this is also connected, -and not only disconnected, -with the Vipaksa (being present in cows, and also in many animals that are not cows). Thus the definition proposed, when taken as thus doubly emphasised, becomes applicable to the ordinary positive

↑ Three kinds are possible :--(1) That which is disconnected with the Sapakya as well as from the Vipakya; (2) that which is disconnected with the Pakya as well as from the Vipakya; and (3) that which is disconnected with the Vipakya only. If the first two of these were included, then the Unique (or Singular) and the Unattested Probans also would have to be regarded as valid. Hence the necessity of the third alone being emphasised.

Affirmative Probans which is marked by the three characteristics (of residing in the *Pakşa*, residing in the *Sapakşa* and not residing in the *Vipakşa*)."

The above definition is open to the following objections:---It is true that the proposed definition succeeds in indicating the three characteristic features of the Probans; but at the same time it excludes that which, though subsisting in a part of the Sapakea, yet fulfills all the three conditions of the Vār. P. 129. valid Probans. "How so ?" By your first emphasis, the definition means that the Probans is that which is disconnected with the Vipaksa only; and this certainly excludes that which subsists in a part of the Sapaksa; as this latter is disconnected, not with the Vipakasa only, but with a part of the Sapaksa also. "But what we mean by the exclusion of that which subsists in a part of the Vipaksa is that that cannot be regarded as a true Probaus which is always disconnected with the Sapaksa; e.g. the Probaus appearing in the argument, 'this is a horse because it has horns'; and the example that we have cited of 'being a product of effort' (in the proving of the non-eternality of Sound) is not one that is always disconnected with the Sapaksa, \* being as it is, "connected' also, by reason of its subsisting in a part of the In answer to this explanation we urge as follows :---Paksa."† If what you now put forward is the correct view, then

<sup>•</sup> Three lines are wanting in the *Bib. Ind.* edition. This sentence as read in the **Chankhamba edition contains two** ' $\pi \alpha$ 's; the sense demands a single 'na.'

<sup>†</sup> The emphasis—'it should be always disconnected with the *sipakya*'—precludes that which subsists in a part of the vipakya'; e.g. 'this is a cow because it has horns'; and the other emphasis—'it should be disconnected with the *vipakya* only'—would be right only after the former emphasis; so that the definition of the Probans comes to be 'that which is always disconnected with the *vipakya* only'; and this means that that which is always disconnected with the *sapakya* is not a Probans. So that the Probans in the reasoning, 'this is a horse because it has horns', being always disconnected with the sapakya, is not accepted as valid. On the contrary, the Probans in the reasoning, 'sound is non-eternal because it is produced by effort', is one that is not always disconnected with the sapakya; it is also connected with it, and hence it is accepted as valid Probans.—*Tilparya*.

one of the emphasised forms that you have before given to your definition-viz : ' that which is disconnected with the Vipaksaouly'-becomes rejected; as such properties as the character of being a product of effort are not such as are disconnected with the Vipaksa only; being as they are, disconnected with a part of the Supaksa also. "Both the emphasised forms have their use in regard to a case that is not directly mentioned (or heard of)."\* In that case, just as that which subsists in a part of the Sapaksa is accepted as a valid Probans. so would be also that which subsists in only a part of the Paksa or Subject; that is to say, that same force (of emphasis) which establishes the validity of the Probans subsisting in a part only of the Sapaksa, will also establish the validity of that which subsists in only a part of the Subject; e.g. the Probans in the reasoning-'atoms are eternal because they have odour', † Thus then we find that if the two emphasised forms are taken as they stand, then the character of being produced by effort, which is accepted as a valid Probans, becomes

• This aphoristic sentence is thus explained by the Tapparya-The emphasised form, ' that which is disc mnected with the vipake a only', is not the only one that we accept ; as if we did so, then such properties as being produced by effort and the like would certainly become excluded; the fact is that the Probans having been defined as 'that which is always disconnected with the vipakes', a further qualifying emphasis is added in the form that the said 'disconnection' should be with the vipaksa only; this latter qualification excluding the 'too common' Probans, which subsists in the ripaksa also. Thus, even though a property that is connected as well as disconnected with the sapekia could be a real Probans, this fact does not militate against the emphasis that the Probans should be disconnected with the vipakya only. Even though it is true that it has nowhere been heard of or mentioned that a property subsisting in a part of sapakia is a valid Probans, yet when it is found that the validity of such a Probans is not precluded by the emphasis ' that which is disconnected with the vipakya only ', it may be taken as permitted ; and it is with a view to this ' unmentioned ' case that both the emphasised forms become useful.

+ The Opponent has urged that though the fact of the Probans subsisting in a part of the sapaksa being valid is not directly mentioned, it is yet taken as implied by the fact of its not being directly denied; and it is now urged that on exactly the same grounds we should accept the validity of such Probans as subsists only in a part of the Probandum; which is absurd.

excluded; while if the implication of the definition (in its emphasised forms) be taken, for the purpose of accomplishing what is desired by you, to be different from what it directly expresses, then, just as you get at what you desire (i. e. the validity of the Probans in the form 'being produced by effort'), you get also at what you do not desire-viz : the validity of the Probans in the form 'having odour'; and both-the exclusion of what is desired and the inclusion of what is not desired-constitute serious defects in the "What you have urged", says the Opponent, definition. "does not affect our position; since the Commentary has added a further qualification. The objection, that the definition includes the validity of such Probans as 'having odour', does not apply to the definition put forward by us; as the Commentary on the work that has proposed this definition has added the further qualification that the Probans should subsist in the Subject (which excludes that which subsists in only a part of the Sub-As a matter of fact, all that the adding of this ject)." further qualification does is to exclude such Probans as visibility' and the like, which do not at all subsist in the Subject, (Atom or Sound); and in what way does it exclude that which subsists in a part of the Subject? For certainly that which does subsist in a part of the Subject cannot be said to be not subsisting in the Subject; similarly that which subsists in a part of the Fipakea cannot be said to be non-subsisting in the Vipakes. Thus you will have to try some other method of excluding the undesirable contingency (of having to accept the validity of such Probans as 'having odour' and the "Certainly, no other method is necessary, the like). desired exclusion being got at by means of emphasis; that is, the Probans subsisting in a part of the Subject will be excluded by the emphasised implication (of the qualification 'that which subsists in the Subject ')." What is the precise form of that emphasis P Is it that it must subsist in

the Subject? or that it should subsist in the Subject only? "Well, we shall have it in the form that it must subsist in the Subject." Now what exactly is the force of (i. e. purpose served by) this emphasis? Does it indicate the possibility (of subsisting in the Subject)? Or does it preclude the impossibility (of the subsistence)? As a matter of fact, the emphasis cannuot be taken as serving either of these two purposes: as both, the indication of possibility and the preclu-

sion of impossibility, are got at even without the Vár. P. 130. said emphasis. Nor, lastly, is it possible for the emphasis to serve the purpose of excluding that which subsists only in a part of the Subject [even though it be admitted that it does exclude that which is absolut ly non-existent in the Subject]. Thus we conclude that the emphasis in question is entirely useless. "What the emphasis does is to indicate invariable concomitance,-the meaning being that the Probans must be subsistent in the Subject, and should never be n m-subsistent in it; and cortainly that which subsists in only a part of the Subject is non-subsistent also (and as such becomes excluded by the emphasis)." It is true that the emphasis excludes that which subsists in a part of the Subject; but even so, in seeking to remedy one evil you tumble into another, as follows :--- We grant that that which subsists in a part of the Subject becomes excluded; but in that case what is the use (in your definition) of the expression 'sapakse siddhe', 'being known to subsist in the Sapaksa'? "Why should this expression be omitted?" For the simple reason that the condition meant to be laid down by that expression is already fulfilled by the emphasis, which, according to you, denotes invariable concomitance; the fact that you put the emphasis in the form-'dharma Zoa ; aksaya', 'it must subsist in the pakea',--shows that the pakea is restricted, while the property subsisting therein is unrestricted [and hence standing in need of restriction by means of the emphasising particle *eva*, 'must']; and when the property is unrestricted--which means that there is an uncertainty about its concomitance being precise or too wide,—there is a possibility of its subsisting in the *sipakşa* as well as Sapakşa; and under the circumstances, the expression 'vipakşā nāsți', 'not subsisting in the Vipakşa', may be accepted as serving the purpose of precluding the possible subsistence in the Vipakşa; but what need is there of the expression 'sapakşā siddhā' 'subsisting in the Sapakşa' [this subsistence being, according to you, already indicated by the emphasised expression 'yo dharmāk pakşasya']?

If then, you put the emphasis somewhat differently—viz: that it must subsist in the Subject only,—even this involves the rejection of both the other expressions—' that it subsists in the Sapaksa ' and that 'it does not subsist in the Vipaksa'.

"How ?" That it should subsist in the Sapaksa has to be rejected in view of the emphasised form now proposed by you; -- it is absurd to say that it subsists in the Subject only and also that it should subsist in the Sapaksa; no one ever makes such an assertion as 'feed Devadatta only and also Yujňadatta'. Then as for the second expression, that it does not subsist in the Vipeksa, -this is superfluous, as this is already implied. "By what is this implied ?" By your emphasised declaration that it subsists in the Subject only; when you say that it subsists in the Sabject only, it certainly follows from this that it does not subsist in anything else; so that there is no need for adding that it should not subsist in the Vipaksa. Further, the qualitication that it subsists in the Subject only does not exclude that which subsists in a part only of the Subject; so that the emphasis fails in accomplishing that some purpose for which it has been proposed. If it be held that the expression 'subsisting in the Sapaksa ' is also added for the purpose of emphasising that it must subsist in the Sapakea and that it should subsist in the Sapakea only,-then we ask, what is it that you get at by means

Downloaded from https://www.holybooks.com

of this emphasis? If it implies mere possibility (of subsisting in the Sapaksa), then this possibility is got at even without the emphasis, by the simple unemphasised assertion that it subsists in the Sapaksa. If, on the other hand, it implies the invariable concomitance (of the Probans with the Sapaksa), then it comes to this that that which subsists in only a part of the Sapaksa is not a valid Probans. And further, the emphasised expression, it should subsist in the Sapaksa only, leads to the rejection of the other two expressions—'it subsists in the Subject' and 'it does not subsist in the Vipaksa';

Var. P. 131. Var. P. 131. the former, because it has to be rejected as it is contradicted by the emphasised expression 'it should subsist *in the Supaksa only*'; and the latter, because it becomes superfluous, on account of being already implied by the emphasised expression.

Lastly, if it be held that the expression 'not subsisting in the Vipakia' is also meant to be for the purpose of emphasis, then we ask-here also what is it that is em-"What is meant to be emphasised is that phasised ? it should be non-subsistent in the Vipaksa only and that it must be non-subsistent in the Vipakea." If the Probans be defined as that which is non-subsistent in the Vipakes only, then the Probans in the reasoning ' this is a cow because it has horns ' will have to be regarded as valid; as it is nonsubsistent only in the Vipakea [as all those animals that are hornless are also not-cours]. If, on the other hand, the Probans be defined as that which must be non-subsistent in the Vipaksa,---this also will not be right; as this will make the middle expression superfluous : of the three expressions, the first, ' subsisting in the Subject', is for the purpose of denoting invariable concomitance ;-the third, 'not subsisting in the Vipakea' is for the excluding of that which subsists in a part of the Vipakea ;---and what purpose would be served by the middle expression, 'subsisting in the Sapaksa'? If

it be held to serve the purpose of indicating mere *possibility*, as this would be already indicated by the invariable concomitance denoted by the first expression as interpreted by you, the adding of a separate expression would be entirely superfluous.

Thus then we find that when we come to examine the proposed definition as a whole, we find that it is open to the following objections:—it involves—(a) acceptance of the validity of the invalid Probans, (b) rejection of the validity of the valid Probans, and (c) the rejection of other things concomitant with what is desirable.

The definition that we have been considering is that ' the Probans is that which is disconnected with the Vipaksa'; now, if we come to examine this definition [i. e., the definition as applying to the Probans put forward for the proving of noneternality], from the standpoint of the Saufranfika (Bauddha) -we find that no 'Vipaksa' is possible fall things being non-eternal, there can be nothing where non-eternality is known to be absent]; and it therefore becomes incumbent on the propounder of the definition to explain \* what he means by the term ' Vipakea' in his definition; as for ourselves we do not understand the meaning of the term " Vipakia' when no such thing as 'Vipakia' is possible. Further, it is not possible to use the Ablative in connection with what does not exist; so that it also behaves you to explain the sense of the Ablative affix in the word 'Vipaksat'. Similarly, when the Vipaksa is non-existent, the Locative also cannot be applied to it; so that it is necessary for you to explain the sense of the Locative affix in the word 'Vipakee' in the expression 'Vipakea naeti' (which does not subsist in the Vipaksa). Then again, when no ' Vipaksa' is possible, and every Probans, as 'being a product' and

<sup>• &#</sup>x27;Even if there were some eternal things, which could be the 'Viputsa', it would be impossible for the Bauddha to explain or describe it; as for him everything is nirupdilys, inexplicable, indescribable '-- Tafparya.

the like (as proving eternality) is such as is always present in the Subject and the Supaksa, it becomes difficult to determine from what such Probans is to be 'disconnected' [so that 'disconnected with the Vipaksa' becomes an impossible qualification]. In fact the character of being a product is, under the circumstances, common to all, and as such it should be spoken of as 'sāmānya', 'present, concomitant', and not as 'Vishēşa', ' absent, non-concomitant, disconnected '!

\* The Baud line writer of the Commentary on the above definition of the Probans has declare i as follows :----

"A septenary being possible, when six become excluded, we get at the Probans with its three differentias, by rejecting one and two terms". This is not right; as there are two Probans possible which are characterised by what is expressed by two words only. What the above-quoted passage means is that the following septenary—seven definitions of the Probans—are possible—(1) that it should subsist in the Subject only, (2) it should be known to subsist in the Napaksa only, (3) it should be non-sub-

Vār : P. 132.

sistent in the *Vipakşa* only, (4) it should subsist in the Subject and be known to subsist in the *Sapakşa*, (5) it should subsist, in the Subject, and not subsist in the *Vipakşa*, (6) it should be known to subsist in the Sapakşa<sup>†</sup> and not subsist in the *Vipakşa*, and (7) while subsisting in the Subject, and also in the *Supakşa*, it should not subsist in the *Vipakşa*;—these seven definitions being possible, six are rejected, and the last one, with three terms is accepted as the true definition; which means that definitions with only one or

+ Both Editions read sapakse era '; but the Tatparya rightly reads ' sapakse cha '.

<sup>&</sup>lt;sup>e</sup>The footnote in both editions takes this as referring to the Väriika by Udyctakara himself. But this is not right. In the first place the words here put forward are not found in our Väriika dealing with the Säira defining the Probans ; and secondly the view is controverted here. The reference evidently is to a Bauddha writer who wrote a commentary on the definition of Probans propounded by Dinnaga, or some other later writer.

But this two terms are excluded as not admissible.\* entire exclusion (of definitions with only one or two terms) is not light; because as a matter of fact, there are several such valid Probans as are characterised by differentias expressed by only two terms. E. g. for one who (like the Bauddha) does not accept anything as eternal, the Probans being a product as also being a product of effort, are found to possess only the differentias expressed by two terms only [i.e. they subsist in the Subject, and they subsist also in the Sapaksa; the third condition of not subsisting in the Vipaksa is not possible; as for one who accepts nothing to be eternal, there can be no 'Vipakşa' in the case of a reasoning proving non-eternality]; and if the three-termed definition were the only one admissible, then both these valid Probans would have to be rejected ;-and further, the negative Probans, that we have in such reasonings as ' the living body is not without the Soul, as if it were so it would be without the life-breath &c.', will also

The rejection of the six &c., is thus explained by the Tatparya :- If the Probans be defined as that which subsists in the Subject only, then it would be the as add a range or singular Probans only that could be included in the definition ; - (2) if it be defined as that which subsists in the Sapaksa only, then in the proving of the horse being horned, the character of being a cow would be a true Probans ; --(3) if it be defined as that which is non-subsisting in the Vipakes only, the reasoning 'Sound is non-eternal because it is knowable ' would be a valid reasoning :---(4) if it be defined as that which subsists in the Subject and also in the Sapaksa, then the too wide and hence inconclusive character also would have to be accepted as a valid Probans : e. g. ' there must be smoke on the hill because there is fire ':-(5) if it be defined as that which subsists in the Subject and does not subsist in the Vipakas, the singular Probans would have to be accepted as valid ;--(6) if it be defined as that which subsists in the Sapaksa and does not subsist in the Vipaksa, then the reasoning 'the atom is non-eternal because it is a product' will have to be accepted as valid. So that the seventh definition is the only one that can be accepted; and this lays down three characteristics as necessary for the valid Probans.

What is put forward here as the seventh definition is the one that has been propounded by Dinnāga in his Nyāyapravēsha (Vide Medieval Logic, P. 91). c. f. also, Nyāyabindu—' The Probans has a threefold character—it must subsist in the Subject, it should subsist in the Sapakşa only, and it should never subsist in the Vipakşa.'

412-

have to be rejected as invalid; as this also has only two differentias [the character of *subsisting in the Sapakṣa* being in this case impossible, as there can be no living body without the life-breath].

Thus we find that when we come to examine the definition of Probans as 'that which is disconnected with the *Vipaka*', it either imparts the character of the valid Probans to that which is not really so,—or it excludes that which is really so,—or it contradicts authoritative treatises, and thus militates against scriptural tenets.

Others (e.g. Dinnāga, says the *Tālparya*) have proposed the following definition of the Probans:—"It is that which subsists in the *Supaksa* in two ways, and which does not subsist in its contrary; that is to say, that which subsists in two ways in that which is homogeneous to the Subject—[i. e. (1) entirely subsisting in all Sapaksas, e.g. the character of being a product as proving non-eternality, and (2) partially—subsisting in some Sapaksa, e. g. the character of being produced by effort as proving the same]—and which does not subsist in its contrary i. e. in the Vipaksa. This definition supplies an adequate description of the Probans with all its three characteristics [(1) subsisting in the Subject, (2) subsisting in the Sapaksa, and (3) not subsisting in the Vipaksa]."\*

As a matter of fact however, the definition, as it stands, does not describe the Probans with its three necessary characteristics. If the definition stands as you have put it, which word is there to indicate that the Probans should sub-

<sup>•</sup> The Medieval Logic gives a chart of the 'Wheel of Reason', where nine possible forms of the Probans as proving non-eternality are put forward; out of which only two are selected as valid—being a product, which subsists in all non-eternal things, in all Sapakşas, and being produced by effort, which subsists in a few non-eternal things, not in all. The Medieval Logic does not mention Diùnaga's definition as here put forward; but the Tatparya makes a quotation from Diùnaga's work.

sist in the Subject? "It has been declared by us that almost every Probans, valid and invalid alike, must subsist in the Subject." True, this assertion has been made by you; but even this assertion does not mean that it is only what subsists in the Subject that can be a Probans; all that it means is that what does not subsist in the Subject is not a Probans, either valid or invalid. "But this is certainly got at by implication; when the words of the declaration are construed to mean that what does not subsist in the Subject cannot be a Probans, either or invalid, it is certainly implied that the Probans, valid as well as invalid, must subsist in the Subject."

It is true that the idea that it should subsist in the Subject is got by implication; but there is nothing to imply the necessary and invariable character of this subsistence [ i. e. there is nothing to imply that every Probans must subsist in the Subject]; all that the sentence means is that what does not subsist in the Subject cannot be a Probans; and all that this can imply is the more *possibility* (of every Probans subsisting in the Subject); and possibility is twofold; it may be necessary and invariable [i, e. universal, which would mean that every Probans must subsist in the Subject only], or not necessary and invariable [which would mean that it may subsist in the Subject, and also in the Vipaksa]; and [if you rested with the assertion of this twofold possibility] this would imply that even that undesirable Probans will have to be accepted as true which does not necessarily subsist in the "The validity of such a Probans whole of the Subject. is certainly not implied; when it is distinctly stated that the

Vår. P. 133,

Probans must subsist in the Subject, that alone

comes to be implied as the true Probans which must subsist in the Subject; and certainly that which subsists in only a part of the Subject, cannot be said to be one that *must* subsist in it." This is not right; as the emphasis [involved in the assertion that the Probans must subsist in Subject] has been held by you to serve an entirely different

purpose; as a matter of fact you put forward this emphasis for a wholly different purpose; you put it for the purpose of restricting the scope of the valid and invalid Probans [i.c. for the purpose of indicating what can be regarded as Probans, valid or invalid]; and when it is held to serve this purpose, how can it serve the purpose of excluding that (Probans) which does not subsist in the whole of the Subject? " But the emphasis could very well serve both purposes : it could exclude the partially subsisting Probans as well as restrict the scope of the valid and invalid Probans." In that case you should not have the words 'which subsists in two ways " Why so?" in that which is homogeneous to the Subject.' For the simple reason that when the pervisive (universal) and necessary character of the subsistence of the Probans in the Subject is got at by means of the emphasis in question, it means that the Subject as well as the property subsisting in it (as the Probans) are both strictly restricted; and it is only when there is no such restriction with regard to a property that there is a twofold possibility of its subsisting (1) in the Sapaksa and (3) in the Vipaksa; and as the definition would otherwise become applicable to the undesirable Probans also. it is necessary to add the qualification that it should not subsist in the Vipaksa; but why add the qualification that it should subsist in the Supaken ? If it is for the purpose of indicating the possibility (of its subsisting in the Sapaksa),-then our answer is that this indication of mere possibility would keep it unrestricted; as a matter of fact, mere possibility of subsistence would imply both entire and partial subsistence; and under the circumstances, what would be the use of having these words (of too wide connotation) [when, according to you, the duly restricted entire subsistence is implied by the emphasis)? In any case the phrase 'in two ways' should not be inserted in the definition at all; as this qualification is already implied in the qualification 'subsisting in the Sapaksa', it need not be re-iterated (by means of a separate phrase);

in fact the word 'subsisting' signifying equally both kinds of subsistence, partial and entire, the addition of the phrase 'in two ways' savours of senselessness.

It might be argued that-" the phrase 'subsisting in the Sapaksa' is added for the purposes of emphasis; and certainly the addition of a phrase for that purpose is quite proper." But as a matter of fact, the emphasising itself is not right. If the emphasis means that the Probans "How so ?" must be always subsisting in the Sapaksa, then for you the character of being produced by effort will not be a valid Probans (for proving non-eternality); as the character of being proluced by effort is both subsisting and non-subsisting in the Sapaksa (being present in some and not present in other non-eternal things); and as such it is excluded by your emphasised qualification; for certainly there can be no such reasonable assertion as feed the Brahmang only, and the Ksattriya also '. . If, on the other hand, you put the emphasis the other way and hold that the Probans should subsist in the Sapaksa only, then this leads to the rejection of the other two qualifications; one of them being actually contrary to the sense of the emphasised qualification, and the other being already implied in the latter.\*

If, lastly, you lay your emphasis on the phrase 'in two ways',—here also we ask,—what is the meaning of the emphasis? Does it mean that the twofold subsistence is in the Sapaksa only, or that it should subsist in the Sapaksa in two ways only? If it be meant that it should subsist in two ways in the Sapaksa only, and in nothing else—that the twofoldness

Var. P. 134.

does not pertain either to any other Paksa or to the Vipaksa, - then clearly, you should not

<sup>•</sup> There are three characteristics of the Probans-(1) that it should subsist in the Sapakşa, (2) that it should subsist in the Subject, and (3) that it should not subsist in the Vipakşa. If then, it is meant that it should subsist in the Sapakşa only, then this excludes that which subsists in the Subject also; and as for non-subsistence in the Vipakşa, this would be implied in the qualification that it should subsist in the Sapakşa only.

have the words 'subsisting in the Sapaksa'; as this subsistence is already implied ex hypothesi by the emphasis laid upon the phrase 'in two ways'; and as for the possibility of the subsistence in the Sapaksa, this also is already implied by the very first qualification (that it should subsist in the Subject) ;then again, when you have the phrase 'in two ways', and this phrase precludes, as you have just declared, the two-foldness of the subsistence in another Subject and that of non-subsistence in the Vipaksa, \*- then this phrase itself implies the possiblity of subsistence in the Sapakaa; so that in any case the qualification 'subsisting in the Sapaksa' becomes entirely superfluous. And lastly, the emphasis of the fact that it should subsist in two ways in the Sipaksa only implies its subsistence in the Subject also [specially as every Probans, valid or invalid, must, by its very nature, subsist in the Subject,-according to the Bauddha logician, Dinnāga]; so that there is no need for emphasising the fact that the Probans must subsist in the Subject,-an emphasis which you have put forward for the purpose indicating the invariable concomitance of the " In order to avoid the absurd contingency of two. having to reject the emphasising of every other word of the phasised qualification that the twofold subsistence should he in the Sapaksa only." But even so, the two middle expressions. [(1) 'subsisting in the Supaksa', and (2) 'in two ways'] of your definition should be rejected; and this throws you into the same predicament in which the man fell who, in trying to relieve himself of his goitre by pushing it in, managed to have his eye-bells thrown out! † If then you put the emphasis upon the

<sup>• &#</sup>x27;Anyapada' has been explained by the Tatparya as anys pads yayoh (things expressed by two other words), i. e. pateasaftva and vipakedeffva.

<sup>†</sup> This 'nyāya' or maxim is not explained in the Commentaries. The Chaukhambha edition reads 'grik-pravšeha & .. '; but 'gadupravšeha ' gives botter sense.

phrase 'in two ways' in another way, explaining it to mean that the Probans would subsist in the Sapaksa in two ways only,—then for you such universal Probans as being a product and the like would not be valid! As such characters do not subsist in two ways only [as it subsists in non-eternal things in only one way, i. e., in their entirety, never only in some, but always in all non-eternal things].

Further, in now propounding a definition with three terms you exclude the Probans which fulfils only two conditions, and which you have accepted to be valid in your philosophy (vide Text, p. 128). The Negative Probans also, under your definition, ceases to be a true Probans subsist in the Sapaksa in two fas it does not ways]. If it be argued that the Negative Probans is really not a true Probans, then we ask-why has the Bauddha philosopher made a great effort to establish the validity of the negative Probans? [And inasmuch as he has actually done so, it cannot be right for him to argue now that it is not a true Probans¶.

If, in order to avoid all these difficulties, you do not lay any emphasis on any term of your definition, then you include also such Probans as subsist in only a part of the Subject, and also that which is inconclusive [not being invariably concomitant with the Probandum, being non-subsistent in things other than the *Vipakşa* also].

The above arguments also serve to demolish the definition propounded by Dinnāga in another work of his, \* which is as follows :---

"The Probans is that which subsists in the Subject and is invariably concomitant with a part of it [i. e. with the Probandum in general]." Specially because, as the definition stands, it includes also that which does not extend over the whole of the Subject; and as such has already been criticised and rejected.

• The J'diparya calls this ' dinnagosya pradoshanjaralaksanam'.

Reverting again to Dinnaga's former definition, we find that the term 'asan fadatyayê is exactly similar 'to the 'vipaksê nāsți' of a previous definition [and as such, is open to all those objections that we have urged against this last, on Text, P. 180, L. 13 et eeq.]

Other writers (Bauddhas) have proposed the following definition—" Tādrigavinābhāvidharmopadarshanam hētuh—the Probans is that which is indicative of the presence of a character which is never apart from like things. Here the term 'which is never apart from like things' indicates the two characteristics of not subsisting in the Vipaksa and of subsisting in the Sapaksa, and the term 'indicative of the presence' denotes presence in the Subject; and thus we get the Probans \* with its three characteristic features."

The upholders of this last definition have held that the term ' which is never apart from like things ' indicates subsistence in the Sapaksa and non-subsistence in the Vipaksa. But this is not right; it is true that the words, 'which does not subsist apart from like things' indicate that it does not subsist in the Vipaksa; but in what way does it indicate that it subsists in the Supaksa? Certainly when a character does not subsist in the Vipakea, it does not necessarily follow that it must subsist in the Supaksa. And (if this is Var. P. 135. not indicated by any term in the definition) audibility also would be a true Probans (in proving non-eternality of Sound)! As audibility the never aubsista apart from non-eternal things fand the only condition that excludes such singular Probans. -viz: that it should subsist in the Sapaksa-is absent from the definition]. But we shall grant (for the sake of argument), that the term 'subsisting not apart from like things'

<sup>•</sup> The Täiparya says pakadharma ityanina hitorabhidhinam, tina tilakaunapravibhavifaima hituh ityarthah. From this it is clear that in place of 'paleah' we should read 'pakeadhas mab.'

does indicate subsistence in like things (i. e. subsistence in the Supaksa); but even so what is there to indicate that the Probans should subsist in the Subject itself? "That is indicated by the term 'upadarshana'". Certainly it cannot be indicated by that word; as the word 'upudarshana' denotes only mention or indication; as a inatter of fact, the word 'upadarshana', which is explained as 'upadarshyafe anena,' only means ' that by which things are indicated '. i. e. the indicative; and certainly it has no power to imply that it is indicative of presence in the Subject or anywhere "But (if it is not indicative of presence in the Subelse. ject) wherein else could the presence be of which it would be indicative ?" Wherever there might be a possibility of its presence. "Where is there such possibility ?" Certainly in the Sapakaa ;- thus then, the meaning of the defini. tion comes to be-'the Probans is that which is indicative of the presence, in the Sapaksa, of a character which is never apart from the 'Sapakea'\*; and under this definition visibility would be a valid Probans (for the proving of non-eternality of sound); as visibility, according to the Bauddha, never subsists apart from non-eternal things; [as for him there is no such eternal generality as 'rupalva'; and according to the definition subsistence in the Sapaksa being the only condition, the absence of visibility in Sound would not matter]. For the sake of argument we shall grant that your 'indicative ' does indicate the presence in the Subject of the character which is never apart from the Sapaksa'. But even so, by what means do you exclude that Probans which subsists in a part only of the Sub-"That also is done by the same word 'indicative '. iect. upadarshana". That cannot be ; as all that that word denotes is mere possibility (of subsistence in the Subject). If you think that the word 'upadarshana' denotes sub-

<sup>&</sup>quot;Both editions read ' ubhidhanahetuh '; but the correct reading apparently is ' abhidhanam hetuh.

sistence in the whole of the Subject,—then you are sadly mistaken; as the word 'upadarshana' denotes mere possibility; only the possibility of subsistence in the Subject is denoted by the word; and it does not indicate anything as to subsistence in the whole of the Subject [and until this is done the partially subsisting Probans cannot be excluded]. If, by some stroke of reasoning, recourse be had to emphasising (certain terms, with a view to get what is necessary), none of these would be capable of excluding the partial Probans; so that the objection against the definition would remain in force as before.

propounders of this last definition The have cited two examples of the Probans-(a) the character of being produced by effort as proving non-eternality, and (b) Smoke as proving fire. Now, as regards (b), it has already been declared that Smoke does not prove fire [this has been declared by the Varlika itself, on p. 59, l. 14, and also by Dinnāga in his Pramāņasamuchchaya, quoted is Medieval Logic, P. 87]. And as regards (a), the character of being produced by effort cannot be a Probans (in proving the noneternality of Sound). "Why so?" For the simple reason that the said character of being produced by effort does not subsist in the Subject (Sound); as a matter of fact, being produced by effort is not a property of Sound ; there is no Sound that is produced by effort,-every Sound being produced by conjunctions and disjunctions.\* It may be that (though not the immediate and direct cause of Sound) effort is certainly the indirect cause of Sound [the contact of the vocal chords, for instance, being due to the Effort put forth by the speaker]; but in that way all things may be said to be the

<sup>•</sup> When a man speaks, what produces the Sound, is the contact and separation of the wind thrown out of the throat with the vocal chords : and so in every case the immediate cause of Sound consists in the waves of air coming into contact with something ; Sound is produced by disjunction in the case of the Sound proceeding from the splitting of the bamboo.

indirect cause of Sound! So that it is futile to have any such specification as 'produced by effort'; the reasoning may be put forward simply as-'Sound is non-eternal, because it is produced.'

### Vär. p. 186.

Then again, when you put forward, in proof of the non-eternality of Sound, the

character of being produced by effort, expressing this latter by means of the abstract noun 'prayainaniariyakaiva'-what does the abstract noun (anantariyakatva) mean? (a) Does it mean production ? (b) Ur perception ? (a) If it means production, then that alone would be enough to prove non-eternality\*; and it is needless to put forward the term as ' being produced by effort'; certainly it is no use putting up the reasoning in the form 'Sound is non-eternal because it is a product of Devada (ta' fit being enough to say that it is a product ]: so that your reasoning should be in the form ' because it is produced' (and the qualifing phase 'by effort' becomes superfluous]. If 'being produced' were not invariably concomitant with non-elernality (and as such failed to prove it conclusively), then alone would it have served a useful purpose to add the qualification 'by effort'. As in the case of every Probans, it is necessary to add qualifications only if, in the unqualified form, it is found to be inconclusive or too wide. (b) If on the other-hand, perception is what you mean by the abstract term 'Anantariyakatva'. then also, this perception alone would have the required capacity (of proving non-eternality); and in this case also the qualification ('by effort') would be superfluous. As things perceived are not of two kinds-eternal and non-eternal (as according to the Bauddha nothing is eternal); nor are they of two kinds-perceived after effort and not-perceived after effort. "You will perhaps

 Both editions read 'prayafninanfar yaka'; The Täfparya reads 'proyafninanfa-rama dc.'; this latter gives better sense.

<sup>•</sup> Both editions read 'fannaiva'; this is incompatible with what follows; the reading should be 'ladies'.

argue that the generality 'ghata/va' is eternal, and it is also perceived after effort." But you yourself have denied this (by holding that there such ara no eternal generalities as 'ghatatoa' and the like). Thus the conclusion is that in the proving of the non-eternality of Sound, 'prayainānaniarīyakaiva' cannot serve as a valid Probans. Further, the character of being produced by effort is also not invariably concomitant with the Subject; and the term 'Sound' which is the Subject of the reasoning in question, includes all Sounds (and all sounds are not produced by effort). If, then, you put forward the reasoning as referring to a particular Sound (and not to all Sounds), -thus also the Probans, being produced by effort, would apply only to the first sound-unit, and not to the endless sound-units that follow each sound-unit; so that the fact remains that the Probans does not subsist in the whole Subject. It may be urged that "that particular sound which is produced by effort is certainly nonelernal," True; but in that case, for your Probans you must have something other (than the character of being produced); as the true Probans should subsist in the whole of the Subject

## (which being produced by effort does not do).

The sense is that if there were things perceived after effort and things not perceived after effort, then alone would the qualification 'after effort' have had any use; as it is, all things are perceived only after effort.

nor can it be spoken of as 'not produced by effort'; as this term speaks of the character of being due to effort as qualifying, 'production'; the term meaning 'that whose production is due to effort'; and as there is no 'production' of Akāsha, you cannot speak of it either as 'not produced by effort,' or as 'produced by effort.' This same reasoning holds gool regarding the case of Negation also; as negation Var. P. 137.

by effort' or as ' not produced by effort.' Thus then, all other proposed definitions of the Probans

having been found to be defective, we must accept that which has been propounded by the sage Gautama.

# THE STATEMENT OF THE EXAMPLE.

Sūļrā (36),

THAT FAMILIAR INSTANCE, --- WHICH, THROUGH SIMILABITY TO WHAT IS TO BE PROVED (*i. e.* THE SUBJECT), IS POSSESSED OF A PROPERTY OF THAT (SUBJECT)---CONSTITUTES THE 'STATEMENT OF THE EXAMPLE.'

424

### Вназул он Sc. (86).

### [P. 41, L. 9 to P. 42, L. 6.]

\* Similarity to what is be proved' consists in the presence of the same property in both; when by reason of this similarity, the familiar instance is found to be possessed of a character of that same,-i. e., the character of what is to be proved. "What is to be proved ' is of two kinds-(a) in some cases it is the property as qualified by (belonging to) the object ;---as when we assert the 'non-eternality of Sound'; and (2) in others it is the object as qualified by the property, as when we assert that 'sound is non-eternal'; and it is this latter that is referred to by the pronoun 'tat' [in the compound taddharmabhāvi] (in the Sutra) [and not the probandum, which is what is usually spoken of as 'sadhya']. "How do you know that it is this latter that is meant by the word 'sadhya' For the simple reason that we find the 'property', here ?" 'dharma', mentioned separately from 'that', 'tat' [so that 'tat' and 'dharma' could not be the same ]; the word ' taddhamabhāvī ' means ' that which has the bhāva or presence of the dharma or property of 'fat' or 'that'; that is to say, that familiar instance which is possessed of a property that belongs also to the Subject; and it is such an instance which can be spoken of as 'possessed of a property Bhūsya, P. 42. of the subject', in virtue of its similarity to For instance, in the reasoning 'sound is nonthat Subject. eternal, because it has the character of being produced', what the probans, 'being produced', means is that being produced, it ceases to be,-i. e. loses itself,-i. e. is destroyed; here we find that being produced is meant to be the means of proving (i.e. the probans) and being non-eternal is what is proved (the probandum); and the notion that there is the relation of means and object between the two properties can arise only when the two are found to co-exist in any one thing ; and it arises only by reason of the 'similarity' (of a number of things in every one of which the two properties are found

• The wording of this Sâfra is not clear. The meaning is clear enough—that is the right example which possesses two properties in common with the Subject,—one property whose presence in the Subject is to be proved, and the other that which is already known to subsist in it. But the difficulty arises from the presence of the word 'sidhya in the Sütra. Ordinarily this word stands for the probandum, that whose presence in the Subject is to be proved; that the word cannot mean this in the present Sütra is made clear in the 'I'drfika. The translation has adopted the explanation to co-exist); so that when one has perceived the said relation in the familiar instance, he naturally infers the same in the Sound also; —the form of the inference being 'Sound also is non-eternal, because it has the character of being produced, just like such things as the dish, the cup and like'. And this is called 'Statement of the Example', 'uddharana', because it is what is the means of establishing, between the two properties, of the relation of means and object.

# Vārțika on Sū. (36.)

# [P. 137, L. 4 to P. 138, L. 4.)

There is yet another difficulty ;--uddarana, as a factor of reasoning, is a verbal etatement; how can a familiar instance, which is an object possessing certain properties, be called a 'statement'? This difficulty has been sought to be cleared by the Vartika. (See below).

The translator has adopted the interpretation of the Vartika and the Bhdsyg. But the Satra is capable of a much simpler interpretationsādhyska (dharmiņa ani{yatvina) sādhāranyāt (sāmānādhikaranyāt, sādhyasamānādhikaraņem dhermāntara nufpaffidharmakaļvamavalambya) faddkarmatkīvī (sadhyadharmayan); -translated thus -' That familiar instance which, possessing a property that is known to be co-existent or concomitant with the probandum, possesses also the probandum.' The Bhdays, the Vartika and the Talparys appear to have been led away by the impossibility of there b ing any ' Sidharmya' (similarity) between the Instance (which is an object, a *dearmin*) and the Probandum (which is a property, a dharma). But the Bhasya itself (p. 42, ll. 2-3) affords an explanation which shows that ' sadharmya' means 'concomitance in a single substratum ', and not similarity; and that this concomitance is between the two properties-e.g. non-sternality ' (probandum) and ' being produced ', both of which, known to be concomitant, should subsist in the Instance.

+ And it cannot be regarded as actually pointing out the form of that Statement ; as the statement must be verbal; and as such it cannot be defined as the familiar instance.

The term 'sādhyasādharmya' means 'similarity to what is to be proved '; this also implies two emphasised restrictions-viz. (1) that the similarity should be only to what is be proved, and not to what is contrary to what is to be proved, and (2) that to what is to be proved there should be similarity only, and not dissimilarity also; \* both these restrictions should be taken as implied by the term, inasmuch as by reason of the said 'similarity' the 'familiar instance' comes to be possessed of 'a property of the subject.' " Is there any similarity to what is to be proved by which the Instance becomes not possessed of a property of the subject? [And inasmuch as the term 'similarity to what is to be proved', would imply the possession of the property of the Subject also, the adding of this last term to the definition is entirely superfluous, and it is also needless to have recourse to any emphatic restriction.]" Certainly it does become not possessed of the property of the Subject; e.g. when action (motion) is cited as an instance to prove the eternality of sound on the ground of its incorporeality. + For these reasons we conclude that what is meant is that instance which comes to possess a property of the Subject, by reason of its ' similarity to what is to be proved '; and this is what is meant by the term 'taddharmabhāvī'. A familiar instance, such as above described, which becomes qualified by the character of being 'possessed of the property of the Subject' by virtue of its 'similarity to what is to be proved,' constitutes the 'State-

So what is put forward in the Sūţra is a definition, not of the statement, but of that which the Statement speaks of.'-Tapparya. See Vārfika below. The Parishuddhs adds that as even this indirect description suffices to give an idea of what the Uddharana is, no exception can be reasonably taken to the Sūţra.

• The first restriction precludes the 'too-wide' character, which is similar to eternal as well as non-eternal things; and the second precludes the *partial* character, which is partly similar and party dissimilar.—*Tāfparya*.

† In the reasoning 'Sound is eternal, because it is incorporeal, like action', action has certainly this 'similarity' to Sound that both are 'incorporeal'; but even with this similarity,' Action is not possessed of *eternality*, which is the 'property of the Subject', which should be present in the Instance. And this becomes excluded by the ment of the Example'; this has been called 'Udaharana', because the relation, between the two properties, of being the means of proving and the proved, is indicated by it [udahriya-[@an@na].

"Well, if the *lyut* affix in the word '*udāharaņa*' has, as you say, the sense of the Instrumental, the *udāharaņa* should be in the form of a verbal expression; so that the 'Instance' being an *object*, it is not right to speak of the two as in apposition to each other [the Sūţra speaks of the 'familiar instance' as the '*Statement* of Example'; and certainly an *object* cannot be spoken of as a *statement*]; for instance, the verbal expression 'having horus' can never be in apposition to the *cor.*"

This objection has no force at all; as what the Sūtra does is to mention the 'familiar instance' as a qualification of the 'statement'; it certainly does not mean that the Instance, by itself, constitutes the 'Statement of the Example'; what it means is that when the familiar instance is stated as being 'possessed of the property of the Subject' by virtue of its 'similarity to what is to be proved', we have the 'Statement of the Example.'

The term '*faddharmabhāvi*' is to be explained in the following manner: '*Taddharmah*'=the property of that, i.e., of what is to be proved; and 'what is to be proved' is of two kinds, it is a property and it is also an object; in one case

• It is interesting to note that with regard to Variika, lines 7-12, the Parishuddhs remarks that 'no one agrees with what the Variika has said here ;.....and very little useful purpose is served by it.'

† The 'Statement of the Example' is that in which it is shown that by virtue of its 'similarity to what is to be proved,' the Instance is 'presented of a property of the Subject'; that is there is invariable concomitance between the similarity (which in the case of the reasoning 'Sound is non-sternal, because it is a product, like the jar,' consists in being a product) and the 'property of the Subject' (non-sternality).

428

term '*taddharmabhasi*', and also by the restriction that there should be *similarity* to the Sādhya only; as the 'incorporeality' forms a similarity not to Sound only, but to many other things also, eternal and non-eternal alike.

(the former) it is the object that forms the qualifying factor, and in the other it is the *property* that is the qualifying factor; and in the present case, 'that' should be taken as standing for the object; for the simple reason that the *property* is mentioned separately by itself<sup>\*</sup>; that is to say, the properties of being a product, &c., belong to the object, and not to the *property*. And further, if *property* were meant here to be 'what is to be proved,' then it would be absurd to speak of the 'similarity' of the Instance to it; for certainly there can be no 'similarity' between the *property* and the *instance*; as a matter of fact, the 'similarity to what is to be proved of the Instance must be to an object only; and the final Reassertion also must refer to the object.—For these reasons the

Var. P. 138. Var. P. 138. term ' what is to be proved' must here stand for the object (i. e. the subject of the syllogism); and the Example is that instance which (while being similar, &c. &c.) possesses that property whose existence is to be proved in the Subject. Such an Example (in the case of proving the non-eternality of sound) we have in the shape of such objects as the Dish and the like, all which have the character of being produced and are found to be non-eternal.

# Sūţra (37).

AND THE OTHER KIND OF 'STATEMENT OF EX-AMPLE' IS THAT WHICH IS CONTBARY TO WHAT HAS BEEN DESCRIBED IN THE FOREGOING SCTEA.

Виляча.

# [P. 42, L. 8 to P. 43, L. 8].

What is meant to be described is that 'familiar instance which constitutes the Statement of Example'; so that what the Sūţra means is that the other kind of Statement of the (heterogeneous) Example consists in that familiar instance which, through dissimilarity to what is to be proved, is not possessed of a property of that Subject. E. g. 'Sound is noneternal, because it has the character of being produced,—

<sup>.</sup> Both editions read w www. but the w is superfluous.

everything not having the character of being produced is eternal, for instance, the Soul and the rest';—here 'Soul and the rest' constitute the required 'familiar instance,' which, through their 'dissimilarity to what is to be proved '—i.e. on account of their not having the character of being produced,—are not 'possessed of the property of the subject,'—i.e. the property of non-eternality. When we find that in the case of the Soul, the character of being produced being absent<sup>®</sup>, it does not possess non-eternality, we infer the contrary in the case of Sound,— 'because Sound is possessed of the character of being produced, Sound is non-eternal'.<sup>†</sup>

When the Probans is stated with a view to similarity i. e. in the affirmative form,—what constitutes the Statement of the Example is that familiar instance which, through its similarity to what is to be proved, is possessed of a property of the Subject; and when the Probans is stated with a view to dissimilarity,—i. e. in the negative form—the Statement of the Example consists of that familiar instance which, through its dissimilarity to what is to be proved,

• The reading 'sya-bhāvāt is wrong ; the correct reading given in the Puri Ms. is 'syābhārāt.'

† The Tatparya takes exception to the example cited in the Bhasya: -" Both the examples cited in the Bhaya-that of the Homogeneous Example as well as that of the Hoterogeneous Example—are those of the 'affirmative-negative' kind ; and in the latter case it has declared that the absence of the property to be proved is due to the absence of the character which proves it; and this is not right, as in the case of the 'affirmative-negative' reasoning, even though a heterogeneous Example be available, the right course is always to cite the homogeneous Example ; as the dissimilarity of a thing is recognized always after its similarity; so that it is not right to have recourse to the roundabout way when a straight road is available for the same This contention appears to be favoured by the Vartika also, which says purpose". that an instance of the heterogeneous example is to be found cited in connection with the 'Negative' reasoning. The instance that the Talparya would have is found in the following reasoning-'The living is body with Soul because otherwise it would be without the life-breath,-like the jar', where the ' property' of the Subject—the living body—having the life-breath—is not present in the jar. What the Bhasya itself proceeds to explain in the next sentence shows that the instance cited cannot be the right one; if it is true that ' when the probans is stated affirmatively. the example cited should be homogeneous ', then in the case of the reasoning 'Sound is non-eternal, because it has the character of being produced.'-where the probans is stated affirmatively-the right example could not be the heterogeneous one; while if the reasoning is put forward in the form 'the living is body is with Soul, as otherwise it would be without the life-breath '-where the probans is stated negativelywe would have the heterogeneous example of the jar as cited by the Talparya.

does not possess the property of the Subject. In the former case, the observer perceives, in the Instance, that it possesses two properties so related that the presence of one proves the presence of the other, and from this he comes to infer that in the case of the Subject also the presence of one should prove the presence of the other; —and in the latter case he observes in regard to the Instance that there are two properties so related that the absence of one proves the absence of another, and from this he comes to infer that in the case of the Subject also the said properties are similarly related, the absence of one proving the absence of the other.

This process (of corroboration by means of familiar instances) is not possible in the case of fallacious Probaus; and it is for this reason that they are regarded as 'fallacious', as not true probans. The subject of this related capacity of the Probans and the Example is very subtle and difficult to grasp; it can be rightly understood only by exceptionally wise and learned men.

### Vartika on Sūtrā (37).

## [P. 138, L. 6 to P. 140, L. 1.]

The full definition intended by the Sūtra is that the 'Statement of the Heterogenous Example' consists of that familiar instance which, through its dissimilarity to what is to be proved, does not possess the property of the Subject.' An instance of this second kind of Example should be found in connection with the negative Probans (above).

[The Varies proceeds to discuss the several emendations that have been proposed in the reading of the last two Suiras]—Some people would read Sutra (36) as—'sudhyasudharmyūi taddharmabhūvijvam dristāniasya udūharaņam;and their motive in proposing this change is that thisreading [which gives the sense that 'the Statementof the Example is that character of the Instance whichconsists in its being similar to what is to be proved and whichpossess the property of the subject'] precludes the absurdity(apparent in the reading generally adopted) of the identification of the Instance (which is a material object) with the Statement of the Example (which is purely verbal). When questioned as to the exact meaning of the expression 'faddharmabhāvifvam', 'the character of possessing the property of the Subject,' they explain that—the said 'character' consists in the connection of the character to be proved (the probandum) and the character that proves it (the probans); i. e. the instance is said to ' possess the property of the Subject' when it is connected with the probandum and the probans; hence what the abstract noun 'faddharmabhāvifvam' denotes is the co-existence (concomitance) of the probans and the probandum.

Others have found fault with this reading of the Sufra<sup>•</sup>. But as we do not accept this reading, the objection urged against it does not concern us.

The Opponent argues—" Even in your own reading of the Sūfra (as read by Gautama himself), there is this flaw that the term 'bhāvī' (in the compound 'taddharmabhāvi') is entirely superfluous; as every one of the factors (of reasoning) is (by its very nature) the bhāvī of 'what is to be proved'; the meaning of the term 'bhāvī' being 'bhāvayați', 'that which indicates '; and certainly every one of the factors is indicative of what is to be proved."

Our answer to this argument is that the interpretation of the term '*bhāvī*' that is here criticised does not represent our view of the meaning of the *Sūfra* [so that we need not concern ourselves with it].

Some writers object to the term '*faddharmabhāvī*' on other grounds. This is how they argue :--- "The exact denotation of the term '*faddharmabhāvī*' may be explained on the analogy, either of the term '*uṣṇabhojī*', or of the term '*dandi*';

if it is explained on the analogy of the former, then as the word 'uṣṇabhoji', is explained as 'uṣṇam bhok/um shilam yasya',—one who is in the habit of eating hot food',—the term '{addharmabhavi' would mean '{addharmam bhāvayi/um shilam yasya', where the word 'bhāvayi/um' would be synonymous with 'gamayi/um', and the term would mean ' that which is in the habit of indicating the property of the subject'; and this, the Vārțika has just declared, is not what is meant by the author of the Sā/ra; so that this explanation does not call for any remarks. As for the term 'daṇdi', this means 'daṇdam yasya asți' ' one who possesses the stick'; so that on the analogy of this, the term 'faddharmabhāvī' would mean 'faddharmabhāvāh yasya asți'; and under this explanation, the term 'bhāvī' would be entirely superfluous; as the only

Vâr : P. 139.

way in which you would expound the compound. ' faddharmabhāvī' would be

as follows—*iaddharmashcha asau bhāvashchāţī faddharmabhāva}*, sa yasya as*ii*; and for the expression of the qualified relation meant to be conveyed by means of this, the form '*faddharmabhāvī*' should be justifiable only if it were not possible for that relation to be expressed by means of a simpler word. As a matter of fact, however, we find that it is not possible ior a property to be a '*faddharma*' and, at the same time, an '*abhāva*'; and it is only if this were possible that the qualifying term '*bhāva*' would be necessary in connection with '*faddharma*'. Thus then (the term '*bhāva*' being entirely superfluous), you should have the term '*faddharmi*' [which would mean 'that which possesses the property of the Subject', which is all that is required]."

Our reply to the above criticism is that it would not be right to have the term in the form '*faddharmi*', in the sense of possessing the property of the Subject; as the possession of the property of a thing is of both kinds; that is, properties are of two kinds—those that are affirmed and those that are denied; and in the affirmative reasoning the familiar instance

is one which possesses the property that is affirmed; c. g. in the reasoning 'Sound is non-eternal because it has the character of being a product', it is found that the Dish is a familiar instance in regard to which the presence of the two properties of being a product and non-eternality are affirmed; so that it is only right to have the word in the form 'taddharma bhavi'. and explain it as that which possesses the property in its positive form, the correlation being explained as taddharmashcha asau bhāvashcha. Then again, we do not understand how we could have the term in the form 'taddharmi'; as a matter of fact, in a case where the Bahuvrihi compound is possible, there is no room for the possessive affix (ini);\* so that if we have to be advised at all we should be advised to have the form 'taddharmā' (a Bahuvrihi compound). Further, there are some people (the Bauddhas for instance) who hold that such properties as being produced and non-eternality (in fact, all things) are more negations [according to the Bauddha everything is apoha, a negation of its contrary]; and with a view to reject their view it is necessary to emphasise, by means of the word 'bhāva', the fact of the positive character of the properties.

A Bauddha logician, Subandhu<sup>†</sup>, has made the remark that "*Pratijän* and the other two factors of reasoning have been badly confounded by the definitions provided by Gautama." We have seen however that every one of the three Factors has been very correctly defined; so that by declaring that they have been' badly confounded', the writer has only given proof of his being a mighty logician !

<sup>•</sup> The idea meant to be expressed is that which possesses the property of that; and this is more easily expressed by the Bahuvrihi compound 'faddharma' than by means of the form 'faddharmi', which necessitates the adding of the possessive affix 'ini.'

<sup>†</sup> It has been suggested that this name should be Vasubandhu. But the **Tapparya** often speaks of 'ssubandharam lakyanam', which shows that there was a Banddha logician named 'Subandhu.'

[The author next proceeds to discuss some other definitions of the Statement of Example that have been proposed]— Some writers have defined the 'Statement of Example' as 'that which is known as such', tathā dristo dristānţāḥ. What does this mean ?—we ask. The following explanation has been provided—(1) "The Subject being meant to be proved as having a certain character,—non-eternality, e. g.,—that which is \* known as having that character constitutes the Example; (2) similarly when what is meant to be proved is the fact of the Subject having the character of varying with the variations of its cause, that which is known to possess this character forms the Example, which possesses the character to be proved as well as that which proves it."†

Our objection to this definition is that, however much you try, you can not, without renouncing your own doctrines, establish any connection of concomitance between the character of *being a product* and *non-eternality*; for the simple reason that according to the tenets of the *Bauddha*, there is difference in the time (at which the two characters are present), and there is cessation of the thing; that is, the character of *being produced* is present at one point of time and *non-eternality* at an entirely different point; as at the time that the thing exists, its prior negation and destruction are not present.<sup>‡</sup>

• Both editions read 'yamasiddho', which is apparently a mis-reading for 'yamsiddho.'

<sup>+</sup> The Bauddha logician Dharmottara in his Nyāyabindutikā explains the word <sup>(</sup>prafyayabhödabhödi <sup>(</sup>) in the following words :---<sup>()</sup> The word <sup>(</sup>krifaka <sup>(</sup>)</sup> denotes the character of having several varying characteristics ; the terms that we put forward in the proving of the said character of krifakatva are <sup>(</sup>prafyayabhödabhödi <sup>(</sup>), <sup>(</sup>prayațnānanțariyaka <sup>(</sup>) and the like ; and every one of these also implies the same character of possessing varying characteristics. In the term <sup>(</sup>prafyayabhödabhödi <sup>(</sup>), <sup>(</sup>prafyaya <sup>(</sup>) stands for cause, <sup>(</sup>) bhöda <sup>(</sup>) for variations, and <sup>(</sup>) bhödi <sup>(</sup>) for that which is amenable to variations ; so that the whole word means that which has the character of varying with the variations of its cause ; this indicates the character of being produced, which, in its turn proves non-eternality."

‡ According to the Bauddha everything has only a momentary existence; so that at the moment that there is *prior negation* of the Dish, the Disk itself is not there; nor is it there when its *destruction* is present; and it is only when both prior negation and The same reasons also serve to discard such other definitions of *Example* (proposed by Bauddha writers),— as, (1) that it is that which represents the correlative (substratum) of the two characters, the one to be proved and the other proving it, and (2) that it is that which indicates the concomitance of the probans with the probandum and the non-existence of the probans where the probandum is absent.

## Sūţrā (38).

THE 'STATEMENT OF THE RE-AFFILMATION' IS THAT WHICH, ON THE STRENGTH OF THE EXAMPLE, RE-ASSERTS THE SUBJECT, AS BEING 'SO' [i. e., AS POSSESSING THE CHABACTKE WHICH HAS BEEN FOUND, IN THE EXAMPLE, TO BE CONCOMITANT WITH THE PROBANDUM]—OR AS BEING 'NOT SO' [i. e. AS NOT POSSESSING THE CHARACTER WHICH HAS BEEN FOUND IN THE EXAMPLE TO BE CONCOMITANT WITH THE NEGATION OF THE PROBANDUM].

#### Bhāşya.

[P. 43, L. 11 to L. 17].

The term 'udaharanasāpēkṣaḥ' means 'depending on the Example'—i. e. on the strength of the Example.

(a) When the Example cited is the homogeneous one, which is similar to the Subject,-e. g. when the Dish is cited as the example to show, that it is a product and is noneternal-we have the 'Re-affirmation' or 'Application' stated in the form 'Sound, is so '-i. e. 'Sound is a product': where the character of being a product is applied to the Subject Sound. (b) When the Example cited is the heterogeneous one, which is dissimilar to the Subject, -e. g. when the Soul is cited as an example of the substance which, not being a product, is eternal,-the 'Re-affirmation' or 'Application' is stated in the form 'Sound is not so'; where the character of being a product is reasserted of the Subject. Sound, through the denial of the application of the character of not being produced. Thus there are two kinds of Reeffirmation, based upon the two kinds of Example.

destruction co-exist in a thing that it can be regarded as non-sternal. Then again, the Disk that is produced must be entirely different from that which is destroyed; as the same Dish cannot continue for three moments; so that the co-existence of being produced and non-sternality is impossible for the Baugdina. The term 'upasamhāra' (in order to be made applicable to the Verbal re-affirmation) should be explained as that by means of which there is reassertion (upasamhriya (ā anēna).\*

Vārļika on Sūţra 38.

[P. 140, L. 4 to L. 12].

'The Statement of the Be-affirmation is &c. &c.' says the Sutra;—e. g. (in the reasoning 'Sound is non-eternal because it is a product'] 'so is Sound also a product'.

This factor of Ro-affirmation is essential in the statement of every reasoning; as] the expression 'as the Example so the Subject' serves the purpose of adumbration. "What do you mean by this adumbration?" Of the probans (the character of being a product), as perceived in the Example, the invariable concomitance (with the probandum, non-eternality ') having been duly recognised, the said expression (as embodying the Re-affirmation) serves to point out the similitude (to that character) of the same character subsisting in the Subject [and the indicating of this similitude is what is meant by 'adumbration'];-e. g. 'This, Subject, Sound, is also a product', [i. e. this character of being a product being of the same kind as the character of being a product which has been found in the Dish to be invariably concomitant with the probandum, 'non-eternality']. Or the Re-affirmation may be regarded as serving the purpose of indicating the possibility [of the concomitance of the probans and the probandum] in the Subject also; just as it is found in the Example. "But this possibility has already been pointed out in the statement 'because it is a product (Sound is non-eternal)'."

<sup>•</sup> On this Sütra, the Paristudfit remarks as follows :--When the Sütra speaks of the two kinds of Re-affirmation, it refers to the definitions that it has given of the two kinds of Example in the two preceding Sütras. The two kinds of Example have been defined separately; but the corresponding two kinds of *Re-affirmation* are defined in one Sütra. The *Titparya* observes that the definition common to both kinds of Re-affirmation would be in the form-general as every to be subject (as possessing the probans), on the strength of the Example.'

Certainly, this last statement does not afford the required information; all that it points out is the mere relation of cause and effect; what the statement 'because it is a product it is non-eternal' points out is only that the presence (in Sound) of the character of 'being a product' would prove the presence in it of 'non-eternality'; and whether this character of 'being a product' does, or does not, actually subsist in Sound, is learnt only by means of the *Re-affirmation*,—in the form of the proposition 'the character of *being a product* does subsist in Sound.'

When the Example cited is a homogeneous one, the Reaffirmation is in the affirmative form, 'so also is the Subject'; and when the Example is a heterogeneous one, it is in the negative form, 'the Subject is not so.'

> *Suira* (39). Вназул. [P. 43, L. 17 to P. 45, L. 10.]

Even though the Statement of the Probans and Re-affirmation are both of two kinds, yet of one uniform character is-

THE FINAL CONCLUSION, WHICH IS THE RE-STATE-MENT OF THE PROPOSITION ON THE BASIS OF THE STATEMENT OF THE PROBANS. (Sūțra 39).\*

The Probans having been stated either per similarity or per dissimilarity, we have a recapitulation (of the entire reasoning) in accordance with the Example; and this recapitulation constitutes the Final Conclusion; which is in the form—' Therefore, having the character of product, Sound is non-eternal.' This has been called '*Nigamana*' (Final Conclusion), because it serves to connect or string together (*nigamyantë anëna*) the Proposition, the Statement of the Probans, the Statement of the Example and the Re-assertion; the word '*nigamyantë*' being synonymous with the 'samarfhyanfë', (' are, supported ') and 'sambadhyanfë' (' are connected ').

Downloaded from https://www.holybooks.com

<sup>•</sup> As a matter of fact the Final Conclusion is what is e.tablished or proved, while the Proposition asserts what is yet to be proved; but the two refer to the same thing; that which appears in the conclusion as *proved* is precisely what has appeared before in the Proposition as to be proved. So that there is no incongruity in speaking of the Conclusion as being the Proposition.

When the Probans has been stated per similarity, the Proposition is in the form of the Statement 'Sound is noneternal';-the Probans is stated in the form 'because it has the character of being a product';-the Example is in the form 'things like the dish, which have the character of being a product, are all non-eternal':--- the *Be-assertion* is in the form 'Sound also has the same character of being a product'; -and the Final Conclusion is in the form 'therefore, having the character of being a product, Sound is non-eternal. Similarly, when the Probans is stated per dissimilarity, the **Proposition** is in the form 'Sound is non-eternal';--- 'because it is has the character of being a product' (Probuns); -- such things as the Soul which are not products are eternal' (Example);--- 'Sound is not a thing that is not a product' (Heassertion);--- ' therefore not being a non-product, Sound is non-eternal ' (Final Ounclusion).

In every inferential statement, which consists of the (five) 'Factors,' several distinct pramanas co-operate towards the accomplishment of the end (in the shape of inferential cogni-For instance,—(a) in the inference bearing on Sound, tion). the Proposition ('Sound is non-eternal') comes under 'Probability' (which is a 'source of knowledge' according to some philosophers]; specially as Trustworthy Assertion (in regard to the eternality of Sound, such e, g. as the Vedic texts 'all this was existing, O son, etc.') is found to be contrary to, and rejected by, Perception and Inference; and any assertion, unless it is heard directly from a Risi, cannot by itself be accepted as 'trustworthy' (except when it is found compatible with well-recognised facts); -(b) in the Statement of the Probuns we have an 'Inference', being deduced, as it is, from the cognition of similarity by the Statement of the Example; this has been explained clearly in the Bhūsya dealing with the Statement of the Example;-(c) the Statement of the Example represents 'Perception'; the deduction of the unseen (unknown or uncertain conclusion) from the seen (what is perceived in the Example) being only natural;—(d)the Re-assertion is in the form of 'Analogy' as it is expressed in the form 'as that so this', or 'this is not as that is', when there is denial of the analogous character; in which case the **Re-assertion** is of the denial of the contrary character;—(e)the Final Conclusion serves to show how all the Factors combined are capable of bringing about the cognition of a single

<sup>•</sup> The Probans is recognised as such only when the reasoner has become cognisant of the invariable concomitance between the Probandum and the Probans as perceived in the thing that is cited as the Example.

object (in the shape of the *Probandum* through that of the *Probans*).

There is mutual relationship also among the five 'Factors'. E. g. (a) If there were no Proposition, there would be no basis on which the Statement of the Probans and the other Factors could proceed;-(b) if there were no Statement of the Probane, the instrumental efficiency of what (towards the bringing about of the cognition) could be shown (by the Inference)?---what again would that be whose connection with the Example and the Probandum could be shown ?--on the basis of what again could there be the Final Conclusion consisting in the re-statement of the Proposition ?---(c) if there were no Statement of the Example, what would that be to which there would be similarity, or dissimilarity, of what is put forward as the means (Probans) of proving the probandum?---on the strength of similarity to what too would the final recapitulation proceed?-(d) if there were no *Reassertion*, the character. put forward as proving the Probandum, not having its presence in the Probandum reasserted, could not accomplish its purpose;--(e) lastly, in the absence of the Final Conclusion, there would be nothing to indicate the mutual relationship among Proposition and the other Factors, or the fact of their combining to accomplish a common purpose #; and what too would it be that would be declared as proved by means of such expressions as 'so is this.'?

We now proceed to show the purpose served by each of the five 'Factors of Reasoning.' † (a)

Bhisya: Page 45. The Proposition serves the purpose of mentioning the relations between the character to be proved and the Subject; (b) the Statement of the Probans serves the purpose of stating the fact of a certain character, which is either similar or dissimilar to what is stated in the Example, proving what is to be proved;—(c) the Statement of the Example serves the purpose of indicating the presence, between the two characters, the relation of 'proof and proved' (Probans and Probandum), as manifested in a single substratum;—(d) the purpose served by the Beassertion is to indicate the co-existence (in the Subject) of the character put forward as Probans with that put forward as the Probandum; —(e) and the Finat Conclusion serves the purpose of showing

<sup>•</sup> The translation is in accordance with the printed text; the reading of the Puri MS. is better—' nigamanābhāvē cha anabhīvyakta......pravarţanam......kasyēţi'; this reading affords better syntax.

<sup>†</sup> Though the purpose of each Factor has already been shown under the Safra defining each of them, yet the Author proceeds to explain it again, for the good of his disciples.—Tâț parya.

that it is not possible to deny, in regard to the particular Probandum, (and Subject) the relation of 'proof and proved ' which has been found, in the Example, to subsist between the two characters. \*

When the Probans and the Example have been duly put forward in the correct form, in the manner described above, there is no opportunity for the Opponent to urge (against the reasoning) any 'Casuistry',—in the shape of urging contrary arguments vitiating either the similarity or the dissimilarity of the Probans—or any one of the many 'Clinchers.' The Opponent who has recourse to 'Casuistry' does so (with effect) only after he has shown the doubtful character of the relation of 'proof and proved' between the two characters as found in the Example; and as a matter of fact a Probans is put forward as such only when its relation of 'proof and proved' to the Probandum has been duly grasped in the Example, and not when its mere 'similarity' or 'dissimilarity' to the character in the Example has been recognised. [So that when the Probans is duly stated, there can be no room for Casuistry or Clinchers being urged against it].

### Vārļika on Sūţra (39).

[Page 140, L. 14 to P. 141, L. 17].

The Final Conclusion is the re-statement of the Proposition—says the Sutra. That is to say, when it is found that every one of the Factors put forward is based upon a valid Instrument of Knowledge as bearing upon what has been asserted in the Proposition,—there is a re-statement of the same Proposition, for the purpose of precluding the possibility of any notion contrary to the Probandum being entertained; and this 're-statement' is what constitutes the Final Conclusion. Thus then, the Sutra being explained in this

<sup>•</sup> The Final Conclusion thus is not the same as the Proposition; the latter puts forward the fact only tentatively, as requiring confirmation by the reasoning with the aid of the Probans and the Example, while the former puts it forward as one fully established, and thus precluding the possibility of the truth being contrary to it. This cannot be done by the Proposition; as if it did, then the rest of the Factors would be entirely futile.—Tatparys.

The above remarks of the *Tdiparya* abow that the writer was conscious of the objection that every ayllogism involves the fallacy of *Petitlo Principis*; and has supplied a reasonable answer.

manner, there is no room for the Opponent (to urge the objection that he has brought forward).\*

Granting the Opponent's contention-[that"the Final Conclusion cannot be stated until the invariable concomitance of the Probans with the Probandum has been perfectly ascertained beyond dispute ; and as this cannot be done until all five factors, including the Final Conclusion, have been asserted: so that it is not right to say that the Final Conclusion asserts the fact as proved, and as such differs from the Proposition which states it only as to be proved "]-we proceed to consider, with a view to meet his arguments, what he has to say, and so reproduce here his own wordst :--" Reassertion and Final Conclusion cannot be regarded as distinct Factors of Reasoning; as there is no difference in the purpose served by them (and those served by Statement of the Probans and Proposition respectively)." Now it is clear that this sentence as it stands, gives no sense at all; for, [the sense of the Opponent apparently is that Reassertion serves the same purpose as the Statement of the Probans and the Final Conclusion the same purpose as the Proposition; so that] if the reasoning put forward in the sentence means that in proof of the one-ness or identity of Statement of Probans and Reassertion, the reason is put forward that their purpose is the same, --our answer is that the reason thus put forward is not valid; as the Probans put forward--- 'non-difference of purpose'--- is

• This refers to the view propounded by some logicians that the *Final Conclu*sion need not be stated, as what is asserted therein is nothing more than what has already been asserted in the *Proposition*. This objection is met by the *Vārţika*. The sense of the explanation is as follows :—The first four Factors of the inferential statement do not show that the reasoning put forth is free from the fallacies of 'annulment' and 'neutralisation'; this is done only when the *Final Conclusion* is asserted; after which it is clear that there is no possibility of any reasonings to be put forward against the conclusion thus arrived at. This cannot be done by the *Proposi*tion, which only propounds the assertion as one to be proved; the *Final Conclusion* however asserts the fact as proved, and hence not open to doubt or cavil or dispute of any kind.

+ We cannot trace this quotation. It may be from one of Dinnāga's works; as this philosopher, along with many other Bauddha logicians, lays down only three Factors of Reasoning. found to subsist in things where the Probandum (identity) is known to be absent; that is to say, as a matter of fact it is. found that there are cases where 'non-difference of purpose' is not found when the things are identical, while it is found when they are diverse and many : e. g., when there are many

and diverse jars, the purpose served by Var. P. 141. them-that of containing the water that is fetched-is one and the same, and yet the jars are not identical. If (in order to meet this difficulty) you explain that what you mean by the two Factors being not-different is (not that they are identical, one and the same, but) that they serve the same purpose; even then your Probans fails to be valid; as in that case the Probans would be one that is already implied in the Proposition; e. g. what your Proposition means is that 'the Statement of the Probans and the Reassertion are not different (i. e. ex hypothesi, they serve the same purpose),'--and the Probans is 'arthavishesat', which also means 'because there is non-difference in their purpose':--and further, it has already been explained by us before that the purpose served by the Statement of the Probans is in reality entirely different from that served by the Re-assertion; so that the Probans put forward-' because of the non-difference of their purpose'-is one that is absolutely 'unknown'.

The above arguments also serve the purpose of setting aside the view [of those philosophers who postulate only three Factors of Reasoning, and who have declared 1 that— "there should a rejection of all the Factors, save (1) the one that asserts the relation of the Probans and the Subject, (2) that which states the relation (of concomitance between the Probans and the Probandum) and (3) that which states the proposition to be proved."

The Opponent raises on objection against the form of the *Reassertion*,—" When you state the *Reassertion* in the form—'As that (the Dish) is so is this (Sound) also',—what is the exact signification of 'so'? Does it signify (1) absolute

similarity (between Sound and Dish)? or (2) the similarity consisting in their having the character of being a product in general? or (3) the similarity consisting in their being a particular product? It will not be right to take the word as signifying absolute similarity; as (if there were absolute similarity between Sound and Dish) in that case 'so is this' would not be the right term to use \*. Nor will it be right to take the word as signifying the similarity consisting in the two being a particular product; because the character of *mroduct* that belongs to Sound is entirely different (from that belonging to Dish). So the only alternative possible is that the similarity signified is only one that consists in both having the character of product in general; and this similarity is already found expressed in the Statement of the Probans (so that the Reassertion cannot be held to be a Factor distinct from the Statement of the Probans]."

This objection also is highly improper, we reply. As the purpose served by the **Reasser** tion is that of showing analogy; and this 'analogy' is not based upon, and does not necessarily imply, the presence of the Probans (the particular character of being a product, as subsisting in the Dish) in the Subject (Sound) [all that the analogy implies in reality being the presence in Sound of that particular character of being a product, which is of the same general category of being a product as that whereof another particular form subsists in the Dish also]. So there is no force in the argument urged by the Opponent. Then again, it is strange that you should speak of the character of ' being a product in general' in connection with Sound (which, is a particular thing); for when you speak of 'being a product' along with Sound, you at once specify that 'being a product' (as one belonging to a particular product, 'Sound); and how can this specified character be the character in general? Thus then we find that what the Statement of the Probans does is to indicate the

<sup>&#</sup>x27;• Absolute similarity' is possible only in case of identity, and when we wish to speak of two things as '*identical*' we use the expression 'this is the same as that', and not 'as that is so is this.'

presence of a particular form of a general character, [and as such it is not the same as the *Reassertion*, which indicates the analogy between that particular form as present in Sound and that which is present in the Dish].

This same fact serves to set aside the view that Reassertion is already included (in the Statement of the Example). For it has already been pointed out that what the words 'As that so this' express is analogy; and this analogy is expressed by the Reassertion, and not by the Statement of the Example.

Similar arguments serve also to set aside the view that the Final Conclusion is the same as the Proposition.

The two Examples that the  $Bh\bar{a}sya$  has cited—one exemplifying the *negative* and the other the *affirmative* reasoning,—each consisting of the five Factors, are entirely distinct from each other; and it should not be understood that the two form a single sentence, which is both negative and affirmative.

> SECTION (7). Factors Supplementary to Reasoning. Hypothetical Reasoning (Tarka).

> > Вн**а**зча.

[P. 45, L. 11 to P. 47, L. 8.]

After the Factors of Reasoning, it is necessary to define Tarka, Hypothetical Reasoning.\* This is what is declared in the next  $S\bar{u}fra$ .

### Sūįra (40).

WHEN THE BEAL CHARACTER OF A THING IS NOT WELL KNOWN, THERE IS PUT FOLWARD, FOR THE PURPOSE OF AS-CERTAINING THAT BEAL CHARACTER, A BEASONING (IN SUP-

<sup>•</sup> Because this is mentioned in the opening Sütra, next to 'Avayava', and also because it serves the purpose of strengthening the inferential conclusion by setting aside its contrary.

The Viz. Series edition has a superfluous ' farka b' here ; it is absent in the Puri MSS.

POET OF A CERTAIN CONCLUSION) WHICH INDICATES THE PRESENCE OF PROOF (SHOWING THE UNDESIBABILITY OR ABSUEDITY OF A CONTEARY CONCLUSION); — AND THIS IS CALLED 'HYPOTHETICAL REASONING'.

As a matter of fact, when the real character of a thing is not well known, there is a desire to know it;—this desire appearing in the form 'may I know it.' After this comes the doubt as to the thing possessing this or that particular character—one of two contradictory characters; \* this doubt appearing in the form—' is this thing so and so, or it is not so and so?'; and when one comes to ponder over these two contradictory characters, if he finds proofs in support of one of them, he accepts (or assents to) it,—this assent being in the form ' there are proofs supporting this fact; and as there are proofs, the thing must have this character, and not the other.'<sup>†</sup>

As an example of this kind of reasoning, we have the following (in regard to the cognitive Soul being a product and having a beginning, or being beginningless) :- First of all there arises a desire to know the real character of the cogniser, the agent who cognises what is to be cognised,-this desire being in the form 'may I know the real character of the cogniser.'---Then comes the doubt in the form-'has this cogniser a beginning or is it beginningless ?'-thus the real character of the thing being in doubt, and not well known, the enquirer accepts and assents to that particular character in support of which he finds proofs and grounds for acceptance. For instance (in the particular case cited) the proof would be in the following form-'If the cogniser were beginningless, then alone would Metempsychosis and Release be possible for him; - Metempsychosis consisting in the functioning, one of after the other, of pain, birth, activity, defect and ignorance, among whom that which follows is the cause of that which precedes it; and Release consisting in the disappearance, one after the other, of these same (as declared in Su. 1.1.2); and both of these would be impossible for him, if the cogniser had a beginning; for in that case the cogniser would be connected with a particular set of body, sense-organs, intellection and

• Doubt is a necessary element in *Tarka*; as it is only when there is doubt as to the presence of this or that particular character that we can have a reasoning which shows the impossibility of the presence of one, and hence the certainty of the presence of the other character; and it is this reasoning that constitutes *Tarka*.

+ The proof in support being in the form of the absurdity or impossibility of the other alternative.

sensations, only when he would come into existence for the first time; so that these, body and the rest, could not be the products of his own past actions; and further, anything that is born also ceases to be (very scon after); so that, becoming non-existent or destroyed, he would not exist to undergo the experiences resulting from his actions;—thus then for any one cogniser, it would be absolutely impossible to have either connection with more than one body, or disconnection (separation) from any body at all.' If (in another instance) bha. P. 47. the reasoner finds no such proof forthcoming, he does not accept or assent to the conclusion." It is reasoning of this kind that is called '*Tarka*', 'Hypothetical Reasoning.'

[The Sā!ra says that Tarka is 'for the purpose of knowing the real character of the thing'; against this an objection is raised:]—"Why should this reasoning be said to be 'for the purpose of bringing about the true knowledge of the real character', and not to be that *knowledge* itself [appearing as it has been represented to do, in the form 'the thing must be so and so, and of no other kind', which is the form in which the knowledge of the real character of things appears.]?"

Our answer to this is that it would not be right for us to speak of the reasoning as embodying the *knowledge* itself, because, as a matter of fact, it is indecisive, being purely permissive in its character,—the reasoner simply assenting to the assertion of one of the two suspected characters, on the strength of the proof adduced; and he does not (by this reasoning alone) accurately determine, or decide, or ascertain † that the thing must be so and so.

"How then does the reasoning serve the purpose of bringing about the knowledge of the real character of things?"

The true knowledge arises from the force of the Instrument of Cognition (which becomes fully operative and effective) when following after the reasoning, which has been duly considered and found to be free from all deficiencies, and which appears in the form of assent to the conclusion indicated by the said Instrument of Cognition; ‡ and it is in this manner that the

<sup>‡</sup>The reading of the Viz. S. edition is again defective : in L. 4, for *lakean4nugraho* we should read *'lakean4daha*,' as read by the Puri MS., by the *Tatparya* and also by three other MSS. as mentioned in the footnote in the Viz. S. edition.

<sup>&</sup>lt;sup>9</sup> The Viz. S. edition reads *fachchānujānāți*, which is clearly wrong ; the correct reading is *famānujānāți*, as the Puri MS. and the *Tāțparya* read.

<sup>†</sup> The author puts forth several synonyms with a view to show that the form in which the reasoning appears is totally different from that of a definite, fully ascertained cognition,—says the *Tafparya*.

reasoning serves the purpose of bringing about the true knowledge of the real character of things \*.

Thus then, we find that Hypothetical Reasoning serves the purpose of restoring or resuscitating the *Pramāņas* or Instruments of Cognition (which have become shaken by doubts in regard to the truth of the conclusions arising from them), and (thereby) assents to and confirms those conclusions; it is for this reason that it is mentioned along with '*Pramāņa*' in the Sūtra (1.2.1) which defines *Discussion*.

This Hypothetical Reasoning assents to or confirms the notion as to the real character of a thing whose real character is not known; *i.e.* the idea of the thing as it really exists, which is what is meant by its 'real character'; *i.e.* the character that is free from all misconceptions with regard to the thing.<sup>+</sup>

#### Vārļika.

[P. 141, L. 20 to P. 145, L. 12.]

When the real character of a thing is not well known etc. etc.---says the Sūtra. This Sūtra is to be interpreted as before [to constitute such a definition of Tarka as differentiates it from all homogeneous things, like doubt, as also from all hetergeneous things, like Desire]. 'Avijñātatat (vē ar [hē', when the real character of a thing is not known, --- the 'real character', 'tattva', of a thing consists in that form in which exists; when this is 'avijnata',--i. e. known only in a vague general sort of way. "Whence do you get the meaning that the thing is known in a vague Var. P. 142. general sort of way [when the actual term is Our answer is that that 'avijnata', not known]?" meaning is got from the actual words that are used-viz. 'avijnalalallue arthe', 'when the real character is not well known': when the Sutra uses the term 'when the real character of the thing is not well known', it clearly indicates that the thing is known in a general sort of way: for if the

<sup>&</sup>lt;sup>•</sup> By declaring that the true knowledge arises from the force of the Iustrument of Cognition, the author means to lay stress upon the fact that *Tarka* can never, by itself, be the independent means of any knowledge—*Talparya*.

*<sup>†</sup>* For '*yathābhāva*', read '*fathābhāra*', which gives better sense and is supported by the Vārtika (opening line of the Vārtika on this Sātra.)

thing were not known even in this general way, the author would not use the words 'when the *real character* of the thing &c.', he would simply say 'when the thing is not known.'

Another objection is raised :---"The term 'avijña{a{a{tivë}'} is a compound; and the real signification of the compound is not clear: whether it is to be taken as meaning 'one by whom the real character is not known,' or as 'one of which the real character is not known'. If it is asked what difference this makes-our answer is that if the compound is explained as 'one by whom the real character is not known', then it qualifies the cogniser, and the meaning of the proposed definition would be that 'Hypothetical Reasoning is that reasoning which serves the purpose of bringing about the cognition in a person by whom the real character of the thing is not known;--if on the other hand, it be explained as 'that of which the real character is not known' [this would apply to the thing cegnised]."

The right interpretation is to construe the compound through the Genitive.

"But as a matter of fact, there is no particular reason that would help us to get at the real signification of the compound; there is no special reason (one way or the other) which could enable as to ascertain whether the compound is to be construed through the Genitive or through the Instrumental."

That the construing through the Genitive is the correct interpretation is clear from the use of the word 'arthë', 'thing'; we have the phrase 'avij $n\bar{a}tataftv\bar{e}$  arthë', where 'artha' is that which is arthyamāna, which is wanted ", and as such must stand for the object (and not the agent, of the act of knowing); and this shows that the compound should be construed through the Genitive, and not through the Instrumental.

<sup>•</sup> Both editions read 'aryamāņaįvāf'; but the correct reading would appear to be 'arthyamānatrāt'.

[To this objection the Author, at the first instance, gives an obtuse reply]:—Even so, the exact signification of the compound would remain doubtful.

"Well, in that case, we need not have the compound, we may have the full phrase 'na vijnā [am [a][vam yasya' (that of which the real character is not known)."

It is true that you get what you want even thus (by dropping the compound); but the compounding is for the purpose of brevity or terseness of expression.

[Not satisfied that the real explanation has been given by the Siddhānțin, the objector reiterates his point]:---"Even though we do not have the word 'arthë', the idea of that of which the real character is not known is got by implication".

We have already said that (without the word ' $ar!h\bar{e}$ ') the real nature of the compound remains doubtful; and further [if you have recourse to *implication*, for getting at the desired meaning, then] you might as well drop the entire definition; *i. e.* if you feel justified in dropping the word ' $ar!h\bar{e}$ ' on the ground that the required sense is got at by implication, then you might as well define Hypothetical Reasoning as 'a reasoning', and leave all the rest to be got at by implication ! It is therefore essential to have the word ' $ar!h\bar{e}$ ', 'thing'; and this for the purpose of excluding the cogniser.

• Another objection is raised :--- "We need not have the term 'avijnāțațațąțvē', as that idea is got at by implication: if we have the definition in the words--- 'Hypothetical Reasoning is that reasoning which serves to bring about the cognition of the real character of a thing on the basis of proof'--it naturally follows that the real character of that thing is not already known".

<sup>•</sup> The whole of this objection and its answer has dropped out of the *Bib. Indica*. Edition.

We have already said that [if you depend upon *implication*] you might as well drop the entire definition.

"The entire definition may be dropped; and we may define Tarka simply as ' $\overline{U}ha$ '. What would that matter to us?"

The rest of the definition is necessary for the purpose of excluding that  $\overline{U}ha$ ' (Imagination) which has been postulated as a quality of Buddhi (according to the Sānkhya). As a matter of fact, in all philosophical parlance we have both kinds of  $\overline{U}ha$ '--pertaining to known things as well as pertaining to things not known; and the former kind of  $\overline{U}ha$ ' has been postulated by the Sānkhya as a quality of Buddhi,--along with 'shushrāşā' (attention), shravaņa (listening), avadhāraņa (ascertaining), vijñāna (knowing),  $\overline{u}ha$  (imagining), apoha (rejecting), fatfvābhinivēsha (intense desire to get at the truth); and according to this view there

Vār. P. 143.

is an '*Uha*' that pertains to things whose real character is already definitely

known; that is to say, when a man imagines, he recalls to his mind what he already knows; so that this ' $\overline{U}ha$ ' is one that applies to things already known; but this cannot be '*Tarka*' or 'Hypothetical Reasoning', (as we understand it); as this is that ' $\overline{U}ha$ ' which pertains to things not already known; [so that if we defined *Tarka* simply as ' $\overline{U}ha$ ', the said ' $\overline{U}ha$ ' of the Sānkhyas would become included, which would be wrong.\*]

A fresh objection is started...." The genitive-ending should be used; *i. e.* inasmuch as it is impossible to construe the sense of the Locative, we should have the form *avijnātatat! va\*ya arthasya* (in the Sūtra; for the thing whose real character is not well known becomes an objective when it comes to be known; and for the expressing of this objective character, the Genitive is more suitable (than the Locative); as when we speak of 'ghatasya vijnānam', 'cognition of the jar'."

<sup>•</sup> The Tapparya remarks...' Though according to the Nyaya, Buddhi, not being a substance, could have no quality, yet inasmuch as other philosophers have declared it to be so, there would be a danger of their Oha being included here.'

There is no force in this objection; we reply. As a matter of fact, the significations of case-endings are interchangeable; so that we may take the Locative ending (found in the Sūţra) as used in place of (and having the force of) the Genitive; such an interchange we find in one of the Sūţras of Kanāda himself, which runs as follows—'*işau ayugapaţ* samyoguvishēṣāḥ karmānyaţve hēţavaḥ' [where the Locative in *işaü* has the force of the Genitive; the meaning of the Sūţra being, 'the several unsimultaneous particular conjunctions of the arrow are the causes of its several actions of motion']. (Vaishēṣika Sū. 5-1-16.)

"But why should we have any such interchange in the present instance? We can admit the interchange only in cases where some useful purpose is served by the change; as for instance in Kanāda's Sūtra just quoted, where the sense of the Locative in the phrase '*iṣau ayugapat samyogavishāsāh*' (by being changed into the Genitive) gives the following meaning (which could not be afforded by the Locative itself): 'the cause of the diverse actions are those particular conjunctions that are of (belong to) the several parts of the arrow.' In the case under consideration however we do not find any such useful purpose served by the change; so that any such interchange of the case-endings would be highly improper."

The interchange is not at all improper; \* as it serves the very useful purpose of indicating all the special features of what has been indicated in a general way; that is to say, what *Tarka* does is to make known the special features of a thing that is already known in its general form; and of these special features, while some are mere conjuncts (connected with the thing by mere conjunction, e. g. the smoke in relation to the Fire), others are constituents (which enter into the very constitution of the thing, e. g. the eterna<sup>1</sup>ity

Downloaded from https://www.holybooks.com

<sup>•</sup> Though the Chaukhambha S. edition and the *Tatparya* both read simply '*na yukta*h (which would mean that the objection is not rightly taken), we have adopted the reading of the Bib. Ind. edition, with two '*na*'s which sounds better as a retort to the opponent's '*na yukta*h' and gives better sense.

of the Soul) [and if we had the Genitive ending with the noun arfha in our Sūțra, it might include the conjuncts, but it could never include the constituents; while both become included if we have the Locative form ' $arfh\bar{e}$ '].

The term 'Kāraņopapaļļiļaķ' in the Sūţra means 'pramāņopapaļļiļaķ', and 'upapaļļi' means sambhaoa, possibility; the sense being that the man reasons thus—' as proofs are possible in support of this conclusion with regard to the thing, it must be so.'

The Bhāşya proceeds to cite an example of Hypothetical Reasoning: When a certain cognisor knows a thing in a vague general sort of way, there arises a desire in his mind to know the real character of that thing ;—for instance, with regard to this same cognising agent he desires to know whether this cogniser is a product, having a beginning, or it is beginningless; and of these two alternatives he accepts, assents to, one •—as the Bhāşya says (P. 46, L. 3); and this assent is in the form—' this cogniser should be beginningless '; this is the reasoning that is called Tarka.

The Opponent raises another objection :---"The form in which this assent appears makes it a *true cognition* itself; why then should it be said that it is for the purpose of bringing about the cognition, etc., etc."

Our answer is that the assent cannot by itself be called 'true cognition'; as it is devoid of that certainty of conviction (which should characterise every true cognition); it is not in the form 'this *is*, must be, so', but only in the form 'this should be so', e. g. 'the cogniser should be beginningless';

### Var. P. 144.

this is how one assents to a conclusion in support of which he finds proofs.

"In what way then, does this assent become 'iattvaj- $\vec{\pi}anartha$ ', *i. e.*, serving the purpose of bringing about the true cognition?"

<sup>•</sup> The Changh. S. edition reads '*iksfaram*', but the Bhāya reads simply '*ikam*'. The Bib. Ind. S. has a reading which is totally corrupt.

It does so through an examination of the subject-matter of the proof; that is, by means of *Turka* one examines the object of suspected contrary characters, in regard to which he finds proofs (in support of one of those characters), and decides in favour of one of them, 'this must be right'; so that the said proofs (or Instruments of Knowledge) come to apprehend—bring about the true cognition of—that thing, after it has been duly examined by the Hypothetical Reasoning (which thus is of use in bringing about the said true cognition).

There have been several objections against the separate treatment of *Tarka*:—(A) Some people hold that *Hypothetical Reasoning* does not in any way differ from *Doubt* and *Definitive Cognition*; they agree that *Hypothetical Reasoning* must be in the form of either *Doubt* or *Definitive Cognition*; if it is in the form of the former, then, having been already included in that, it should not be mentioned separately; and if it is in the form of the latter, then it is included in that.

(B) Others (some Naiyāyikas) have held that Hypothetical Reasoning is only a form of Inference; 'hēļu', '*tarka*' 'anvaya', 'anvīkṣā', all these, according to them, being only so many names of Inference itself. (C) Others again (other Naiyāyikas) hold that Bypothetical Reasoning is that particular kind of Inference which depends upon corroborative proof (in the form of absurdity of the contrary conclusion).

(A) First as regards the view that Hypothetical Reasoning does not differ from *Doubt* and *Definitive Cognition*, our answer is that this view cannot be accepted; as it shows that you (who propound it) do not know the real form of the cognitions (appearing in Doubt, Definitive Cognition and Hypothetical Reasoning); it seems you have been led away by our statement that 'Hypothetical Reasoning applies to things whose real character is not well known' (which indicates the point of similarity between Hypothetical Reason-

ing and Doubt). But the fact of the matter is that, though it is true that Hypothetical Reasoning applies to things whose real character is not well known, yet you do not seem to have grasped the form of the Cognitions (resulting from Doubt, Definitive Cognition and Hypothetical Reasoning): the cognition arising from Doubt is in the form of uncertainty -' is it so or so?'-while that arising from Definitive Cognition has a degree of certainty attending it -' it must be so'; while Hypothetical Reasoning (giving rise to a cognition which is endowed with neither certainty nor uncertainty) be comes separated, on the one hand, from Doubt, by the force of the 'presence of Proofs' (which removes the absolute uncertainty of the doubtful cognition),-and, on the other hand, it does not attain to that degree of absolute certitude which attends Definitive Cognition; as in Hypothetical Reasoning there is no recognition of specific details; and it is this recognition of specified details that brings about Definitive Cognition ; and this recognition is absent in Hypothetical Reasoning.\*

(B) This same argument serves also to set aside the view that Hypothetical Reasoning is only a form of Inference; for the simple reason that in the former there is no recognition of specific details. "What then is the form of this Reasoning?" It always appears in the form 'it should be so.'

(C) Lastly those people, who hold that Hypothetical Reasoning is only that Inference which depends upon *yukii*, admit by this same assertion that it is different from Inference pure and simple. 'Yukii' being the same as 'proof', what the

<sup>•</sup> The whole of this passage is corruptly read in both editions. The Chaukhamba Series Edition reads—'Samshayāt nirņ vyāt prachyutah bāraņopepattisāmarthyāt samshayā kāraņopapattirasti nirņayam &c.' The meaning of the passage is that Tarka falls off from Samshaya and does not attain Nirņaya; so that the 'nirnayāt' is entirely misplaced. Again 'samshayā kāraņopapattirasti' is an absurdity. We have adopted the following reading 'samshayāt prachyutah' kāraņopepattisāmarthyāt kāraņopattirasti nirņayam &c.,—which is an improvement on the Bib. Ind. S. Edition; though this latter also gives the same sense.

assertion of these people means is that 'Hypothetical Reasoning is cognition depending on possibility of proof'; so that this involves a difference in names only (from our own view). If by 'yuk!i' you do not mean 'proof', then, it behoves you to explain the exact signification of the word ' $ap\bar{e}k\bar{s}\bar{a}$ ', 'dependence', as occurring in the compound ' $yuk!yap\bar{e}k\bar{s}am$ '; that is to say, you have to explain what is it upon which the Inference depends in the bringing about of the cognition of its Subject. If you mean by ' $yuk!yap\bar{e}k\bar{s}a$ ' that the Inference depends upon other Instruments of Cognition, then it becomes necessary for you to explain the character of the help (that is accorded to Inference by the other Instruments of Cognition); that is to say, you should explain in what way Inference is helped by Sense-Perception and Verbal Cognition. If this help by Sense-Perception and Verbal

Vär : P. 145.

Cognition consists in the fact of their bearing upon the same subject as the

Inference, then what would Hypothetical Reasoning be? [i. e. it would be only a form of Inference, and as such would be included among the 'Instruments of Cognition', and would not deserve to be mentioned and dealt with separately] ;---specially as in such a case of Inference (as you would make out Hypothetical Reasoning to be) what you would have is only the combination of the three Instruments of Cognition (Sense-Perception, Verbal Cognition and Inference). As a matter of fact however the notion of 'it may be' or 'it should be' (which follows from Hypothetical **Beasoning)** must be due to a cause wholly different from that of the certain cognition which is brought about by Inference).-because it is entirely different in its character, -just as the cognition resulting from Sense-Perception is entirely different in character from that resulting from "We might also argue as follows-Hypothe-Inference. tical Reasoning must be regarded as Inference, because, like Inference, it depends upon the recognition of the relationship (of concomitance) between the Probans and its

This only shows that you do not compresubstratum." hend the real nature of Hypothetical Reasoning ; as a matter of fact, Hypothetical Reasoning does not depend upon the recognition of the relationship of the Probans and its " How is that ?" Simply because neither substratum. of the two-neither the Probans nor its substratum-is recognised in the case of Hypothetical Reasoning; in a case where both are recognised,-the character that is put forward as the Probans, as also the Subject in which that character subsists-there alone we have Inference : in a case however where the only thing that is recognized is the Subject, and not the Probans, we have a case of Hypothetical Reasoning; so that it is not right to say that this latter depends upon the recognition of the relation between the Probans and its Substratum. Then again, Inference becomes operative only after the character subsisting in the Subject has been cognised ; which is not the case with Hypothetical Reasoning, which operates also after the cognition of characters belonging to things other than the Subject; e.g. in the reasoning-'There should be a human agent here, because here we find horses being driven', where the character cognised is that of 'being driven', which does not + subsist in the Subject, the 'human agent'; so that here we have a reasoning (Hypothetical), which serves the sole purpose of precluding the possibility of the thing being a more post, and proceeds on the basis of the cognition of a character belonging to something other than the Subject.

• As an example of Tarka we have the reasoning—<sup>9</sup>If the Soul were a product, his metempsychosis and Release would both be impossible'. On the other hand, a negative Inference—to which Tarka has been held to be reduced—is in the form— 'The living body cannot he without a Soul, as, if it were so, it would not have breathing &c.' Now in this latter we fully recognise the concomitance between the body and the presence of breath &c; but in the former case, we do not recognise any such concomitance between the Soul and the character of being a product, which, in fact, does not belong to the Soul at all; so that in this case there is rothing that could bring to the mind the concomitance between the Probans and its substratum.

+ A 'na' here is essential ; the Chaukhambha S. Edition supplies it.

This Hypothetical Reasoning resuscitates the Instruments of Cognition, and hence is mentione l along with these latter, says the Bhāşya (P. 47, ll. 6-7); and this means that Hypothetical Reasoning cannot itself be regarded as an Instrument of Cognition, as it does not actually bring about the cognition of things [all that it does it to strengthen the conviction obtained by means of an Instrument of Cognition].

# Sūţra (41).

Nirnaya—Definitive Cognition.

Bhāsya.

[P. 47, L. 8 to P. 48, L. 14].

In regard to the subject-matter of the above-described Hypothetical Reasoning-

In regard to every matter of dispute we have two opposite views—one seeking to establish the truth of a certain conclusion with regard to the thing under investigation, and the other is the denial of that conclusion, which seeks to confute the former view; and these two,— the arguments favouring and the arguments demolishing—are based upon *i. e.*, put forward with a view to—the 'conclusion' (*paksa*) and its 'confutation' (*prafipaksa*); and the two sets of arguments themselves, when appearing together,—*i. e.* when

<sup>•</sup> By 'pakşa' and 'prafipakşa are meant respectively -(1) the argument in favour of a certain conclusion, and (2) the argument against that conclusion. Such is the interpretation by the Bhāşyu, the Vārfika and the Tāfparya. But the Nydyasāfrarizīrāņa of Rādhāmohana takes prafipakja' as the arguments against the view opposed to the said conclusion.

put forward side by side,—come to be spoken of respectively as the 'paksa' (a certain view) and 'pratipaksa' (the contrary view). And of these two views, it is necessary that one should be rejected and the other established; and when one is established, the 'ascertainment' with regard to that is called 'Definitive Cognition', 'Nirnaya'.

An opponent [being misled by the terms ' paksa', 'one view', and ' pralipaksa', ' contrary view', to think that the whole definition refers to Discussion, and it implies the presence of an element of Doubt] urges the following objection :- " It is not possible to have the said ascertainment by means of the 'paksa and pratipaksa'. In every Discus-sion what happens is as follows :--(A) At first, one disputant states one view and supports it \* with arguments, and rejects all the objections that the other party could bring against that view;--(B) the second disputant thereupon refutes the arguments put forward by the former in support of his view, and also answers the arguments urged against the objections put forward by himself;-(C) so it goes on, until one (set of arguments) stops; and where one has stopped, the other becomes established; and it is by means of this latter set of arguments alone Bhāsya P. 48. (and not by both, as said in the  $S\bar{u}tra$ ) that we have that ' ascertainment of the real character of the thing' which is called 'Definitive Cognition'. [So that it is not right to speak of the 'ascertainment' as obtained through both 'paken and pralipakea']; specially as in a bona-fide discussion, both parties are equally certain as to the truth of their allegations, and there is no element of Doubt in their minds; or else, they would not engage in the Discussion."

The answer to the above is that, as a matter of fact 'ascertainment' is got at through both. "How is this proved?" In the following manner, we reply. Every Discussion ends in showing the possibility or reasonableness of one view and the impossibility or unreasonableness of the 'confutation' of (the arguments against) that view, [or vice versa, the reasonableness of the confutation and the unreasonableness of the original view]; and it is only when we have both of these—the reasonableness and unreasonableness—that

• The Viz. S. Edition reads a superfluous ' fam' here ; which is not found either in the Puri MS. or in the reading adopted by the *Tatpurya*.

they conjointly set aside the doubt or uncertainty attaching to the real character of the thing; while if we do not have them both, the uncertainty continues to remain.

'After deliberating'—i. e., after having carried on due deliberation. This 'deliberation' consists in the bringing to light—i. e., formulating—the two sides of the question; whereby it provides the occasion for reasonings to operate,—i. e., to be put forward (with a view to ascertain the truth).

What is declared here in this Satra must be taken as referring to mutually contradictory views pertaining to one and the same thing. When it is found that the two contradictory characters subsist in similar things (and not in the same thing), then both being possible, both are accepted; for the simple reason that due investigation has shown such to be the real state of the things; for example, when the definition of Substance is stated in the form 'Substance is that which has Motion,' it is found that a Substance, for which Motion is possible or certain, 'has motion,' while at the same time, there are substances for which no activity is possible, and these certainly 'have no motion '[so that in regard to this case both views. 'Substance has motion' and 'Substance has no motion,' are admissible, and as such cannot be called 'contradictory views.' Even with regard to the same thing, if the two contradictory characters are predicated in reference to different points of time, then there is an option with regard to time both being accepted as true, in reference to different points of time]; -e. g., the same substance which, at one time being moving, is said to 'have motion,' may be admitted to 'have no motion' at another time, when either the motion may not have yet appeared, or it may have ceased.

When the Sūtra declares, that 'Definitive Cognition is that ascertainment which is got at after duly deliberating the two sides of a question,' this is not meant to apply to all kinds of definitive cognition; for in the case of Perception, which is born of the contact of the sense-organ with the object, the definitive cognition consists simply in the 'ascertainment of the object';—it is only in regard to a thing in doubt, which is under investigation [and with regard to which a Hypothetical Reasoning has been put forward], that 'definitive cognition' consists in the ascertainment yot at by duly deliberating the two sides of the question;—while lastly, in regard to the subject-matter of Discussions and Scriptures there is no 'deliberation' (or doubt).

Thus ends the First Duily Lesson in the First Discourse of Vātşyāyana's Bhāşya.

Vārțika on Sūţra (41).

[P. 145, L. 14, to P. 148, L. 8.]

'In regard to the subject-matter of the abovementioned Hypothetical Reasoning'—says the Bhāşya—' when there is ascertainment after etc., etc.' (Sū. 41).

The connection and purpose of this definition also is as before.<sup>†</sup>

'After deliberating '-i.e., after due deliberation.

'Pakṣapra!ipakṣābhyām'—this compound should be expounded as 'pakṣā! cha pra!ipakṣā! cha'. ‡ By the word 'pakṣa' hore is meant the argument in support of the first view; and by

The Nyāyasūţravivaraņa remarks that in the case of.' Inference for one's own benefit, also, there is neither ' doubt' nor ' two sides.'

<sup>+</sup> The connection being that in the opening Sütra, 'Definitive Cognition ' has been mentioned immediately after 'Hypothetical Reasoning';—and the purpose lies in the differentiating of 'Definitive Cognition ' from all other like and unlike things.

**t** The Bib. Ind. reads **unverticeurs**; the Benares Edition drops it entirely; the former reading is meaningless. The *Tatparya* reads **unv unvertex** which gives very good sense, as translated. The *Tatparya* adds the following explanatory note: <sup>1</sup> The author lays stress upon the fact that both the contradictory views help in the ascertainment; he does this with a view to meet the objection that—the first view representing arguments in support of a certain conclusion, may lead to ascertainment; but no ascertainment could be helped by the arguments against that conclusion. What the author really means is that the latter helps indirectly, while the former does so directly.

<sup>•</sup> In the case of Perception we have neither 'doliberation' nor the 'two sides of the question';—in the case of things under investigation we have both; while in the case of Discussion, we have the 'two sides of the question', but no 'deliberation',—as each party is equally certain of his view; and in the case of Scriptures, there may be 'two sides'; but there is no 'deliberation' or 'doubt.'

the word '*pralipaksa*' is meant the objection against the arguments supporting the first view<sup>•</sup> of the thing in question; and the ascertainment of the real character of the thing, which is got at by means of these two, *paksa* and *pralipaksa*, is called 'Definitive Cognition.'

The Opponent raises the question :-- "In the definition that the  $S\bar{u}_{l}ra$  propounds, is it meant to lay the emphasis -(A) on 'Definitive Cognition', or (B) on the expression 'by the two sides of the question-the arguments &c., &c,' or (C) on ' of the deliberating ' ? † (A) If the meaning be that 'that alone is Definitive Cognition which is got at by means of the two sides &c. '---the restricting emphasis being laid on the term 'Definitive Cognition'-then this would be contrary to the assertion (made in a previous Sūtra) that Perception is cognition (definite) produced by the contact of a sense-organ with the object '.1 (C) The same objection is applicable if the definition is explaimed as 'that alone is Definitive Cognition which is got at after Var : P. 140 deliberating &c.' [as in the case of Perception there is no 'deliberating &c]. (B) If, lastly, the meaning be that 'all that is got at by means of the two sides of the question must be Definitive Cognition only',-then it comes to this that we have Definitive Cognition resulting from both

• The Bib. Ind. Edition reads ' pratipaksavishayasya', which is wrong: the correct reading-paksavisayasya, is supplied by the Benares Edition.

 $\dagger$  These alternatives are not very happily expressed in the Vārțika. The Tāțparya explains them clearly as follows :-(A) The sense of the definition, according to the first alternative would be that 'that alone is Definitive Cognition which is got at &c. &c.';-(B) according to the second alternative it would mean that 'all that is got at by means of the two sides of the question must be Definitive Cognition '; (C) and according to the third alternative, the meaning would be that, 'that alone is Definitive Cognition which is got at after deliberating &c. &c.'

<sup>‡</sup> This assertion means that Definitive Cognition is got at without having either 'deliberation' or 'the two sides of a question'; while, *ex hypothesi*, that alone can be Definitive Cognition which is 'got at by means of the two sides &c., &c.' [i.e. from the presence as well as the absence of 'the two sides of the question; which is absurd]." •

To the above question our answer is as follows :-- [We accept the first of the three alternatives put forward by the Opponent; and] the restriction implied in that first alternative is meant to refer only to the subject-matter of the Hypothetical Reasoning, and not to other matters; the meaning being that whenever there is ' Definitive Cognition ' in regard to what has been the subject-matter of Hypothetical Reasoning, such Definitive Cognition is 'got at only after due deliberation of the two sides &c.'; and the two conditions laid down-(a) that it is got at after deliberation and (b) through the two sides &c.-do not † apply to all Definitive Cognitions "Why should the definition be taken as in general. restricted to the subject matter of Hypothetical Reasoning only?" For the simple reason that 'Definitive Cognition' has been mentioned (in the opening Sūtra) next after 'Hypothetical Reasoning', the definition propounded is taken as restricted to the subject-matter of that Reasoning; and further, as a matter of fact it is possible to get at Definitive Cognitions in other ways [than by 'deliberating over the two sides of this question]', so that the restriction laid down in the Sūțra could not rightly be taken to apply to every kind of Definitive Cognition. "What, then, is the definition of Definitive Cognition in general ?"

'Definitive Cognition' in general may be defined as that ascertainment which makes the thing known. This Definitive Cognition in general, when pertaining to objects of cognition,

<sup>•</sup> In this case there would be no such restriction as that ' that alone is Definitive Cognition which is got at by means of the two sides of the question only.'; so that this would mean that that is Definitive Cognition which is got at by means of the presence of the ' two sides', as well as from their absence. 'And such a definition would be too narrow' says the *Tilparya*; that is, it would not apply to the true Definitive Cognition which-follows only from the presence of the two sides, and not from their absence (also).

<sup>+</sup> This no, found in the Benares Edition, is essential.

is obtained by means of the 'Instruments of Cognition 'exclusively, as well as by the several 'Instruments of Cognition' conjointly (with the arguments against, and in favour of, a certain conclusion); and the distinction made is that in the case of the subject-matter of Hypothetical Reasoning, the Definitive Cognition is obtained conjointly (by the 'Instruments of Cognition' and the arguments *pro* and *contra*); while in the case of other matters, it is obtained by means of the 'Instruments of Cognition' exclusively. [This is what is meant by the  $Bh\bar{a}sya$ , p. 48, ll. 10—13].

In regard to the subject-matter of Discussions and Scriptures, there is no 'deliberation' (or doubt)—says the Bhāşya (P. 48, 1. 13). This means that in the case of Discussions, Definitive Cognition is got at only by means of the two sets of arguments for and against a certain conclusion; and neither in this case, nor in the case of Scriptural matters, is there room fof 'deliberation or doubt'; because so far as Discussions are concerned, both parties to it are equally certain as to their conclusions [and there is no element of doubt on either side]; —and as regards Scriptural matters, the Definitive Cognition is obtained entirely with the help of the Scriptures themselves [and there is no room for any other sources of information; so that in this latter case there is neither 'deliberation' nor the 'two sets of arguments' pro and contru].

Another objection is raised—" You have taken the words 'paksa' and 'pralipaksa' to mean the arguments for and against, respectively, against a certain conclusion;—this is not right; as there are no grounds for taking them as such; that is to say, when you take the words 'paksa' and 'pralipaksa' to mean the arguments for and against a certain conclusion,—what is the ground on which you take them so? Why cannot the two words be taken in their ordinary literal significations ['paksa' standing for a certain view, and 'pralipaksa' for the opposite view]?"

Downloaded from https://www.holybooks.com

The reason, why the words cannot be taken in their literal significations, lies in the fact that the two views are objects (of cognition); and an object cannot make things known, being itself a thing made known; [so that these could not be the means whereby we could get at the Definitive Cognition]; it is for this reason that we take the words to signify the two sets of arguments, which do make things known, and are not themselves objects.

"If such is the case, why should not the Sūţra itself have contained these words themselves? That is, the Sūţra, in that case, should have been read as—'vimrishya sādhanopālombhābhyām arthāvadhāraņam nirņayah'; such a reading would make the meaning clearer; and we do not perceive any advantage in preferring a term (pakṣapratipakṣāhhyām) simply on the ground of its containing fewer syllables (than the other term, 'sūdhanopālambhābhyām."

What is urged here would not be right; as the words actually found in the Sāira are there for the purpose of indicating the identity of subject-matter. That is to say, what is meant is that 'Definitive Cognition' pertains to that same subject which forms the subject-matter of the two sets of arguments [and this matter is none other than the views]; and if we had the Sāira in the form 'sādhanopālambhābhyāmnirņayah', it would not be clear to what matter the resultant Definitive Cognition pertains; whereas by means of the terms 'pakṣa' and 'praipakṣa' both become clearly indicated—the two sets of arguments, as well as their subject-matter.

"In that case the term 'artha, 'object', need not be there; as it is already indicated. 'By what is it already implied?'

Var. P. 147. When you speak of the 'ascertainment obtained after deliberating over the two sides &c.', it is clearly indicated that the 'ascertainment' is of a

<sup>&</sup>quot; The correct reading is atil attain as found in the Benares Edition.

certain object; so that it is unnecessary to have the term 'artha' (in the Sūtra)."

It is not unnecessary to have the term, we reply: By the direct mention of the term 'artha' what is meant to be shown is that the Definitive Cognition may pertain to either of the two; that is to say, even though the 'object' is already implied, yet the term 'artha' is used with a view to show that the Definitive Cognition may pertain to the one or the other of the two views.

[I'he Vārțika next takes up the objection that has been urged in the Bhāşya, p. 47, l. 13 et. seq.]—" It is not right to say that ascertainment follows from the two sets of arguments; because, as a matter of fact, it follows from only one‡. As a matter of fact, we know that ascertainment never follows from the two sets of arguments conjointly§; it follows from only one of these—from that one which remains unshaken."

In answer to the above it is said in the *Bkāşya* (p. 48, l. 1) that 'the ascertainment is got at through both.' "How is that?" Well, as a matter of fact, when both sets of arguments are rejected, the deliberation or doubt does not cease; nor does the doubt cease when neither of the two is rejected; it is only when one set is rejected and the other remains unshaken that (doubt disappears, and) Definitive Cognition is obtained; and [as both these processes, the re-

• The Benares Edition reads simply w, was say which would mean 'what is urged is not right; it is necessary to have the term.' But the Tilparya reads of a was say which is better, being more forcible as a retort. The Bib. Ind. reading is defective.

† It would seem that Vāchaspaţi Mishra is not satisfied with this answer; the *Tāţparya* provides another:—The presence of the word 'arţha' is meant to preclude the contingency of the views being merely imaginary; what is meant is that the thing to what the views appertain must be a real thing.

1 The Benares edition reads simply mfund: which is meaningless. The Bib.-Ind. Edition reads aneurafund: which is right.

5 The Benares Edition reads alarivary instead of aga.vary and the former is clearer.

jection of one and the non-shaking of the other, are necessary] it follows that both sets of arguments *conjointly* form the means of Definitive Cognition.

"If such be the case," the Opponent asks, "then, at what precise stage is the Definitive Cognition obtained? Is it obtained at the first stage (when the arguments *in favour of a* certain view come up)? Or at the second stage (when the arguments *against* that view come up)? Or at the third stage (when the answer to these latter comes up)?"

At all points, we reply; for such is the fact [that sometimes the Definitive Cognition is obtained at the very first stage, at other times at the second, and sometimes at the third stage]. Or, perhaps, it would be correct to say that it is obtained at the third stage (at which the Definitive Cognition must appear). "How so?" The process is as follows :---One man seeks to establish the first view by means of arguments, -on this; the second man either desists, on perceiving the arguments urged, or on perceiving that the arguments urged are fallacious, is moved to activity by a desire to point out the defects in the said arguments\*, and puts forward arguments that demolish the former view :---the former man either desists from further reasoning, if he finds his opponent's arguments (against the first view) sound; or, if he finds that the defects (in his own argument) as urged by these arguments (of the second man) are not real defects, then he proceeds to urge this fact (by way of answer to his opponent);-thereupon the arguments against the first view having been set aside, the argument that might have been urged in support of a second view also becomes set aside. "How does that follow?" It follows from the fact that the arguments in favour of the first view have been found to be absolutely free from defects; and when the arguments in favour of one view have been found to be free from defects, there is no room for the

<sup>\*</sup> The Benares Edition reads twife which is correct.

urging of arguments in favour of any other view; so that any such second view becomes (*ipso facto*) rejected<sup>\*</sup>; and the result is that there is Definitive Cognition of that view the arguments in support of which have been found to be unshaken. Thus it is found that Definitive Cognition is obtained conjointly from the *probability* (or reasonableness) of the first view and the *improbability* (or unreasonableness) of the opposite view.

Some people have held that 'Definitive Cognition' is only Inferential. Some philosophers declare that Definitive Cognition is the same as Inferential Cognition, and not different from it. But this view is not right; because Inference stands in need of the recognition of the relationship between the *Probans* and the *Probandum*; which is not necessary in the case of Definitive Cognition†; specially as we find that Definitive Cognition is the result or effect brought about

Vār: P. 148. by Instruments of Cognition; while Inference is itself an Instrument of Cognition, Definitive Cognition is cognition itself (brought about by the instrumentality of the said Instrument); and further, Definitive Cognition pertains to its own subject-matter, while Inference pertains to its own subject-matter as well as to others; e. g. the perception of smoke, in so far as the cognition of smoke itself is concerned, is 'Definitive Cognition ', and not 'Inference'; when, however, by means of that same perception of smoke one gets at another cognition (of fire), then it becomes 'Anumāna' (Inference);—as then it becomes that by whose instrumentality the other thing is inferred; and the final

\* The *Titpurya* ad is that there are certain Definitive Cognitions that may be regarded as purely inferential cognitions; but all of them are not such; so that it is not right to identify all Definitive Cognitions with Inference.

**468** 

<sup>•</sup> The Bib.-Ind. Edition reads निवर्त्तते न दिसोद: &c which may be translated as-• there being no room for arguments in support of a second view, every such other view ceases to exist. The translation has adopted the reading of the Benares Edition where the w is absent.

resultant cognition, in this case, is that of fire. If the term 'Anumāna' (Inference) is construed substantively (as anumīyaļē yaļ, that which is inferred, and not as that by whose instrumentality a thing is inferred),—and then Definitive Cognition is alleged to be the same as 'Anumāna',—then, in that case, such an allegation should be received with acceptance; on the other hand, if the term 'Anumāna' is construed instrumentally (as that by whose instrumentality a thing is inferred),—and then it be alleged that Definitive Cognition is the same as 'Anumāna',—then we must repudiate the allegation; as there is certainly a difference between cause and effect; and 'Anumāna' is a cause, an instrument, while Definitive Cognition is the effect, the result (brought about by that instrument). So that Definitive Cognition cannot be regarded as the same as 'Anumāna', Inference.

Thus ends the First Daily Lesson in the First Adhyāya of the Nyāyavārļika of Udyoţakara.

Downloaded from https://www.holybooks.com

DISCOURSE I. Second Daily Lesson. SECTION (1). Controversy. Bhāşya on SU. 1.

(P. 48, L-15 to P. 50, L. 8).

\* There are three kinds of Controversy-(1) Discussion, (2) Disputation and (3) Wrangling. Of these-

> DISCUSSION CONSISTS IN THE PUTTING FORWARD (BY TWO PERSONS) OF A CONCEPTION AND COUNTER-CONCEPTION, IN WHICH THERE IS SUP-PORTING AND CONDEMNING BY MEANS OF PROOFS AND REASONINGS,—NEITHER OF WHICH IS QUITE OPPOSED TO THE MAIN DOCTEINE (OR THESIS), AND BOTH OF WHICH ARE CARRIED ON IN FULL ACCORD-ANCE WITH THE METHOD OF REASONING THEOUGH THE FIVE FACTORS. (SU. 1).

When two contrary particular characters are alleged to subsist in the same substratum, they are called 'paksa and pratipaksa', 'conception and counter-conception', being, as they are, like opponents to each other; e.g. when we have two such allegations as—'soul is' and 'soul is not'; when, however, the contrary characters are conceived to subsist in different substrata, they are not called 'conception and counterconception'; e. g. such conceptions as 'Soul is eternal' and 'Buddhi is non-eternal.' 'Parigraba', 'putting forward,' means asserting, or laying stress upon, the thing being of a particular character. And it is this asserting of two contrary characters that constitutes Discussion.

The distinctive features of this Discussion are next put forward :---(1) In which there is supporting and condemning by means of proofs and reasonings----i. e. in which a conception is supported by means of proofs and reasonings, and also condemned by means of proofs and reasonings; so that what is

<sup>•</sup> The connection of the two Daily Lessons is thus explained in the Parishuddhi— The entire method of reasoning with all its accessories has been explained in the First Daily Lesson. All this reasoning helps the reasoner to arrive at a definite conclusion either by himself alone, or by holding a consultation with others. In the latter case there arises occasions for discussion and mutual criticism; and it is this latter method of arriving at a conclusion that constitutes the subject-matter of the Second Daily Lesson. Controversy, according to scertain writer, whom the Parishuddhis calls the **algorithm are:** — algorithm are: — are: and **algorithm** are; while according to the "Vähyas" (outsiders, *i.e.* Bauddhas) there is only one kind of Controversy.

meant is that both the supporting and the condemning are done by means of proofs and reasonings.<sup>\*</sup> 'Supporting' here stands for establishing, and 'condemning' for denying or rejecting. These two, 'supporting' and 'condemning' of the two conceptions, proceed hand in hand, in a connected manner,—until one of the two conceptions becomes rejected and another established; so that there is ultimately 'condemnation' of that which has been rejected and 'supporting' of that which remains unshaken.

As a rule *Clinchers* are employed in Disputation; so that their use is precluded from Discussion. But even though Clinchers, are, as a body, precluded fron Discussion, yet the use of some of them is permitted,—this is what is meant by the qualification 'not opposed to the main doctrine'; †—for instance, it is permitted to employ, in Discussion, the Clincher, in the shape of the Fallacy of 'Contradiction,' which has been defined (in Sū. 1-2-6) as 'that which contradicts the accepted thesis.' Similarly the

•The footnote in the Vizianagram Sans. Series says that the 'supporting' is done by means of proofs only and the 'condemning' is done by means of reasonings only. But this is contrary to what follows in the *Bhaya*, the *Varfika* and the *Tatparya*. The last says—Though in Wrangling also there is putting forward of conception and counter-conception, yet herein we have no 'supporting' of the counter-allegation ; as in Wrangling there is only demolishing of each other's positions, and no supporting at all ;—though in Disputation there is supporting of the counter-conception, yet this supporting and condemning are not always by means of such reasonings as have all their factors entirely valid. So that from both Wrangling and Disputation Discussion becomes distinguished by reason of its having both the supporting and condemning done in accordance with reasonings and proofs. The Varfika explains the compound 'pramānatarkasādhanopālambhab,' somewhat differently : It takes it as a madhyamapadalooī compound, expounding it as 'pramānatarkasādhawab pramānatarkasādhanopālambhrshcha'—i.e. the supporting is done by means of proofs and reasonings, and the condemnation of that supporting is also done by means of proofs and reasonings.

+ The Vartika does not accept this interpretation; according to it, this qualification is meant to exclude the Apasiddhinta.

The Parishuddhi thus explains the difference in the two interpretations :--We have a general rule that 'no animals should be killed,' then we have the exception 'the Agn.somiya animal should be killed': so here we have the general rule that in w. on clinchers are to be put forward, and then there is the exception, that the apasiddhanta clincher should be urged. Thus according to the Bhāsya. According to the Varfika the sense is that there is a pasiddhanta clinchers in wrw; and hence there is the exclusive selection of the apasiddhanta as the only one of the clinchers to be urged.

qualification 'carried on in full accordance with the method of reasoning through the Five Factors 'has been added with a view to indicate that it is permitted to employ, in Discussion, the two Clinchers of 'Deficiency,'—which is defined as 'that which is wanting in any one of the factors of reasoning' (Sū. 5-2-12)—and 'Redundance'—defined as 'that which puts forward superfluous Probans and Example.' (Sūţra 5-2-13).

[One purpose of the term 'in which the supporting and condemning are by means of proofs and reasonings' having been already explained, the Bhasya proceeds to point out other purposes served by the same term]-(1) Even though ' proofs and reasonings 'are included among the ' Factors ' [so that the presence of 'proofs and reasonings' is already implied in the qualification 'in accordance with reasoning through the Five Factors'], yet 'proofs and reasonings' have been added separately, with a view to indicate that the proofs and reasonings urged by the two parties should be inter-related (and not independent of one another); otherwise it would have to be regarded as 'Discussion' when both parties go on urging arguments, each in support of his own view (without any regard to arguments propounded by the other).\* -(2) In some cases, it is found that even without the use of the 'Factors of Reasoning', several Proofs accomplish their purpose (of determining the real nature of things); so that it would be real Discussion also when the 'supporting' and 'condemning' are carried on by means of such proofs [as are independent of the Factors) ;-and it is this fact that is indicated by the adding of the term 'by means of proofs and reasonings' [while, in the absence of this term, the said form of Discussion would not be included in the definition, which, in that case, would make the presence of the 'five factors' essential].-(3) Lastly, the term 'in accordance with proofs and reasonings' has been added for the purpose of precluding the notion that Disputation does not admit of those Clinchers that are employed in Discussion,-Disputation being defined (in the next Sūtra) as 'that in which the supporting and condemning are carried or by means of Casuistry, Futile Rejoinder and Clinchers'; that is to say, this definition of Disputation might give rise to the notion that Disputation is that wherein the supporting and condemning are carried on by means of Casuistry &c. only (and never by means of proofs and reason-

<sup>•</sup> For instance, when one party goes on propounding, from his own standpoint, arguments in support of the eternality of Sound, and the other person putting forward from his point of view alone, arguments in support of its non-eternality; and neither takes any account of the arguments urged by the other.

ings); while wherever the supporting and condemning are carried on by means of proofs and reasonings, it is *Discussion* always (and never *Disputation*);—and with a view to preclude this notion, the Sūtra has added the term 'by means of proofs and reasonings'. [The sense being that, as a matter of fact, some of the Clinchers employed in Discussion may be employed in Disputation and *vice-versa*, and yet there is this distinction that, in Discussion the supporting and condemning aro done strictly in accordance with proofs and reasonings, while in Disputation, they are done by means of Casuistry, etc., *also*].

# VARTIKA ON SU. (1).

# [Page 148, L. 12 to Page 162, L. 10.]

There are three kinds of Katha-Discussion, Disputation and Wrangling-says the Bhasya (P. 48, L. 15). This does not mean that these three alone are entitled to the name of 'Kathā' (as stories also are called Katha); what is meant is that investigation into the nature of things - which investigation, carried on by means of controversy between two parties, is called ' Kathā'-is of three kinds only; that is to say, when the nature of things is investigated, this investigation is carried on in these three ways ; - this investigation thus being in the form of either 'Discussion or Disputation or Wrangling.' Of these, Discussion is that which is held by a person with his tutor and such other friends ; while Disputation and Wrangling are held with a person who desires to gain victory over him. These three kinds of Controversy having to be defined in the order in which they have been mentioned, the Sutra proceeds to provide the definition of Discussion.

Discussion consists, etc. etc. (Sū. 1-2-1). Discussion convar. P. 149. Now what are these—'pakşa and pratipakşa'? (Bhāşya P. 49, Ll. 5-6). Now what are these—'pakşa and pratipakşa'? The Bhāşya answers—' Pakşa and Pratipakşa' are names given to two contrary particular characters subsisting in the same substratum,—i.e., at the same time and in an uncertain manner.—By 'particular characters' here are meant the special features of a thing; as a matter of fact, when a thing

is known in a general way, and its special features are not definitely known, there is investigation or controversy with a view to ascertain this special feature; so by 'paksa and pratipaksa, ' conception and counter-conception' are meant two particular features or characters\* as subsisting in the same thing; when such contrary characters are found to subsist in different things, they do not give rise to any controversy; as it is quite possible for them to really subsist in the two separate things; for instance, when we have such two conceptions as 'Buddhi is non-eternal' and 'Soul is eternal.' Similarly when the characters are not mutually contradictory, they do not give rise to controversy; as a matter of fact it is only when the characters are mutually contradictory that they give rise to controversy,-and not when they are not contradictory; e. g. when we have such two conceptions as 'substance has motion', and 'substance has qualities.' Similarly also the conception of the two characters should pertain to the same point of time; as they do not give rise to contro. versy, when pertaining to different points of time; as it is quite possible for two contrary characters to subsist in the same thing at different points of time; e.g., when we have such two notions as 'substance has motion' and 'substance has no motion',-each of these referring to different points of time. Lastly, the notion of the two characters should be doubtful; it is only when there is uncertainty about them that they give rise to controversy; and not when there is certainty about them : because there can be no controversy when a certain, definitive cognition has already been obtained.

The two 'contrary characters', as above described, are what have been called (in the Sūţra) 'pakşa and prali-

<sup>•</sup> The correct reading is using a with as in the Benuros edition.

<sup>†</sup> A long passage is wanting in the Bibliotheca, Indica edition,—it is supplied by the Benares edition—after गुण्डवयेलि (P. 9) we should read वयकासायिति जिल्लकास-ये।जे विवारमयेग्रवसः मु प्रवासोयवसः विवार हब्यं गिण्डियाउनेति सासमेदे वति सन्दरितायिति स्वविरियते। विवारण्ययोगवसः नावविद्यादिति,—then follows गिर्देयो॰

paksa'; and the 'putting forward' of these consists in the asserting or laying stress upon the thing being so and so, in the form 'this object is possessed of this character, and not of that'; this putting forward of the two contrary characters is what is called 'Discussion'.

This 'putting forward of the two contrary characters' being common to all the three forms of Controversy, the Sūţra proceeds to add further qualifications with a view to distinguishing 'Discussion' from the other two: "-In which there is supporting and condemning by means of proofs and reasonings—i. e. wherein is done— in which there issupporting and condemning by means of proofs and by reasonings (Bhāşya, P. 49, 11. 6-7). The locative ending in 'asmin'— 'in this'—indicates the subject-matter, the word meaning in this controversy.

An objection is raised—"How can supporting and condemning both be done by means of reasoning? Reasoning is not an Instrument of Cognition or Proof, being a mere aid to other Proofs; as it has already been explained above that Reasoning is not included in any of the four Instruments of Cognition or Proofs; nor is it an independent Proof. Thus then, not being of the nature of a Proof or Instrument of Cognition, how can it be the cause or instrument of supporting and condemning?"

We do not mean that Reasoning is the cause or instrument of supporting and condemning; what we mean is that Reasoning serves the purpose of investigating the real nature of the thing over which the Instruments of Cognition or Proofs are operating, and thereby it helps these Proofs; so that the Instruments or Proofs come to determine the real character of the thing that has been duly investigated by the Reasoning. (cf. Var(ika, above, P. 144, ll. 2.3]. Thus, being an aid to the Proofs, 'Reasoning' comes to be mentioned

<sup>•</sup> The Bib. Indica reading जायुवरे is meaningless-the correct reading being जायजी as given by the Benares Edition.

(in the present Sūțra) along with 'Proofs', in reference to Var. Page 150. Discussions [as already explained in the Bhāgya, P. 46, ll. 6-7].

Another objection is raised :-- "What is meant by saying that there is supporting as well as condemning in Discussion ? (a) Does 'sādhana' stand for the act of supporting, and 'upalambha' for the act of condemning? [the words being construed substantively-as 'sūdhyatē ili sūdhanom' and upūlabhya (ē iļi upālambhah)? (b) or 'sādhana' is that by which the supporting is done, and 'up7lambha' is that by which the condemning is done. [The two words being construed instrumentally-'sadhyafe anena' and 'upalabhyafe (a) If the two words 'sādhana' and 'upālumbha' anena]? are meant to be taken substantively-standing respectively for the act of supporting and the act of condemning,-then it is not right to say that they are done 'by means of proofs and reasonings '; as neither proofs nor reasonings bring conviction to other persons; that is to say, proofs as well as reasonings bring conviction to the person himself, while Controversy is for bringing conviction to others; so that there can be no supporting and condemning (in this sense) by means of proofs and reasoning. (b) If, on 'the other hand, the words 'sādhana' and 'urālumbha' are to be taken instrumentally, -standing respectively for that by which supporting is done and that by which condemning is done,-then, it is unnecessary to add the further qualification that 'it is in accordance with the five factors'; for the simple reason that what is meant by the term 'factors' is already implied in the term 'in which supporting and condemning are done by means of proofs and reasonings', where 'supporting' and 'condemning' stand for the means of supporting and condemning."

The above objection does not hold, we reply. As it is for an entirely different purpose; that is to say, the purpose served by the further qualification, 'in accordance with the five factors; is entirely different; as we shall explain later on.\*

The Opponent takes up the other signification of the words]-" But if the words 'sadhana' and 'upalambha' are taken as the act of supporting and of condemning,-with reference to what subject would they be done 'by means of prcofs and reasonings'? 'It has already been explained that they are done with reference to the conception and counter-conception,-the supporting being with reference to the co ception and the condemning with reference to the counter-conception.' It is true that it has been so explained; but this is not the right explanation. 'What is wrong in this explanation? Its unreasonableness lies in this, that as a matter of fact, the condemning is not (always) with reference to the 'counter-conception'; it may be that the supporting 'by means of proofs and reasonings' is with reference to the conception; but the counter-conception does not form the subject of condemning. 'What we say is, not that the condemning has for its subject the counter-conception,-but its supporting; i. e., it is the supporting of the counter-conception that forms the subject of the condemn-But the word 'condemning' being mentioned in ing.' proximity to the word 'counter-conception',-how can the act of condemning become connected with something other than the counter-conception, --- in the shape of its supporting? Such connection is due to capacity and incapacity ; that is to say, that alone is condemned which is capable of being condemned : and the counter-conception is not capable of being condemned; for the simple reason that a thing, whether it is condemned or not condemned, retains its own character; it remains the same when you condemn it, as when you do not Vår P. 150 : condemn it [and so the counter-conception retaining its own natural character, should never be the

<sup>&</sup>quot;Though the words 'sadhana' and 'updlambha' may be rightly taken both ways—su stantively as well as instrumentally,—yet the answer that is now given is on the basis of the second in erpretation—the words being taken as the means of supporting and condemning.—Tatparya.

subject of condemning', The same might be said with regard to the supporting also: the supporting also being a means, an instrument, can never abandon its own character; so that it will not be right to say (as you have said) that the condemning is of the supporting (of the counter-conception)."

Just so, we reply; there can be no condemning of the instrument or of the objective; the Objective is always efficient in its own sphere; and so also is the Instrument ; neither of these has an efficiency in other spheres; so that if it is found inefficient in such other spheres, the fault does not lie with either the Objective or the Instrument. "Whose then is the condemning ?" The condemning is of one who is caught or defeated ? "Who is it that is defeated?" The person: not understanding and misunderstanding (of the real nature of things) both belong to the person, not to the Objective or to the Instrument; so that when the person describing a thing, makes use of such Objectives and Instruments as are inefficient, he is defeated; so also is the person who fails to understand the thing as described; and this character or position of the person is expressed by means of words; so that when one speaks of the 'counter-conception' (counter-allegation) as being 'condemned', he imposes upon the words a character which really belongs to the person."

"But how is this (that the condemning is of the supporting of the counter-conception) got out from the words of the Sūțra?" It is rightly got out from the words of the Sūțra. "How?" The term ' pramāņaļarkasādhanopālambhah' is to be expounded as 'pramāņaļarkasādhanah'... 'pramāņaļarkasādhannopālambhah;—the sense clearly being that the supporting is done by means of proofs and reasonings and the condemning of

<sup>•</sup> The objective and the instrument are always efficient ; they are made inefficient by the person who employs them in spheres not their own ; and in this the fault lies with the person. For instance, when a person strikes the air with a sword, and the sword fails to cut, the fault lies with the man, and not with the instrument, sword—which is quite capable of cutting wood,—nor with the air, which is quite capable of blowing. So that when we speak of the condemning of the *supporting*, we use the word figuratively.— *Tapparya*.

the supporting is also done by means of proofs and reasonings, the second or repeated word 'sādhana' being elided, as already implied; just as we have in the case of the compound 'ustramukhī', 'camel-faced.' [where the compound is expounded as 'ustrasya mukham iva mukham yasyāh'].

"In what way is Discussion distinguished from Disputation and Wrangling, by means of the qualification in which supnorting and condemningare done by means of proofs and reasonings? For like the 'putting forward of a conception and counter-conception', this also (the supporting and condemning by means of proofs and reasonings) is common to all the three forms of controversy."

It is not common to all the three forms of Controversy. The fact of the supporting an l condemning being done by means of proofs and reasonings is restricted to Discussion only; that is, it is 'Discussion' only where the supporting and condemning are done by means of proofs and reasonings; and where these, supporting and condemning, are done by means of Casuistry &c., it is 'Disputation' or 'Wrangling.'\* Just as, though the presence of horns is common to the cow and the gavya, yet the contracted neck (peculiar to the gavya) and the hanging dewlap (peculiar to the cow) serve to ditinguish the gavaya and the cow (respectively); similarly the fact of supporting and condemning being done by means of proofs and reasonings distinguishes 'Discusion 'from 'Disputation ' and 'Wrangling' (even though the putting forward of conception and counterconception is common to all the three).<sup>†</sup>

<sup>•</sup> The correct reading is 'jalpavilands', as in the Benarcs edition.

<sup>&</sup>lt;sup>†</sup> The distinction is thus explained in the *Tatparya*--Whether or not the Reasoning Factors actually employed are based upon sufficiently valid proofs and reasonings, it does not watter ; but in Discussion the parties themselves are quite certain as to their being so ; and there is no deceit ; both parties being free from passion, they do come to a right understan ling after all. In Disputa ion and Wrangling on the other hand, it is a imissible that even the learned man may put forward reasons and arguments that he knows to be untrue ; so that there is room for Casuistry &c. ; even though these latter donot lead to the correct conclusion being arrived at, yet it is enough for the party if they succeed in averting bis defeat.

"Disputation is that in which the supporting and condemning are done by means of casuistry, futile rejoinder and olinchers says the Bhāsya (P. 49, l. 17—P. 50, l. 1). From this it would seem that in Discussion no Clinchers are to be employed; as these are laid down in regard to another form Controversy; and when there are no Clinchers used in Discussion, there can be no real ' condemning' either."

Our answer is that, even though Discussion is said to be that in which supporting and condemning are done by means of proofs and reasonings, yet there is room for the omployment of Clinchers also; so that the objection does not quite lie with our view. The fact of the word 'condemning' being there is itself an indication that Clinchers are admissible in Discussion.

The opponent retorts—" Well, if all the Clinchers are admissible in Discussion, then it does not really differ from the other forms of Controversy: and the difference is merely in names. If by the term ' condemning' it is meant to be indicated that the Clinchers are to be employed in Discussion, then the difference lies in names only; and there is no real difference between Discussion and Disputation; as in both Clinchers are employed."

This is not right, we reply; as the two qualifying terms (that follow in the Sūțra) serve the purpose of *restricting*<sup>\*</sup>; it is because the term ' condemning' indicates the employment

Vār: P 151. vār: P 151. of all the Clinchers, that it becomes necessary for the *Sūţra* to add the two further terms, 'not opposed to the main thesis' and 'in accordance with the five Factors,' in order to restrict the actual use of the Clinchers (*i e.*, to indicate the admissibility of some and the inadmissibility of the rest).

In this connection, while giving an example, the  $Bh\bar{a}sya$  (on P. 49, ll. 11—12) has said that the qualification 'not opposed to the main thesis 'indicates the permissibility of the urging (in Discussion) of the Fallacy of Contradiction. But this is

<sup>•</sup> The Bib. Indica reading बाषियवार्थ is wrong. विवय. के is correct, as in the Benares edition.

not right; as that is got at from another term; as a matter of fact the permissibility of the fallacy of Contradiction is indicated by a different torm; for instance, in the next term, 'in accordance with the *Five Factors*,'—while the Clinchers of 'Deficiency' and 'Redundancy' (are indicated by the term 'five'), the term 'Factors' indicates the possibility of the urging of the Defects of the *Factors* also [and as the Probans is a *Factor*, its defects become thus indicated, and the Fallacies, of 'Contradiction' and the rest, are only 'defects of the Probans']. Under the circumstances, if the term 'not opposed to the main thesis' also indicated the same fact, it would be a mere superfluous repetition [*literally*—' mere pounding of what is already pounded']. So that our conclusion is that the explanation given in the Bhāṣya is not the right one.

"Is the term 'not opposed to the main thesis ' then entirely superfluous ?"

It is by no means entirely superfluous; as it serves the purpose of inficating the Clincher of Apasiddhanta, 'groundshifting'; the Clincher of 'ground-shifting' has been defined (in Sūțra, 5-2-23) as 'when a person, after having accepted a certain doctrine, proceeds with the controversy indiscriminately, not always in conformity with the accepted doctrine, it is called ground-shifting'; and it is this that is meant to be indicated by the term in question. So that the term is not absolutely superfluous.

"Whence do you get at this restriction, that in Discussion only these two Clinchers—Fallacy and Ground-shifting are to be employed (and none of the other twenty-two)?"

This restriction is got at from the fact that it has been declared that Discussion is that form of Controversy which one holds with his Teacher (and such other friendly persons). That is to say, Discussion is that form of Controversy in which an honest sceker after truth enters into controversy with his Teacher and other friends,—with a view to the three purposes (of knowing what he does not know, of removing his doubts, and of obtaining the corroboration of what he knows already); so that for the sake of this seeker after truth, it is necessary for the other party to put forward explanations and arguments so long as the enquirer does not obtain the true knowledge he is seeking; as he is not an opponent (to be silenced, but an honest seeker to be illumined); [so that in this only such Clinchers can be used as either elucidate the truth or expose the untruth];—and the Controversy that one enters into with an opponent is not 'Discussion', but 'Disputation '; and in this latter it is only right that every Clincher should be made use of. \*

Another objection is raised :—"The term 'in which supporting and condemning are done by means of proofs and reasonings' would imply that there is proving and disproving (establishing and demolishing) of both views. That is to say, if Discussion is that in which supporting and condemning are done by means of proofs and reasonings,—then it follows that both parties in it are equally capable of putting forward 'support' and 'condemnation' in due accordance with proofs and reasonings; which would mean that it is possible for the views and conceptions of both to be established and demolished ! † "

This absurdity does not arise, we reply; as this is not exactly what has been asserted; it is not asserted that there are proofs available for both parties; all that is meant is that it is incumbent on both to put forward in 'supporting'

<sup>+</sup> Both the contrary views being equally capable of being supported by proofs and reasonings, it would mean that both are correct ; that is to say, the thing in question is possessed of two contrary characters !-*Täfparya*.

<sup>•</sup> For instance, the Clincher 'Embarassment' does not help the enquirer to a knowledge of the truth; 'Redundancy' also serves only to confuse the man, and so obstructs his knowledge of truth. Similarly with several other Clinchers; all which should flud no room in honest Discussion; but are admissible in Disputation, where the aim is not so much to get at the truth, as to silence the opponent.

their view (what they honestly think to be) proofs only; and it does not follow that these should be *real* proofs. Similarly with 'condemning' also. \*

Other philosophers have offered the following definition of Discussion :— 'Scaparapakşayoh siddhyasiddhyartham vachanam vādah', 'Discussion is conversation for the purpose of establishing and demolishing one's own and another's conceptions. '†

Here we find the term 'soa' (one's own) and 'para' (another's) inserted as qualifying the term 'conception'; and as a matter of fact, there can be no reasonable explanation of this,—(A) because none of the alternatives possible is Var: P. 152. Var: P. 152. admissible, and (B) because the compound involved is an impossible one (as will be shown later on, on P. 154, l. 14 et. seq.).

[A] What, we ask, is the exact signification of the terms 'sva', 'own' and 'para' 'another's'? (a) Dothey stand respectively for possessing and discarding? (b) or for what is to be proved and what is to be found fault with? (c) or for the Previous (Wrong) view and the Final (Right) view? (d) or for a certain view and the contrary view? (e) or for the first view and the second view? (f) or for the assertion, by means of diverse verbal expressions, of the diverse characters of a single thing possessed of several

† The Tatparya calls this definition 'sauban thavam laksanam', 'Subandhu's definition'. We know of a Bauddha logician 'Vasubandhu', who flourished about 480 A. D. (Medieval Logic, P. 75). From what follows in the Vārţika, p. 156, l. 17, this 'Subandhu' must be the author of the Vadavidhana or Vadavidhi. This work along with its commentary is criticised here and also before. pp. 120-121.

<sup>•</sup> The *Tâţparya* thus explains—In Discussion there is a check upon the assertions of the two parties; this check being in the form that only such arguments in support and condemnation should be put forward as the person himself considers to be sound, and not what they themselves know to be unsound; such unfair arguments being admissible in Disputation and Wraugling only. This check does not mean that the conceptions in support of which such arguments are put forward are necessarily true. So that in Discussion also Casuistry &c. are permitted; but only so far as is necessary for the knowing of truth; without which it would be impossible to get at the truth.

characters [the assertion of one character by one man being 'sva', and the assertion of another character by another man being 'para']?

As regards (a), it is not possible for the words 'sva' and 'para' to stand for possessing and discarding; as it is impossible, in this connection, to ascertain the exact relation of 'who' or 'what'. That is to say, if the word 'sva' means possessing, there can be no connection with 'who' or 'what': so that it cannot be ascertained of whom it is 'sra' and what "Possessing means making own; so that it is 'ana'. would be sva for the man who makes it his own." But it is just this that we are considering-what is meant by this "When a man has reasons for having making own. the idea of mine with regard to something, that is his sva; and the thing with regard to which he has no grounds for that idea of mine, that is para." What is pointed out here as the sense of 'sra' may be possible in the case of the ordinary man (who deals with such belongings as land. grains and the like)\*; but no such sva or pura (in the said sense) is possible for the philosophical author (who deals with such things as Sound being non-eternal and the like); and yet the proposed explanation would seem to be intended for the latter case. Then again, what forms a man's possession always accomplishes something for his benefit; † and certainly the upholder of a theory is not in any way benefitted by that theory. The conclusion therefore is that the terms 'sva' and 'para cannot stand respectively for possessing and discarding.

The purport of this answer is thus explained in the Tatparya:—In the case of such possessions as land, grains &c., a man is said to have possession over them when he has the power of utilising them to his own purpose, this possession being acquired by earning; and no such idea of possession can have any connection with such things as *Scund asserted to be non-eternal* and the like. And it is just such things that Controversy deals with.

The Benares Edition reads विद्यि : रवावी व प्रपटय स्वा चेंग दि आखवारस्य &c. &c, But the reading of the Bib. Indica Edition gives better sense.

+ " जस्याचित्रपर्"' of the Bib Indica reading is apparently wrong.

(b) As regards (b)-If the terms 'sva' and ' para' be held to stand respectively for what is to be proved and what is to be found fault with, this would mean that the view that a man has got to prove is his 'sva' (own) view, and that which he has got to find fault with or criticise is ' para' (another's) view. And this explanation certainly evinces a wonderful adroitness in the manipulating of words and their meanings ! \* 'Sādhanīya' is symonymous with 'Sadhya' [which latter denotes the view that the man puts forward and claims to prove |; how then can there be any such expression as 'sādhanīyah svapaksah', 'what the man has got to prove is his own view'? [as this would be tautological]<sup>†</sup>, That is to say, the very definition of a man's 'own view' (as propounded by the Bauddha philosopher himself) is that which is intended to be proved ; and this is exactly what is meant by the term 'Sadhaniya'! Then again, such terms as 'one's own view' and 'another's view', are used only for the purpose of differentiation: so that in the term 'one's own view'. that 'view', which is differentiated by the qualification one's own', cannot stand for anything in a general form (that could be common to the denotation of the other term); or else (if it did so), the qualifying term 'one's own' "But it has been found that should be meaningless. even generic terms have specific denotations." § Cer-

" The Benares edition, as well as the Tatparya read merrie in place of merrie

\* The qualifying term 'Sadhariya' being synonymons with the qualified term 'Scapakça', 'own view'-Tatparya.

<sup>‡</sup> The question is—The term 'Sva' in 'svapakia'—does it, or does it not, serve to specify and particularise, something which, without it, would be too gereral? If it does, then the term 'Sva' cannot have any such wide denotation as 'that which is to be proved'; [as this would not be a specified or particularised denotation at all]; it must mean something else (in a more specified form). If on the other hand, the term does not serve to specify or particularise, then as a qualifying term, it fails in its purpose, and becomes absolutely meaningless.—Tā (parya.

5 'It has been found '-The Bib. Ind. edition reading is 'gengenneg'. The Benares edition and the *Talparya* both read 'gingging'. This latter is better; as with the other reading, the passage would cease to be an intervent; and that it is a **therefore** is clear from what follows in the next scatteres, and also from the explanation given by the *Talparya*, as follows:--"It is true that a qualifying term has a tainly, words that denote particular things can never be 'generic'; in fact, restricted as they would always be by their context and such other circumstances, they would be 'specific' terms. Then again, we do not quite understand what is really meant by the assertion—" the view to be proved is 'sva-pakşa', 'one's own view', and the view to be found fault with is 'para-pakşa', another's view". The expression 'to be proved' standing for 'pakşa' (according to the Bauddha logician's definition of 'Pakşa' as that which

is intended to be proved,)-what is to be proved Var. P. 153. may be spoken as 'paksa' +; but finding fault with can have no connection with any 'paksa' t itself (which ex hypothesi is what is to be proved): as even after effective fault is found with it, the 'para-paksa'. 'another's view', remains a 'puksa', a 'view', all the " In that case, what would be the subjectsame. matter of ' fault-finding ' or criticism ?" In some cases of criticism, the object criticised is something that has formed the subject matter of demonstration (by the other party); while there is very often such criticism also as has no connection with either one's own view or the view of the other party [e.g. when criticisms are urged against side-issues or hypothetical opponents]. "Which is that criticism which is connected with demonstration? and what is this

particularised denotation; but even so, the term does not cease to be a generic term [for even the particularised denotation includes a number of things]; and as such it can still have a generic denotation [so that the qualifying word 'sva' can still have its denotation restricted to what is to be proved, and yet this can be regarded as a 'generic' denotation, including a number of things to be proved.]—Talpurya.

• So that 'srapskis', even though denoting 'things to be proved', in general, can never, in actual usage, have any such wide denotation; it will always be restricted to a particular thing to be proved as determined by the context and other circumstances under which it would be used. For 'surge' the Bib. Ind. edition reads 'surge'.

+ The Benares edition reads, for wait, 'wa: wai'. But the former gives better sonse.

2 Both editions read '**unit**'; but the correct reading is ' clearly indicated by the explanation provided by the *Tatparya*. Mere criticism does not deprive the view of its character of being one 'view' of the thing under discussion.

' demonstration ' ?" 'Demonstration' is the name given to that five-factored verbal expression which is put forward in support of a certain paksa (or view) :---and this verbal expression may (in some cases) be deficient, and (in other cases) redundant, and it may also contain such Factors as are not quite valid; ---and when (one or the other of) these defects is pointed out, we have a criticism that is connected with the demonstration,-the said demonstration being the actual subject of the criticism. There may, however, be occasions for bringing forward, in course of a discussion, other kinds of criticism also; and it is these other kinds of criticism that have no connection either with the demonstration, or with one's own view, or with another's view; such criticism. for instance, as consists in the urging of the 'Faulty Rejoinder', or of such arguments as are meant simply to embarass (the opponent by trickery, which has no connection at all with the point at issue). "It is true that criticism can have no direct connection with or bearing upon a paksa or view; but that criticism which aims at the demonstration of another's view,-even though it does not wipe out of existence the view itself, yet-in as much as it serves to reject its demonstration, it is right to say that it 'discredits'. 'impairs' or 'damages' ('dRsayati') that view [so that it can be called the 'criticism, dusana, of the paksa' indirectly. in the sense of *dasayti iti dasanam*, that which 'impairs'. though directly what it does is only the rejecting of the demonstration]." But it is not right to employ, in the body of a definition, words in their indirect or figurative sense: as definitions are put forward for defining the real character of things; the true purpose of a definition consists in defining or specifying the true thing; and certainly there can be no defining or specifying by means of words used in their figurative sense.\* there being no limit to the indirect figurative significa-

tions of a word. And further, if it be held that it is correct to say that ' the criticism sets aside the vinw', taking the term 'sets asido' in its figurative sense (of indirectly impairing or damaging), then you might as well define Discussion as • assertion for the purpose of setting aside another's view '.\* "What would be the advantages of such a definition?" Well, the text of the Sūtra would be considerably shortened ; and [yet the required meaning would be obtained; as] both the proofs (propounded in support of one's own view) and the criticism (aimed against another's view) serve the same purpose, indirectly, of setting aside another's view. "But we prefer the other form of the definition, as it saves us from having to take both terms (proof and criticism) in their indirect signification." [It you fight shy of having recourse to indirect signification] Then, in that case, it would be best to state the definition in the direct form-' Discussion is assertion for the purpose of establishing and setting aside the demonstrations of the views.' In this form the definition would be quite explicit and perfectly in harmony with its subject-matter. "But all criticisms donot bear upon demonstrations (as you have yourself explained, above, 1. 3); so that the objections you have urged against our definition are equally applicable to the definition now proposed by you." Certainly, the objections are not equally applicable; for it is possible for some criticism to bear upon the Demonstration (of other views); and in as much as some criticism always does bear upon ' demonstration', even though we have the statement in the general form ('criticism of demonstration'), yet the necessary restriction (of the 'criticism', as that alone which bears upon demonstration) would be obtained by the force of possibility. For these reasons the conclusion is that it is not right to explain the terms 'one's own' and 'another's' as 'what is to be proved' and ' what is to be found fault with', respectively.

<sup>•</sup> The Bib. Indica edition reading परपच: ह्यूप्य gives no sense. The Benares edition reads परपच हिड्यूप्य . But from what follows below, l. 15, the correct reading should be परदया दिड्यूप्य .

(c) "We may then explain the terms 'one's own' and Var. P. 154. (another's' as standing for 'the previous (wrong) view' and 'the final (right) view'; that is to say, what have been called the '*Purva*—Previous or Wrong—pakṣa, 'view', and the '*Uțțara*—Final or Right pakṣa, view', are what are meant by the terms 'one's own view' and 'another's view.'"

This also cannot be accepted ; as the employment of 'proof' and 'fault-finding' has been restricted ; that is, in your own (Bauddha) Sūtra you have declared that 'the terms one's own and another's are connected with proofs and criticisms'\*. which means that proving and fault-finding are restricted in their scope,-the sense being (as indicated by the order in which the terms 'proof' and 'fault-finding' are mentioned) that all the proving should bear upon one's own view and all the fault-finding should bear upon another's view; and such being the restriction laid upon the employment of proving and fault-finding. [if you explain the terms 'one's own view ' and 'another's view 'respectively by the terms 'Wrong view' and 'Right view'], all the fault-finding should always be aimed + at the Right view; [and all the proving should bear upon the Wrong view] and it would come to this that the upholder of the **Right view would find fault with his own view!** Then again, the 'own view' of the upholder of the 'Right view' must always be different from the 'Wrong view [so that it is not that the 'own view' is not always the 'Wrong view', as the above restriction would have it]. Further, that the terms 'one's own ' and ' another's' signify the 'wrong view' and the

• This is clearly a 'Sütra by the Bauddha logician. The Bib. Indica edition reads de unue; but the Benares edition has d unue; and the *Tatparya* quotes the whole Sütra as d unugud: स्वपरस्वा: सम्बद्धान्द्रे and this is the reading adopted in the translation.

+ The Benares edition reads जियने for नियमत: The latter gives better sense.

The Bibliothecu Indica reading is defective ; there should be a 'gud' after 'faud' in 1. 5 ; this is the reading of the Benares edition.

"right view" is indicated neither by the etymology of the terms, nor by any law, nor by usage."

(d) and (e) The above arguments also serve to set aside the theories that the terms 'one's own ' and ' another's ' stand for 'a certain view ' and the ' contrary view ' (d),—or for the ' first view and the ' second view ' (e).

(f) "The real explanation of the terms 'one's own view' and 'another's view' is that they are applied to the one and the same thing-viz. 'view' or 'theory'-which, when specified as 'to be proved comes to be called 'one's own view', and when specified as 'to be found fault with'. as 'another's view.'" This explanation may be right; but in that case the use of the Dual number (in 'svaparapaksayoh') would not be right. We do not deny that one and the same thing may have a twofold character ; but, in that case, what we would urge is that the Dual number is not right; that is to say, as a rule, when one and the same thing is spoken of as specified by several qualifications, it does not take either the Dual or the Plural number; c. g. when people observe Devadatta with an umbrella and also with a stick, they donot speak of him as 'chhairidandinau agalau', ' two men, with stick and umbrella, have come.'

Thus it is found that none of the alternative explanations of the terms 'one's own' and 'another's' as occurring in Subandhu's definition is acceptable; so that it is not right to employ such terms in the definition.

[B] [The second objection against Subandhu's definition indicated on p. 152, l. 1 is next explained]—The proposed definition cannot be accepted, as the compound 'svaparapaksa' is an impossible one. For, in the first place, the compound could not be taken as a Genitive-Tatpurusa, as the exact forms of the 'relation' and the 'relative' are not †

<sup>•</sup> The reading of the Bib. Indica edition is corrupt. The Benares edition supplies the correct reading -- प्रिभाषा प दहि:

<sup>+</sup> This '=', as read in the Benares edition, is essential.

discernible. Whenever there is compounding of the Genitive, there is a clear discernment between the 'relation' and the 'relative': e. g. in the compound 'raja purusah' [where the purusa, the servant, is clearly discerned from the  $r\bar{a}j\bar{a}$ , the King]. And [not only are the two clearly discerned, but] the two are entirely distinct; whenever we have the notion of 'the relation and the relative', the two are entirely different from each other; as for instance, in the same compound 'rajapuruşah'. "But we find the Genitive compounded also in cases where the two factors are not entirely different; e. g. in such compounds as 'senāpațih' [where the 'pati', the commander, is not entirely different from the 'sena', army], and 'panakangam' [where the 'anga', the ingredient, is not distinct from the 'panaka', drink]." This contention is not right; simply because the fact urged cannot be admitted : what man in his senses can fail to recognise that what is denoted by the term 'drink' is distinct from what is denoted by the term 'ingredient', or that the 'army' is something different from the 'units composing the army? That the 'army' and such other collective nouns actually denote things different from their constituents has

Vår : P. 155.

been explained by us in course of our treatment of the relation of qualification and

qualified.' If you think that the term 'sva' signifies 'own', and the term 'paksa' signifies the thing to be proved \*,—this also will not be right; as this interpretation has been already rejected (above under b, on p. 152, l. 13). It has been already shown by us how the term 'sva' cannot signify own. † For these reasons there can be no Genitive compound in the term under consideration. The same reasons also preclude the possibility of its being taken as a Karmadhāraya compound; for such a compound also could be expounded as 'the svaariha'—svashchāsau arihushoha—where 'sva' would appear as

Downloaded from https://www.holybooks.com

the qualification of the 'artha', which, it has been shown, it cannot be; and also because there is no difference between the two [and yet both these are conditions essential for a Karmadhārya compound. | For the same reasons, the term cannot be taken as a Bahuvrihi compound; specially as [if the compound, 'Svapaksa' were taken as Bahuvrihi, it could only mean 'one who has the sva, i. e., himself, for paksa, what is to be proved '; so that] in that case the proving or demonstration will have for its object the demonstrator himself! Therefore we cannot take the word as a Bahuvrihi compound. " The torm sva can cortainly mean that which has to be proved ; and as such it is possible for it to be a qualification of the paksa."\* This will certainly not be possible: for the simple reason that if 'sva' means what is to be proved, then it becomes only another synonym of the word 'paksa': the terms ' paksa 'and ' sūdhaniya,' ' what is to be proved ' are clearly synonymoust; and certainly there can be no co-ordinate Bahuprihi compound between synonymous terms; e.q., there can be no such expression as 'vriksa-tarum' chhinatti', (where 'vriksa' and 'taru'are synonymous). The proposed explanation also involves a self-contradiction: If the term 'paksa' denotes something different from what is denoted by 'svapaksa' (as it should certainly do if the compound 'svapaksa' is to be taken as suggested),-then this would go against your own assertion that ' Proposition consists in the declaration of the paksa.' "How so?" Because as a matter of fact it is the svapaksa that forms the subject-matter of the Proposition [and yet your last assertion speaks of the Proposition as asserting the paks'a, which, according to you, is not the same as svapaksa.]

- 1 The Bib. Ind. reading is wrong. The Benares edition reads correctly guage,
- § Both editions read wow; but the we is clearly not wanted.

<sup>&</sup>lt;sup>o</sup> The objections against the term 'sca' being a qualification, are based upon the idea that the term means own, i. e., capable of being employed as one wishes. They should therefore cease if the term were explained as ' what is to be proved.'

<sup>†</sup> The Bauddha definition of Pakia being a: arataging ;' What is intended to be proved '.

If, on the other hand, pakes is not different from (but the same as) svapaksa, then any such assertion as 'svaparapaksayoh siddhyasiddhyartham vachanam vadah' (which is your definition of Discussion), would be an impossible one [firstly because the term 'parapaksa', would involve an internal contradiction, paksa being the same as svapaksa, the term would mean 'parasvapaksa', where para and sva are contraries; and secondly because the term 'svapaksa' would involve a superfluity, the qualifying term 'sva' being entirely superfluous, if 'paksa' itself be the same as 'svapaksa'] And no other compound (except the Genitive Tatpurusa, the Karmadhāraya and the Bahuvrihi) are possible in the term 'svapaksa' [So that it is absolutely impossible to have any such compound, in the present connection]. Nor can the term be taken as a sentence, [i.e., as a combination of syntactically related terms not compounded; for the simple reason that there are no syntactical terminations at all]. Thus the conclusion is that the term 'svaparapaksayoh' is absolutely abortive.

Let the question of the exact signification of the terms 'sva' and 'para', and also that of that relation of 'qualification and qualified' between the terms 'sva' and 'paksa'\* rest for the present. What we should like to know is—why you do not compound the words,—stating your definition in the form 'svaparapaksasid dhyasid dhyartham vachanam vāda da' (instead of 'svaparapaksasid dhyasid dhyartham vachanam vāda da' (instead of 'svaparapaksayoh, &c. &c.)? "What would be the advantage in this ?" The advantage would be that you would get at the same idea, and in a much terser form.

Some writers give the following answer to our question ;— "If we compound the words as suggested, then we have the absurdity of 'siddhi' establishing and 'asiddhi' (demolishing') applying to both (svapaksa and parapaksa)" This contention is not right; as this absurdity remains (even in the

<sup>•</sup> Both editions read स्वयरघन्द्वा: but the correct reading should be स्वयवधन्द्वि: ; what has been discussed is the relation between एस and पद and not between एस and पद.

form in which you have given your definition); and it is not avoided by not compounding the words ?\* "How?" In this way: The expression 'sv parapaksayoh siddhyasiddhyartham' also is capable of being construed as 'svapaksasiddhyasiddhyartham parapaksasiddhyasiddhyartham' [which would mean that siddhi and asiddhi, extablishing and "Such demolishing, apply to both svapakea and parapakea]. a construction would be inadmissible, on account of incapability (impossibility); that is to say, the compounded expression 'svapakşasiddhyasiddhyartham' (which enters into your explanation of the construction) is an impossible one; for the simple reason that it is beset with internal contradictions : For instance, if one makes an effort to establish an idea, it would be nugatory if the effort were also made to demolish it, and similarly if one makes an effort to demolish an idea, it would be nugatory if the effort were also made to establish So that it is absolutely impossible to construe both it. factors of the compound 'siddhyasiddhyartham' with each of of the two factors of the compound 'svaparapakeayoh']."

Our answer to the above is that, if the said absurd construction is not possible in the case of the uncompounded expression, and it is on that ground that the compounding is avoided, then, exactly the same may be urged in the case of the compounded expression (svapara-

pakşasiddhyasiddhyartham) also; where also the absurd construction, whereby both establishing and demolishing become applicable to both views, would be impossible [on the same ground of its involving internal contradictions].

Others have put forward the following reply (to our question as to why the definition is not stated in the compounded form)—" [If we had it in the suggested compounded form]. there would be a possibility of the Singular and Plural numbers; that is to say, if we had the compounded term ('svaparapaksasiddyasiddyartham'), as the exact number-

<sup>•</sup> दावीउसनास्त्रद्वन is the correct reading, as given in the Benares edition.

ending would not be clearly discernible in the body of the compound itself, it would be necessary to have the uncompounded form, in order to clearly indicate what the exact number intended is; otherwise, how could we know that the discussion is ' the assertion for the establishing and demolishing of the twoviews, one's own and another's svaparapaksayoh)and not that of one view or several views (svaparapaksasya or svaparapakşāņām)?" This explanation also is not right, we reply; as the contingency urged is an impossible one: as regards the possibility of the singular number, the form 'svaparapaksasya', it is absolutely impossible for any assertion to both establish and demolish the same single view\*;--secondly, as regards the possiblity of the plural number (in the form 'svaparapakşūnām', as a matter of fact it is absolutely impossible for any such notion to be ever entertained that any single inferential argument can ever prove several views :--- so that your suspicion as to the undesirable contingencies is entirely without foundation.

The third answer given to our question is that the law of compounding is not a compulsory one. These people dilate upon the fact that the rules laid down for the compounding of words are not meant to compel one to have recourse to compounding. They argue as follows :—" There is no such compulsory injunction that compounding must be done in every possible case; so that (the rules being merely permissive, in some cases we have the compound, and in others we have the words uncompounded, appearing with their own syntactical endings; e. g., we have both forms—'rajnah purusah' (uncompounded) and the compounded form 'rajapurusah'." Our answer to this explanation is that when both are equally possiblet, why should you have the uncompounded form (by preference)? When you assert that the laws of compounding are not compul-

<sup>•</sup> The Bib. Ind. reading is entirely corrupt. The correct reading is supplied by th Benares Edition-देवस्य तावस् विद्वविद्वयर्थं चयनम्

<sup>†</sup> The right reading is usin the Benares Edition.

sory, you mean that both (compounding and not compounding) are equally admissible; and when both are equally admissible,

why should you insist on using the uncompounded form? "We shall retort with the same question to you-Why should vou insist on the compounded form?-and there would be no end to such question and counter-question." Certainly there would be an end to the question as addressed to us: Our answer to your retort is that, we prefer the compounded form on account of its terseness; as a matter of fact, the compounded form is terse and the uncompounded form is diffuse; and as the use of verbal expressions is only for the purpose of comprehensively expressing ideas, it behoves you to explain for what purpose you employ the diffuser expression (when exactly the same purpose would be served by the "We do not accept the view that torser expression)? the terseness or diffuscness of verbal expressions pertains to the smaller or larger number of letters or syllables in This is no answer: as it does not meet the obthem." jection at all. By simply asserting that you do not admit terseness or diffusion to consist in the smaller or larger number of syllables, you do not get rid of our objection. " Why ?" Because your work, the 'Vadavidhana'.\*

"Why?" Because your work, the 'Vādavidkāna', is regarded as a 'shāstra', a scientific work, written for the instruction of pupils; and the contention that you do not admit terseness and diffuseness as pertaining to the number of syllables is very much out of place, in reference to such a work [which, being meant for the instruction of pupils, should not contain a single syllable more than what is absolutely necessary to convey the required idea]

[Having disposed of the first term 'svaparapakşayoh', of Subandhu's definition, the author takes up the criticism

-:0:----

<sup>•</sup> If with the Bib. Ind. edition we read **u:u: unit unit**, the meaning is 'the definition of Discussion'. **u:uuu** however is a Bauddha logical work already referred to above, on P. 121, and its **ctur** on P. 120. From this it would seem that this work is by Subandhu.

of the second term, 'siddhyasiddhyartham']—The term 'siddhyasiddhyartham'—' for the establishing and demolishing' —also is not quite right. "Why?" Beacause the 'siddhi',—' establishing'—cannot here be taken in either of the two senses that it admits of. To explain—The term ' establishing'—" siddhi'—when used, is used in two senses; —it means either (a) to manifest or (b) to produce.—(a) Now in the present connection it cannot mean producing; for in that case Proposition and the other reasoning Factors would cease to be 'sādhona' (the means of bringing about the 'siddhi' or establishing of things)†; as certainly things are not produced by Proposition, &c.; in fact when these latter are called 'sādhona', what is meant is that they

Vār : P. 157. bring to light what already exists; so that if 'siddhi' meant producing, the name 'sadhana' ('means of siddhi') would be wholly inapplicable to Proposition, &c.-(b) If, on the other hand, 'siddhi' is taken to mean mani. festing, this also will not be right; because as a matter of fact it subsists in the enquirer (the person who propounds the question to be discussed by the two parties). To explain -If you hold that 'establishing 'I means manifesting, and not producing,-this may be an effective way of meeting the objection urged (by us against the view that 'establishing' means producing); but it involves a contradiction in terms: as both 'establishing' and 'demolishing' consist in convincing the Enquirer or Questioner (the Umpire, one who propounds the question to be discussed by the two parties): so that the 'establishing' and 'demolishing' being in the form of the conviction produced in the Questioner's or Umpire's mind, they would subsist in the Enquirer ;- how then could they be spoken of as 'of the view' (as they are spoken of by you)? In fact it behoves you to explain the

+ The correct reading is urunw.uu.fu, as in the Benarcs edition.

1 'ferry' is rightly omitted in the Benares edition.

<sup>&</sup>quot;From what follows, 'are '-- the reading of the Bib. Ind. edition-- is clearly wrong.

exact meaning of the genitive ending (in the term 'sraparapaksayoh', as occurring in your definition). " Certainly it is not difficult\* to explain the sense of the Genitive; as the view is after all the subject-matter of both ; ' establishing' and 'demolishing' (being in the form of conviction) have a view for their subject-matter, and it is in this sense that they are spoken of as being 'of the view'." This is not quite right, we reply; at the time that these two, 'establishing' and 'demolishing', of which the view is the subject-matter, come about,---(a) is the view itself an already fully accomplished or established entity—or (b) is it not ? (a) If it is already an accomplished entity, then 'establishing' of the view cannot consist in the convincing of the Umpire [as ex hypothesi the view is an established entity even before this conviction is brought about]; in fact in that case 'establishing' would be that from which the conviction follows. "From what does It follows from the fact of the the conviction follow?" thing actually being as it is represented to be; that is, the Umpire becomes convinced of a certain view being true, when he finds that the thing in question is really as it is represented to be by that view. "How is one to know that the thing is represented as it really exists "? This is ascertained from the connection of the Instruments of of Right Cognition : that is to say, the thing is recognised as really being as it is represented to be only when it is found that the representation is in full accordance with what is indicated by the Instruments of Right Cognition.+--(b) If, on

• 'n gan:' of the Benares edition is more in keeping with what follows than 'a gan;' of the Bib. Ind. edition.

*†* The *Tatparya*—A View is said to be *established* when it becomes related to *establishing*; and *establishing* consists in its having the support of the Instruments of Right Cognition; this means that the thing is really as the view in question represents it to be; and it is from this that there follows the 'conviction of the enquirer'. That is, the enquirer is convinced of the correctness of the view, because the thing in question is really as that view represents it to be. So that it is not true that the 'establishing' of the view consists in the convincing of the enquirer. And

the other hand, the view is not an established entity, at the time that its 'establishing' comes about,-then this would mean that the convincing of the enquirer (which, according to you, is 'establishing') is brought about before the use of the means of establishing (i. e, the proofs, that would make the view an established entity); and under the circumstances there would be no need for the Discussion [which would consist in the putting forward of these proofs, with a view to convince the enquirer ; so that when this convincing will have been brought about before the proofs are put forward, what would be the use of putting these forward at all ?]. And further, it may be that the 'establishing' of a view consists in convincing the enquirer ; but how about 'demolishing '? It has been shown above that criticism or fuult-finding (which is held to be the means of (demolishing) does not actually bring about the demolishing of the other view.\* "What fault-fin ling does is to set aside the proving or establishing of the other view; and it is the setting aside of the establishing that is indirectly spoken of as 'demolishing." You mean to say that whenever criticism is propounded, what it does directly is to set aside the establishing of the criticised view, and on the ground of its setting aside the establishing the criticism may indirectly be said to bring about the demolishing of the view. But this will not be right; as there is no necessity; the direct signification of a term is not renounced unless there is some necessity for it; in fact we admit of indirect significations only when the direct signification is found to be an impossible one ; e. g., in the well-known instance of the expression 'the platforms are crying' [where we take the word 'platforms' to indicate the men on the

as it is shown that the conviction of the enquirer is not the same as 'establishing', but follows from it, it involves a 'contradiction ' to say that ' the establishing of the view consists in convincing the enquirer.'

<sup>•</sup> The Bib. Indica edition reads **TAURIE**: in place of **TAURIE**:. The sense of the argument, with the former reading, would be that the criticism of one view does not establish the other view ; and it is only if it did so that it could be said that the criticism also brings about the enquirer's conviction.' But from what follows it is clear that the correct reading is **TAURIE**:

platforms, because it is found that the 'crying' of the platforms themselves is an impossibility |. Then again, 'indirect signification ' is a contrivance for explaining the meaning of ordinary assertions in ordinary popular parlance; and certainly the sentence under consideration-viz: your definition of Discussion as 'assertion for the purpose of establishing and demolishing one's own and another's view '-is not an ordinary assertion in popular parlance [occurring as it does in a scientific treatise]. Others (with a view to escape from the said difficulties attaching to the acceptance of the indirect signification of the term 'demolishing') offer the explanation that the 'demolishing' of a view consists in its not making known or recognised what it asserts [i. e., when a certain view asserts a fact, if it fails to carry conviction and does not make that fact recognised, it is said to be 'demolished '] • But in this case also, if this 'not bringing about the conviction of what is asserted ' refers to the convincing of the enquirer, then the objections already urged remain in force.

Var: P. 158.

"What do you mean ?" What we mean

is that the term 'demolishing of the view' would be open to the objections that have been urged against the 'establishing' of the view. Thus then [if you use the terms 'establishing of the view,' and 'demolishing of the view,' you must admit that] 'establishing' and 'demolishing' are two properties belonging to the 'view,' in virtue of which (properties) the 'view' comes to be spoken of as 'established' and 'demolished'. And such being the case, this would certainly be against your assertion that 'establishing' and 'demolishing', being in the form of knowing and not knowing, subsist in the person (the enquirer). That is to say, if 'establishing' and 'demolishing' are pro-

<sup>•</sup> So that, in this case, 'demolishing' does not consist in being subject to fault-finding (as in that case it could not pertain to the view); it consists in its failing to bring about the required knowledge or conviction; and this certainly pertains to the view; and there is no renouncing of the direct signification of the word 'demolishing.' -Tatparya.

perlies of the view, then it is wrong to say that they subsist in the person. If, with a view to save this last assertion of yours from being rejected, you insist upon asserting that 'establishing' and 'demolishing' do subsist in the person,then in that case, your other assertion,-that 'establishing' and 'demolishing' are the manifestation and non-manifestation of the view-becomes wrong, and rejected. "We shall then explain 'establishing' as being true (i. e. being shown to be exactly as known by means of the Instruments of Right Cognition) and 'demolishing' as being untrue (i. e. being shown to be not as should be known by means of the Instruments of Right Cognition)." In that case also, it becomes wrong to say that 'establishing ' and 'demolishing' consist in convincing the enquirer. [In sheer despair, and being honestly anxious to know what the correct view would be, the Opponent asks.]--" What then is meant by 'manifestation' and 'non-manifestation'?" The Author makes a friendly answer]-These are only the names of those properties in virtue of whose presence things come to be spoken of and recognised as such ; i. e., 'manifestation' and 'non-manifestation ' are just those properties of things on account of whose presence things come to be spoken of and recognised as ' manifested' and 'unmanifested'.\*

Then again, no adequate explanation can be found of the word 'artha', 'Purpose' [as occuring in Subandhu's definition of Discussion as 'svaparapaksayoh siddhyasiddhyartham vachanum']; as none of the meanings possible is admissible in this connection. In the present context, the word 'artha or 'purpose' could have only one of the following three meanings—(a) aim or benefit, (b) motive, (c) denotation

<sup>•</sup> Though 'manifestation' and 'non-manifestation'—consisting of being operated upon by the right instruments of cognition, and in not being so operated upon,—may be said to belong both to the Thing and the Person, yet the said characters are always recognised and spoken of as belonging to the *Thing*; and for this reason, they are regarded as the properties of the Thing, and not of the Person.— *Tatparya*.

or meaning; (a) we have the word 'artha' used in the sense of 'benefit', when we speak of rice being 'brahman  $\pi rtha$ ' (for the purpose of the Brahmana); and [it has been asserted by the Bauddha writer that] in this meaning we include all the four kinds of assertion (proof, criticism, seeming proof and seeming criticism);—(b) we have it in the sense of 'motive' when we ask a man kimartham  $\exists gatosi$  ('with what motive have you come?);—(c) and we have it in the sense of 'meaning', when we put the question 'gaurityabkidhānasya korthah' ('what is the meaning of the expression gauh?').

(a) In the present context it is not possible for the word 'ārtha' or 'purpose' to be taken in the sense of aim or benefit; because of the qualifications 'Right and Wrong' (that another passage in the Bauddha work has added). That is to say, 'one's own view' has been characterised as 'right' and 'another's view' as 'wrong'; such being the qualifications added, how can the sense of 'benefit' fit in with this? Certainly the qualifications 'right' and 'wrong' cannot apply to the seeming proof and the seeming criticism, --- 'rightness' consisting in being supported by proofs and 'wrongness' in being open to criticism [and not in being supported by seeming proofs and being open to seeming criticism]. [With a view to avoid this difficulty] it may be held that what is meant by views being 'right' and 'wrong' is (not that it is 'supported by proofs' and 'it is open to criticism', but) that 'the thing really exists as the view represents it to be' and 'it is not as the view represents it': so that rightness consists in the thing being really as it is asserted to be; and 'wrongness' in its not being so. But in that case, as this fact (of the view representing or not representing the thing as it actually is) would be an object of knowledge,-the explanation you have put forward would be clearly incompatible with your theory that the purpose of the Discussion consists in convincing the enquirer as to the view

<sup>•</sup> Neither editio \_ gives the correct reading. From the Tatparya it is clear that the correct reading is **unwing**:'

being right or as wrong; for what is an object of conviction cannot constitute the conviction itself [so that 'rightness' and 'wrongness' being *objects* of cognition, it will not be right to speak of them as 'right', or as 'wrong'.]\*

(b) If the word 'ar/ha', ' purpose' be taken to mean motive, -then also the person putting forward seeming proofs or seeming criticisms cannot be said to be a true controversialist (carry-" Why ?" ing on 'Discussion') For the simple reason that 'establishing ' and 'demolishing ' can never be the motive (i. e. consequence) of seeming proofs and seeming criticisms [when a man wishes to prove a fact, he brings forward real, not seeming, proofs]; and certainly no 'establishing' can ever form the motive of urging seeming proofs, nor 'demolishing' that of urging seeming criticisms; - and the person urging these would not be a true controversalist; so Vār : P. 159. that your explanation brings about the absurdity that one who has been defeated (by being shown to have brought forward seeming proofs and seeming criticisms) is a person who was not a controversalist,--i. e. not a party in the Discussion !

(c) Lastly, if the word 'artha', ' purpose,' be taken to mean denotation or meaning,—this also will be unacceptable; as the exact nature of that denotation can not be determined; specially as neither your Sntra-writer (in his  $V\bar{a}davidh\bar{a}na$ )

<sup>•</sup> It has been argued by a Bauddha writer that the word 'purpose' has to be taken in the sense of aim, as it is then alone that we are able to include all the four kinds of assertion possible in the course of Discussion—Proof, Criticism, Seeming Proof and Seeming Criticism. Our contention, says the *Tatparya*, is that the inclusion of all these has been rendered impossible by the subsequent addition of the qualifications 'right and wrong'; one's own pake or view being characterised as 'right' and another's view as 'wrong'; now all assertions embodying all proofs and seeming proofs would be in support of one's own view, and all criticisms and seeming criticisms would be against another's view ; but the view that would be supported by a seeming proof would not necessarily be the 'right view'; similarly the view that would be attacked by a seeming criticism, would not necessarily be the 'wrong' view ; hence having added the qualifications 'right and wrong', the Bauddha has made the inclusion of the seeming proof and seeming criticism impossible. This eing so, there is no point in taking the word 'purposo' to mean aim.

nor the  $Bh\bar{a}sya$ -writer in his ( $V\bar{a}davidh\bar{a}na$ -tik $\bar{a}$ ) has vouchsafed any such explanation as that such and such 'denotation' is expressive of 'establishing and demolishing.' "Certainly it has been declared (by the Bhasyawriter) that that which is capable of expressing the establishing and demolishing constitutes their denotation<sup>\*</sup>." True such an explanation has been given; but according to this explanation the use of the actual words 'establishing and demolishing' would come to constitute Discussion [as these words are par excellence 'that which denote establishing and demolishing.']

*†* No other meaning of the word '*artha*', 'purpose', (except the three just considered) is possible in the sentence in question. So the conclusion is that the use of the word in the definition is entirely improper.

Further, when propounding the definition in the form —'Discussion is assertion for the purpose of establishing and demolishing, &c. '—the writer did not properly examine what he had said before and what he was saying now. For in view of what he had said before, the word 'assertion ' (as occurring in the proposed definition) would clearly be that which had been put forward against the (orthodox) Logician's reasons; while the aphoristic style in which the definition has been put forward gives to it the appearance of a generalised axiom; from which it would seem that a/l 'assertions' were meant to be included. ‡ And this certainly constitutes a self-nugatory procedure.

<sup>&</sup>quot; The Benarcs Edition reads ' बायबागित ' which is better than ' बायबतेत '.

<sup>+</sup> E. g. The word 'artha' also means property; but that cannot fit in with the definition of Discussion. The *falparya* begins this sentence with ' $\neg \neg \neg \neg \neg \neg$ ' instead of ' $\neg \neg \neg \neg \neg \neg$  as meaning ' in the Bauddha writer's Sūtra'.

<sup>&</sup>lt;sup>‡</sup> The exact meaning of this whole sentence cannot be clear without reference to the actual text of Subandhu's work. But it is clear that the general sense is as expressed in the translation. The reading '**UNE**' **UNE**' of the *Bib. Ind.* edition is better than '**UNEUNE**' of the Benares edition.

Thus it is proved that when we come to consider the words of Subandhu's *Sutra*, we find that they contradict his own philosophical tenets and also go against all well-known conceptions.

It has been shown that the words of the Sūţra (of Subandhu) are entirely incapable (of affording the correct conception of what 'Discussion' is); we next proceed to show how the same is the case with the words of the commentary on that Sūţra :--

(A) In the first place, the compound 'svapaksa' of the original has been explained by the Commentary as 'svasya paksasya'; and this is not right; as we have already shown (above, P. 152) that no satisfactory explanation of the term 'sva' is available; every possible meaning of the term 'soa' having been shown to be impossible, the use of the expression ' svasya paksasya' is highly improper. \* In support of the expression 'svasya paksasya' it might be urged that the Dual form of the Genitive and Locative being exactly alike (as in the word of the original ' svaparapaksayoh)', the expression 'svasya paksasya' has been added with a view to show that it is meant to be Genitive (not Locative). But this explanation itself will not be right; as it is impossible for the word to be construed as Locative; that is to say, apart from the paksa (View) itself there is nothing to be established, of which the paksa could be the receptacle (and as such be spoken of by means of the Locative ending in 'pakeayoh'); so that there is no possibility of the word being construed as Locative. + That being not possible, any specification (of the Genitive) is absolutely uncalled for.

<sup>•</sup> The correct reading is ' watsymm,' as in the Benares edition, and not ' watsy ' as in the Benares edition.

 $<sup>\</sup>dagger$  What is to be established is a certain idea or conception; and the receptacle of ideas, according to the Logician, is the Soul; while according to the Bauddha Ideas have no receptacle. So that in either case the *pakea* could not be regarded as the receptacle of the establishing.—T.ltparya.

(B) Secondly, it is also wrong to add the qualifying term 'yukțāyukțayoh', 'right and wrong' (to 'sraparapukşayoh' of the original); as none of the alternative explanations (of 'right and wrong') that are possible can be accepted in the present connection. For instance, in what do 'rightness and wrongness' consist ?--(a) Do they consist in proof and criticism ?-or (b) in the connection with proof and criticism? -or (c) in the fact of the thing being and not being as repre-(a) In the first place proof and criticism cannot sented ?\* constitute 'rightness and wrongness', " Why ?" Because proof and criticism have been mentioned separately (by the Bauddha writer); the writer himself says · le sadhanadusanaih' ' these (i. e, the rightness and wrongness) are due to proof and criticism', -where proof and criticism are mentioned as entirely different. If the terms 'right' and 'wrong' denoted proof and criticism (respectively), they it would be superfluous to have the additional sentence in the form 'le sadhanadasanaih'; as the 'proof and criticism ' will already have been included in the pronoun '13' (which, according to your explanation, stands for rightness and wrongness; so that the further mention of 'proof and criticism' would be superfluous). "The expression 'these are due to proof and criticism' is meant to qualify and specify the rightness and wrongness [the sense being that

Vār: P. 160. Vār: P. 160. the particular kind of *rightness* meant is that which is ascertained by the fact of there being proofs in support, and wrongness is ascertained by the fact of being open to criticism; so that 'rightness and wrongness' and 'proof and criticism' are not exactly synonymous]." This explanation will not hold; as in that case you should have the nominative case-ending; if the Sūțra, 'these are due to rightness and wrongness' were to qualify the 'rightness and wrongness', then the proper case-ending would be the nominative, and the Sūțra should read as '*le sūdhanadūṣanāni*';

<sup>•</sup> The right reading is auiSadia.

for example, when we have the relation of qualification and qualified,-as we have between 'nila', blue and 'kamula,' lotus, we do not have the form 'nilam upalaih' (with the Instrumental ending).\* (b) "What is meant is the connection with, or presence of (proofs and criticism); that is to say, the connection with proofs constitutes 'rightness' and the connection with criticism constitutes 'wrongness' [and this sense would not be got if we had the nominative caseending]." This is not right, we reply; as it can not be definitely indicated; that is to say, it can not + be indicated (by the Bauddha writer) that the connection with ' proofs and criticisms' is of such and such a kind. [For 'connection with proof' can only mean 'the presence or existence of that which proves what is to be proved'; and similarly ' connection with criticism' can only mean 'the presence or existence of what vitiates that which is to be criticised'; in both cases real existence of certain things is implied; and no such real existence of anything can be admitted by the Bauddhal. In fact the expression 'sādhanēna yogah', 'connection with proof', can be used only when the exact denotation of these words has been ascertained; and when this has been already ascertained, there is no further necessity of propounding 'proofs.' And further (if 'rightness and wrongness ' consist of connection with proof and criticism, then) the convincing of the Umpire would not be by means of ' rightness and wrongness '; so that what you say now would contradict your assertion that 'the convincing of the Umpire is by means of rightness and wrongness.' The conclusion therefore is that 'rightness' and 'wrongness' cannot be rightly held (by you) to consist in (c) "Well, then, connection (with proof and criticism). we shall take 'rightness' and 'wrong' to consist in the

<sup>•</sup> It may be noted that the form analogous to 'yukţāyukţaţvē-ţö sādhanadāşanaih would be 'utpalam nīlaih '.

<sup>+</sup> An additional w is necessary here ; as found in the Benares edition.

<sup>‡</sup> The sense of this rather subtle argument is thus explained in the *T&tparya* :---The Bauddha will perhaps say that even though he cannot admit the *real* existence of

fact of the thing actually being and not being (respectively) as represented." This also is not admissible; as in that case the sense of *instrumentality* would be impossible. That is to say, the *rightness* and *wrongness* that would consist in the *thing being and not being as represented* would be something to be determined (the object of the action of *knowing*); and they would not be the means of determining; so that not being *instruments*, they should not take the Instrumental ending (in *yukţāyukţaţvēna* of the Bauḍdha's Sūţra), and the correct form would be '*yukţāyukţaţvaşya*' (with the Genitive ending).

(C) Thirdly, it is not right to speak of the 'convincing of the Umpire'; as this is incompatible with the avowed purpose of your treatise. In course of your explanation of the purpose of your treatise, you have declared that-"the treatise has been written for the purpose of removing doubts, and misconceptions"; and certainly when you go on to assort that "establishing and demolishing consist in the convincing of the Umpire", you are clearly unmindful of what you have said in the former passage; for in the Umpire's mind there are no 'doubts and misconceptions',--- what he puts forward being a definite assertion always affording a well-defined and correct conception; so that the Umpire does not stand in need of being 'convinced'. As regards your contention that-"the convincing of the Umpire will naturally lead to the convincing of the disputant also; as, it is entirely on account of his undue attachment to his own view that the

anything, yet it is possible for him to admit their *illusory* or *imaginary* existence; and this will suffice for the conception of 'connection with proofs'. But our contention would, then, be that even so the determining of the exact meaning of the expression 'connection with proofs' will depend upon the ascertaining of what is 'proof' and what is to be proved; so that 'what is to be proved ' will have to be definitely known before we can have the conception of 'connection with proof'; this will mean that the conception that a certain fact *is proved* will have to be present long before there can be any conception of 'connection with proof'. But when it will have been already known that a certain fact *is proved*, where will be the necessity for propounding any further proofs, or of pointing out its' connection with proof'?

disputant fails to grasp and perceive the true thing even though present before his eyes [so that when the Umpire has been convinced, the convincing of the disputant follows as a matter of course]",---what we find is that your phrase "fails to grasp the true thing even though present" involves a self-contradiction;\* for if a thing is cognised (by an honest and fully capable person) as otherwise, how can it be called true '? "But it may be that even though grusping the fact, he does not accord his consent to the other party". Even so, it will not be not right to say that he does not grasp it (when, as you say, he actually does grasp it). + Further, you say that "the convincing of the Umpire will Var : P. 161. lead to the convincing of the disputant";-but this is not possible; as the means 1 of conviction are different: as a matter of fact, the means whereby the Umpire is convinced are entirely different from those by which the disputant could be convinced; and certainly an instrument bearing upon one cannot bring about its action (or effect) in another. The said assertion is not right for

the further reason that what is asserted is not right for the further reason that what is asserted is not necessarily true; there is no such hard and fast rule as that Discussion is carried on for the purpose of convincing the Umpire; as Discussion is often found to be carried on with one's Teacher and such other persons,—in which case there is no Umpire at all. "But when the man is not merely desirous of getting at the truth, but enters into a Discussion

<sup>9</sup> As a matter of fact, if a man is fully equipped with the requisite mental capa city, and approaches the question with a calm, unbiassed and intent mind, he cannot fail to grasp the real nature of the thing, after the operation of all the instru; ments of cognition bearing on that thing. [A::d the disputant who is a party to an honest Discussion is exactly of the kind described.]—Tatparya.

+ And further the 'attachment to his own view' is not possible in Discussion, when both parties are free from all such undue prejudice; nor is there a desire for mere victory over the other party; the motive being only ascertainment of truth; so that when the truth has been ascertained, there is no possibility of due consent not being accorded.— $T\bar{a}$  the party of the party o

I The Benares Edition throughout reads are; but the Tatparya has are.

with a desire for reward, honour and fame,-there is certainly the necessity for an Umpire." True in such a case an Umpire would be necessary; but it will not be a case of "We cannot accept this; as we do not · Discussion '. accept the threefold division of Controversy; all Controversy is the same; and its purposes are several-in the form of getting at the truth, reward and so forth." This contention is not right; as in the first place what you are putting forward now has been prohibited: you have yourself prohibited the holding of 'Discussion' for the man desirous of obtaining praise, honour and reward; and secondly, as for your contention that you will not accept our view because you do not accept the three-fold division of Controversy,the actuality of things does not depend upon non-acceptance\* (or acceptance); in fact (it is the other way) the acceptance follows when the thing actually exists; and that there actually are three kinds of Controversy, we shall prove by showing that both Disputation and Wrangling differ, in their character, from Discussion. Hence we conclude that it is on account of your ignorance of this distinction among them that you say you do not accept the threefold division.

(D) Fourthly, it has been asserted that—"the term 'puksusiddhi', 'establishing of the view', indirectly indicates (i. e. figuratively expresses) the conviction with regard to the establishing of the view; just as the contemplation of the Void is indirectly indicated by the term 'void.'" But (it seems to have been forgotten that) figurative expression (or indirect indication) is not arbitrary; such indirect indication is permitted only when the expression is one that is met with in common usage, and yet its literal signification is found to be an impossible one (lit. not supported or vouched for by any right cognition)†; and further we have also shown above, (Text,

<sup>•</sup> Both editions read margunation; but from what follows, the correct reading would appear to be myganaten;

p. 153, l. 11) that it is not right to make use of figurative expressions in the body of a definition.

(E) Fifthly, you go on to add the following explanation :--- "When it is said that Discussion is assertion for the purpose of establishing &c. &c., it is meant to include the four kinds of assertion---of proof, of seeming proof, of criticism and of seeming criticism." This again is not right; as you have qualified the whole thing by the terms 'right and wrong '; and with this qualification, how can there be any inclusion of the four kinds of assertion ? [as 'seeming proof' or 'seeming criticisms' cannot bring about right establishing or right demolishing].

(F) Sixthly, you make use of the term 'adhikarana'; this must (in the present context) refer to 'one who has been appointed, adhikritah, by the two disputants'. But in a Discussion there is nothing of which the Umpire so appointed could be the receptucle \* [and unless he is a 'receptacle', he cannot be spoken of as 'adhikarana', as it is a dictum accepted by all that 'adhikaruna is the ādhāra, or receptacle']. "But the Umpire can be called 'adhikarana', as being the receptacle of the conviction (produced by the Discussion)." This is not right; as we have already refuted this view; we have already answered this contention by pointing out that the conviction is with regard to the view, and not with regard to the Umpire. "But there is discussion (and consequent conviction) only during the existence of the Umpire [i. e. when the Umpire is there; so that in this sense he could be called 'adhikarana', which also stands for the Locative Absolute, which signifies during the existence of ]. " This is not possible; as Discussion is actually found to take place in other circumstances also; (i. e. even Vár : P. 162. during the absence of the Umpire) Discussion is held with the Teacher and such other per-"But in such a Discussion (where there are no sons.

<sup>•</sup> जारिनकापारन of the Benares edition is the correct reading.

Umpires<sup>•</sup>) it is necessary to explain (a) what would be the investigation, (b) of what it would be, and (c) where (between whom) it would be." But it is well-known that (b) the investigation is of *Discussion*, which consists in the putting forward of proofs and criticisms with regard to the establishing of a certain conclusion; - (a) its 'investigation ' consists in the due discernment of the real proof from the seeming proof, and of the real criticism from the seeming criticism;—and (c) to this investigation both parties are entitled (*adhikrifa*); so that [the only '*adhikaraṇa*' possible in Discussion consists in the two parties; and] there is no room for any other kind of 'Locative' (in the shape of '*adhikaraṇa*', in the form of the Umpire).

(G) Lastly, (in your work) you have urged the objection that the definition suggested by you may make the name applicable to the agreeable and disagreeable expressions used by the Umpire and the disputant (in course of subsequent brawling in the streets),-and then you have tried to answer this objection. But as a matter of fact there is no room for any such objection at all; (1) as no such street-brawling could have any direct bearing on the establishing and demolishing of the views under consideration,-(2) as the addition of the qualifications 'right and wrong' (excludes such brawling). And in trying to answer such an incoherent objection, you have surrendered yourself.<sup>+</sup> For the objection has absolutely no connection with what has been said before (i. e. the term ' for the purpose of the establishirg and demolishing') and after (i. e., the subsequent qualification ' right and wrong'). In fact if you found it necessary to answer even an incoherent objection, all that you should have said was that the objector had not understood the original Sutra (of Subandhu embodying the definition).

<sup>&</sup>quot; The Tatparya appears to make this - यदि प्रादिनका ज जालित a part of the Text.

<sup>†</sup> An incoherent question can be put only by a sonseless person; and it draws an answer also only from a senseless person; so that by seeking to answer the objection, you have proved yourself to be senseless.

Thus we find that the Satra (of Subandhu) along with its commentary is not compatible with reason; so that we should accept that definition which (as propounded by Gautama) has been shown to be entirely reasonable.

# Sūţra (2).

# Jalpa-Disputation.

DISPUTATION IS THAT WHICH IS ENDOWED WITH THE SAID CHARACTERISTICS AND IN WHICH THERE IS SUPPORTING AND CONDEMNING BY MEANS OF CASUISTRY, FUTILE REJOINDER AND CLINCHERS (ALSO). (SO. 2)

# Bhāsya on Sū. 2.

[P. 50, 1, 6 to 1, 21.]

• In which there is supporting and condemning by means of casnistry &c.'-i.e. the peculiarity of Disputation (as distinguished from Discussion) lies in this that here the supporting as well as the condemning are done also by means of Casuistry, Futile Rejoinder and Clinchers.

An objection is raised—"As a matter of fact, no supporting of any thing is ever done by means of Casuistry, Futile Rejoinder and Clinchers; all these serve the purpose only of condemning (or opposing) things; as is distinctly expressed in their general definitions as well as detailed classifications: For instance, the general definitions of these (as provided in the  $Ny \bar{u} ga - Sa (ra)$  are—(a) 'Casuistry consists in opposing an assertion through the assumption of an alternative meaning' (1. 2. 18),—(b) 'Futile Rejoinder consists in opposing an assertion through similarity and dissimilarity', (1. 2. 10),—and (c) 'Clincher consists in the indicating of the disputant's misunderstanding and failing to understand the point at issue'. (1. 2. 19); and in the detailed classification of each of these also it is clear that every one of them serves the purpose of only opposing assertions. There is nothing in the Sutra as we have it from which one could understand that Casuistry &c., serve to support conceptions through opposing (their contraries); this sense could be got at only if we had the Sūtra in the form that 'in Disputation, opposing is by means of Casuistry, &c.' (dropping the term 'supporting' altogether)."

[The answer to the above objection is as follows]-As a matter of fact, both supporting and condemning are done by means of proofs; and Casuistry. &c., come in only as auxiliaries, serving the purpose of guarding one's own view; and they never, by themselves, serve as the means of sup-That is to say, when a person supports porting. bv ineans of proofs, Casuitry, Futile Rejoinder and Clinchers are employed as auxiliaries,\* serving, as they do, the purpose of guarding one's own view; as a matter of fact, whenever these are employed they guard one's own view by attacking or opposing the other view. This is exactly what is declared later on in the Sutra-' Disputation and Wrangling serve the purpose of safeguarding the conception of truth-just as the fencing of thorny boughs serves the purpose of safeguarding the sprouting of seeds.' (4-2-50) Similarly when a person condemns a counter-conception by means of proofs, if he employs Casuistry &c., they become helpful in setting aside or warding off the attacks that might be made against that condemnation. So that Casnistry, &c., are employed only as subsidiary auxiliaries; [there is this difference, however, that] as regards supporting, they never by themselves serve as the direct means (always serving as subsidiary auxiliaries),-but as regards condemning, they do by themselves, serve as the direct means also.+

VARTIKA ON SOTRA-(2).

# [P. 162, L. 11 to P. 164, L. 14.]

<sup>4</sup> Disputation is that which, §c. §c.'—says the Sūtra. The meaning is that Disputation has all the aforesaid characteristics of Discussion, and (in addition) it is that wherein supporting and condemning are done by means of Casusitry, Futile Rejoinder and Clinchers also.

<sup>•</sup> The words बर्ध्य क्रमावां वाष्ट्रभावः । वत् वत् प्रपापिर्वस्य वार्थ्यं तम दस्तवाविति वदस्य जानावसूनमावः दवददप्रवः वत्व are wanting in the Puri manuscript ; but this must be due to सेसबावाद, caused by the same word रच्यावरवातु occurring twice.

<sup>+</sup> The Variaba has taken exception to the whole of this question and answer in the Bhalaya, It is interesting to note that the **MINUTATION** takes **MINUTATION** as **MINUTATION** as **MINUTATION**.

"It is not right, says the Opponent, "to say that Disputation is endowed with the said characteristics ; for the restriction in regard to only particular Cliuchers being employed (that has been laid down in regard to Discussion) is not held to apply to Disputation. If the definition of Disputation is stated in the proposed form, it would read thus \*-- ' Disputation is that assertion of conception and counter-conception in which supporting and condemning are by means of proofs and reasonings, which is not opposed to the main doctrine, which is carried on in due accordance with the method of reasoning through five Factors, and in which supporting and condemning are done by means of Casuistry, Futile Rejoinder and Clinchers';-and it will not be right to define Disputation thus; because, with regard to the two terms 'not opposed to the main doctrine ' and ' carried on in accordance with the method of reasoning through the five factors', it has been pointed out (by the Bhasya on the preceding Sūtra) that they serve the purpose of restricting the number of Clinchers to be employed in Discussion, out of the whole lot of Clinchers whose admissibility would (in the absence of these two terms) be indicated by the term 'condemning'; so that in the said definition the two terms-' not opposed to the main doctrine' and 'carried on in accordance with the method of reasoning through the five Factors'-serve the purpose of restricting ;as a matter of fact, however, so far as Disputation is concerned, there is nothing to be restricted [as it admits of the the employment of all Clinchers]; so that the two terms, being as they are only for the purpose of restricting the number of Clinchers, should not be transferred or introduced into the present definition. For these reasons, it is Var : P. 163. not right to say that Disputation is 'engowed with the said characteristics.""

There is no force in this objection, we reply. Firstly, the transference of qualifications depends entirely upon plausibi-

<sup>•</sup> The un in 1 16 is entirely superfluous.

lity; so that only that much of the 'said characteristics' would be transferred (to the present definition) as is found to be applicable. "What is thus applicable ?" The qualification-" in which supporting and condemning are done by means of proofs and reasonings'-is what is quite applicable (to Disputation); so what is meant by saying that Disputation is endowed with the said characteristics is that it has all these qualifications which are directly mentioned in the definition of Discussion [and not those that are only implied by the particular conditions peculiar to Discussion only; and the said ' restriction' belongs to this latter category). Instances of this method of transference of qualifications are found in the Sütra of another philosophical system also : For instance, we have the two Vaishesika-Sūtras-' The perception of colour is due to inherence in several substances and to the peculiarities of the colour' (4-1-3), and 'this explains the perceptions of taste, odour and touch '(4-1-9). where  $\int what$  is mentioned in the former Safra is said to apply to the latter Safra also : and yet] the 'peculiarity of colour' of the former is not transferred to the latter : the 'inherence in several substances' being the only qualification that is so transferred, and this simply on the ground that this is the only qualification that is found applicable to the latter case.<sup>¢</sup> Exactly in the same manner, in our present context, that much alone can be transferred (from the former Sütra) as is found applicable (to the latter); and what is applicable is only what is directly mentioned as the characteristic of Discussion; so that this is all that is transferred (to the present Sūțra), and not the restriction implied by the two terms : for the simple reason that there is nothing to be restricted. Or.

<sup>•</sup> The reading of this whole passage, in the Bibliotheca Indica edition is corrupt; in L 4 'ready request' should be read in place of 'ready waves'. In line 6, 'waves' fairs: wavesing '--though found in both editions-would give better sense if read as 'w wavesing '-- the peculiarity of colour' is not transferred because it is not applicable.' But in the translation we have adopted the reading as it is, and attributed to it the only scuse that it can give.

secondly, we may expound the compound ' yaihokiopap innah ' as 'yathohtopapannena upapannah'-one 'upapanna' being elided on the ground of its being got at by implication from the single term 'upapanna'; just as we have the compound 'gora hah' [which stands for ' gabhih yukto rathah,' the 'yukfah' being eilded, on the ground of its being got at by implication.] [The torm 'yathok topapannah', as thus expounded, will mean endowed, upapanna, with what has been directly mentioned, yathoktopapanna, ; i.e., endowed with those characteristics that are directly mentioned in the preceding Sutra, and not with those that are only indirectly implied]. "How do you get at this meaning?" We obtain it, as has already been explained, on the strength of the possibility of application ; as a matter of fact there is no possibility in Disputation of the restriction implied by the two words ; so that these, as such, can not be transferred (to its definition).

"If such be the case, then how do you justify the Bhāṣya [which apparently transfers the entire definition of Discussion, along with its implications, to the definition of Disputation]?" There is no force in this objection; as all that the Bhāṣya does is to explain (what is indicated directly by) the sequence of the two Sūţra-texts,—the sense being that what is to be transferred to the latter Sūţra is only that which is directly stated in the former as the definition [and this does not bring in the implications at all].

[The Bhays, p. 50, l. 9 et.-seq. has raised the question as to Casuistry & c., being incapable of supporting any conclusion, and has answered it by pointing out that these are auxiharies to proofs, serving the purpose of safeguarding one's view from attack. The Varfiks takes exception to this, and represents, as follows, the view of the critic]—No supporting (proving) or condemning (disproving) of any view dan be done by means of Casuistry, Futile Rejoinder and Clinchers; as every one of these is a kind of improper answer. For instance, Casuistry can never serve the purpose of supporting

or condemning any view, for the simple reason that it is an improper answer; Casuistry is a form of answer that is highly improper; and being so, it cannot do any supporting (proving) or condemning (disproving). Similarly with Futile Rejoinder (and Clinchers). "But these serve as auxiliaries; that is to say, when a certain proving or disproving is done by means of proofs and reasonings, Casuistry, Futile Rejoinder and Clinchers are brought in for the puropse of safeguarding it, whereby they come in useful as auxiliaries."\* But this explanation also is not acceptable; for the same reason of Casuistry and the rest being improper answers [no real safeguard can be provided by what, by its very nature, is improper and wrong, and which, therefore, cannot be a useful auxiliarv].+ "For what purpose then are these employed? If Casuistry, Futile Rejoinder and Clinchers cannot do either proving or disproving, and if they cannot come in as useful auxiliaries,-then for what purpose would they be employed at all?" They are employed simply for the purpose of demolishing the arguments of others; that is to say, Casuistry &c. are employed only by a disputant who is carried away by the idea of demolishing the arguments that have been put forward. 1 That controversy wherein Casuistry, Futile Rejoinder and Clinchers are (consciously) employed, is not a Discussion at all. But this should not Var. P. 164. be understood to mean that Casuistry. Futile Rejoinder and Clinchers are either true proofs or

• This is the answer that has been given by the Bhāşya.

† The Benares edition reads security for aquiver is. The former would mean 'On account of the answer that we have already given.' The Bib. Indica reading gives clearer sense.

 $\ddagger$  In Discussion proper, Casuistry &c. are absolutely incapable of even obstructing a proof; but a person might employ them, when, in his anxiety for obstructing the proof put forward by the other party, he fails to realise the fact of their being *improper answers*. If, however, he is conscious of their being improper answers, then he cannot employ them in a Discussion; such conscious use of improper answers being possible only in Disputation and Wrangling [where even though, being improper and wrong, they cannot actually do any proving or disproving, yet they suffice to accompliab the discomfiture of the other party.]—*Talparya*.

auxiliaries (in the other two forms of Controversy, Disputation and Wrangling); for the exact circumstances under which Casuistry &c come to be employed (during Disputations and Wranglings) are as follows :--When a right proof has been adduced by one party, the other has his mind confounded by that fact, and (while in this confused state of mind, and unable to bring forward the proper answer) he puts forward Casuistry and the rest. \* with the hope that his opponent might be upset by the Casuistry &c. and thus become defeated in the Disputation [securing to himself the victory that is the sole motive of Disputation or Wrangling]. Casuistry and the rest, therefore, are never to be employed by a person desiring to get at the truth; they are to be employed by those whose sole desire is for victory over his opponent, [so that so long as this end is secured, it does not matter whether or not proving or disproving is actually accomplished].

Thus it is that ' the assertion of a conception and its counter-conception' becomes a 'Discussion', when no such improper answers as Casuistry, Futile Rejoinder and Clinchers are employed,—and 'Disputation' or 'Wrangling', when these are employed.

In the Bhāsya on the preceding Sūțra (p. 49, l. 1) conception and counter-conception' have been explained as consisting in the allegation of two contrary characters as subsisting in the same substratum;—and the same applies to the present case also.

"But as a matter of fact, it is not possible for two contrary characters to subsist in the same substratum; for it is absolutely impossible for a single thing to have both characters. If two contrary characters could subsist in the same substratum, it would mean that a single thing can have two (opposite) characters; and as this is an absolute impossibility, it is not right to speak of 'two contrary characters subsisting in the same substratum.'"

<sup>&</sup>quot; The right reading for WHANA is WH. The as read by the Benares Edition.

There is no force in this objection; as it is quite possible for two contrary characters to be alleged as subsisting in the same substratum, when one is real and another merely imaginary; *i. e.* one of the two characters subsists in reality in the thing, while the other has a purely imaginary existence. And in this sense it is quite right to speak of the thing as possessed of two characters. \*

"Well, if two contrary characters can co-exist in a single substratum, we fail to understand how they are 'contrary' to each other  $\dagger$ ."

There is no force in your contention, we reply; as it is quite possible for the two to be regarded as 'contraries' even when they are so related that one merely alters the nature of the other; *i. e.* in this case 'contrariness' would consist merely in the altering of the nature of the other,‡ and not either in the setting aside or destroying of each other [and it would be only in the latter two cases that two 'contraries' could not co-exist in a single substratum].

## Sū[ra (3)

#### Vilunda-Wrangling.

THAT SAME DISPUTATION IS WRANGLING WHEN THEER IS NO ESTABLISHING OF THE COUNTER-CONCEPTION.§ (SC. 3)

#### Bhasya.

### [P. 51, L. 2 to L. 7]

The aforesaid Disputation becomes 'Wrangling'; --with this further qualification that it is without any establishing of the counter-conception. That is to say, out of the above

• will way of the Bib. Ind. edition gives no sense ; the right regding is

+ There is the natural law that of two contraries one must destroy the other; how then can there be co-existence of any two contraries?

1 The w in I. 13, found in the Bib. Ind. edition, is wrong.

§ The 'Sacred Bocks of the Hindus' edition reads the Satra as 'wankaw' This is not supported by any of the available commentaries, nor by the Puri manuscripts nor by the explanations given by the Bhågya, the Värtika and the Tätparya. The last says—'The conception of the critic himself is what is called counter-conception here,—as opposed to the view that he is criticising.' described two allegations in regard to two contrary characters as subsisting in the same substratum,—which have been called above, 'conception and counter-conception '—the Wrangler does not establish one (that which he himself holds), but only goes on to criticise the (proofs adduced for establishing the) conception of the other person.

"In that case the definition of Wrangling had better be stated in the form that it is that Disputation which is without a counter-conception.""

But as a matter of fact, the statement that the Wrangler makes in attacking his opponent's view could constitute his own 'view'; and what is meant (by there being no establishing of the counter-conception) is that he does not proceed to establish the proposition which he lays down as to be proved by himself. And (for this reason) it is better to have the definition as it stands in the Sūțra.<sup>+</sup>

### Varțika on Sū. (3)

[P, 164, L. 16 to P. 165, L. 4]

That same Disputation is Wrangling when §c., §c.—says the S2fra. The term 'when there is no establishing of the counter-conception' means that the Wrangler, who holds the view representing the counter-conception, does not establish any view.

Others have argued as follows—" It is best to define Wrangling as consisting of criticism only; the qualification only indicating that the Wrangler has no view of his own".

• When there is no establishing of the critic's own view, it follows that he has no view of his own to establish; for unless an attempt is made by a person to establish a certain idea, the idea cannot be called a 'pakga', a view.

<sup>†</sup>When the wrangler coufines himself to merely criticising the opponent's view, he does so with the idea that when the opponent's view has been rejected as wrong, it would follow as a necessary consequence that his own view is right; so that he does have *c* view of his own; but it is stated in wrangling, only in the form of the attack on the other view; this 'criticism' being figuratively spoken of as his 'view'.—So that the meaning is that though the wrangler has a view of his own, yet he does not make any attempt at establishing it, apart from the attack that he directs against the other view. Hence it is only right to speak of there being no establishing of his own view; but it would be wrong to say that there is no other view.—Tafpargu.

<sup>‡</sup> This according to the *Talparya*, is only a presentation of the objection as urged in the Bhdgys.

Such a definition would be highly improper,<sup>e</sup> we reply. Because as a matter of fact the critic actually accepts four things; when propounding a criticism, the critic accepts -(1) the presence of the view criticised. (2) the fact that the conception of the other party represents a wrong idea, (3) the presence of the propounder of that other view, and (4) the presence of himself, as the person to whom the other view is propounded ;--- and all this would be impossible if you said that the critic accepts and states the criticism "Even if we mention the criticism only. Var. P. 165. only, all the rest (of the above four) would be naturally implied by it." In that case, (if mere implication were accepted) it would be just as well to define Wrangling as 'Wrangling';---the idea that it attacks the view of the other party being implied by the etymological signification of the name ' Vitunla', 'Wrangling' itself,-which means ' that whereby (a certain view) is wrangled' (vilandyal? vavā).

For these reasons we conclude that it is best to accept the definition as stated in the Sufra.

# ADHYIYA I. Daily Discourse II. Section (2). Of the Fallacious Probans. BHISYA.

# [P. 51, L. 8.]

The '*Hetoabhasas*', 'Fallacious Probans', are so called because they do not possess all the characteristics of the true Probans, and yet they are sufficiently similar to the Probans to appear as such. And these—

> (1) THE SAVYABHICHIEA (INCONCLUSIVE), (2) THE VIEUPPHA (CONTEADIOTOBY), (3) THE PEAKABANASAMA (NEUTBALISED), (4) THE SIPHYA-

# Vārļika on Sūfra (4).

[P. 165, L. 7 to P. 171, L. 14.]

The 'Full cious Probans' are so called lecause they do not possess all the characteristics of the true Probans and yet they are sufficiently similar to the Probans to appear as such—says the Bhāşya; and such Fallacious Probans are the following:— (1) Inconclusive, (2) Contradictory, (3) Neutralised, (4) Unknown, and (5) Mistimed (or Annulled).

"Wherein lies the 'similarity' of what are not true Probans to the true Probans, in virtue of which they appear as Probans?"

The following are the points of similarity :-- (a) Being put forward after the Proposition : Just as the true Probans is put forward after the Proposition, so also is the Fallacious Probans; and this constitutes a 'similarity'. (b) Possessing of anyone of the characteristics of the Probans; i. e. the true Probane that is put forward in proof of the Proposition is endowed with three characteristics [(1)] it is concomitant with the Probandum, (2) it subsists in a substratum where the Probandum is acknowledged to subsist, and (3) it is acknowledged not to subsist where the Probandum is known to be absent]: and if what is put forward happens to possess any one of these three, this constitutes a 'similarity' to the true Probans; or according to the view that the Probans need fulfil only two conditions (the first two of the three mentioned), the 'similarity' may be said to consist in the possessing of any one of the two characteristics of the Probans, + [While their 'similarity' consists in the above] their

† The former similarity is *formal*, and the latter real, says the *Tapparya*; and it proceeds to add that though the true Probans should fulfil *five* conditions—it should not be *annulled* and it should not be *neutralised*, in addition to the three conditions

<sup>•</sup> The name of the fifth is **until** in the Bhaşya edition (Vizianagram Series); and also in the **unuquivary** and the **Tapparya**; it is **unitary** in both editions of the Vartika and in the **unuquivar** 

difference lies in the fact that while one proves, the other does not prove; *i. e.* the true Probans actually proves the Proposition and the Fallacious Probans does not. "To what is this difference due?" It is due to the fact that while the true Probans fulfills all the conditions, the Fallacious Probans fulfills only a few of them.

"What is the purpose of this Satra?"

It has been explained that it serves the purpose of restricting (the actual number of the Fallacious Probans) by means of the classification put forward. "What is it that has to be restricted by the classification?" As a matter of fact, the extent of the Probans, right and wrong, is vast, appearing in numerous ways; and it is necessary to curtail or restrict this vast extent. "In what numerous diverse ways do the Probans, right and wrong, appear?" Well, as a matter of fact, if we take into consideration the diversities of time, of person, and of the thing to be proved, their number cannot be counted; but in a general way, if we take into consideration only the diversity due to the relation of the Probans to the Probandum, the number of Probans, right and wrong. on being computed, comes to be 176. E. q, the diversity in a character concomitant with the Probandum is sizteen. fold; so also is the diversity of that character which subsists in only a part of the Probandum; and so also that of the character which does not subsist in the Probandum : and in both of these cases the Probans may be Var. P. 166. put forward in a qualified form, which will admit of a further twofold diversity due to the fact of either the qualifying factor or the qualified factor being unknown: and this would afford 64 diversities: the further diversity caused by the fact of the qualifying factor

mentioned in the text,—yet the Author has mentioned only three; it being immaterial how many are mentioned, as all that the Author means to point out here is that the Fallacious Probans should fulfil some, not all, conditions of the true Probans.

or the qualified factor being inapt<sup>®</sup>, yields another 64 [and these 64 and 64, along with the former three, 16, 16 and 16, make up 176].

Out of these, we are going to cite examples of those sixteen kinds of Probans (right and wrong) that are concomitant with the Probandum $\dagger$ :--(1) That which is concomitant with the Probandum, and also with things homologous to it (*i. e.* in which the predicated character is known to subsist) and with things not similar to it-*i.e.* with the *Reverse*, (that wherein the predicated character is known not to subsist); *e. g.* 'sound is eternal (or non-eternal), because it is *knowable* (where *knowability* subsists in sound, in all *eternal* things and also in all *non-eternal* things); [this is too wide];--(2) that which is concomitant with the Probandum and the Homologue (that which is similar to the Probandum in possessing the predicated character), and which subsists in a part of the Reverse (that wherein the predicated character is known to be absent) $\ddagger$ ; *e. g.* ' this is a cow, because *it has horng*' (where

• Both editions read unutual &c. But the correct reading apparently should be only ward. This is clear from P. 169, l. 13 below.

+ It is necessary to bear in mind the fact that a nong older writers, the terms 'paksa' and 'sadhya' are used promiscuously. Later writers use the term 'paksa' for the subject of the Proposition, and 'sidhya' for the predicate of the Proposition . i. e. that which is asserted of the subject. But no such restriction of usage is found among older writers. For instance, in the present context, 'ss ihya' is the same as 'pakea'; as is clear from the text of l. 2, on next page. In fact the term 'sādāya' is used in its literal sense of what is to be proved; and the confusion in usage is due to the diversity of opinion as to the exact nature of what is actually proved by the Inference. This has been discussed in detail by the Vartika on Su. 1-1-5 (Translation, pp. 172-174.) Bearing this in mind, the next sentence exemplifying the (1) of the 16, may be rendered according to modern usage as-'that which subsists in (is concomitant with) the Subject, and also in things where the predicated character is known to subsist, and also where the predicated character is known not to subsist ';--and so throughout in the present constext ; but we prefer to use the term ' probandum ', as it means what is to be proved, and as such is an exact equivalent to the original term 'sādhya', so that it lends itself to the same uses as the original term.

<sup>‡</sup> With a view to guard against having to insert the parenthetical explanation at each step, it may be stated here that the term 'Homologue' will, in the present context, stand for what the text calls 'sajäfiya', by which is meant the 'sapakya' of the

it is found that horns are present in the animal present, and is present in all cows and also in some non-cows); [this is too wide];-(3) that which is concomitant with the Probandum and the Homologue, and does not subsist in the Reverse: is non-eternal, because it is a product' c. q. Sound where the character of product subsists in sound, and in its homologues, the non-eternal jar etc.; and it does not subsist in the elernal Soul): [this is valid];--(4) that which is concomitant with the Probandum. does not subsist in the Homologue and is concomitant with the Reverse; e. q., 'sound is eternal, because it is a product' (where the character of product subsists in sound, but in no other eternal thing, and it is found in all non-eternal things); [this is contradictory];--(5) that which is concomitant with the Probandum. which does not subsist in the Homologue, and which subsists in a part of the Reverse; e. q. 'sound is eternal, because while being possessed of generality and individuality it is perceptible by our external sense-organ' (where the character stated is found to be present in sound, it is not present in any eternal thing, and it subsists in some non-eternal things); [this is contradictory];--(6) that which is concomitant with the Probandum, and does not subsist in either the Homologue or the Reverse; e. g., 'sound is eternal, because while possessed of generality and individuality, it is perceptible by the auditory organ, like the jar' (where the character mentioned is one that subsists in sound, but not in any other thing, eternal or noneternal; [this is too specific];-(7) that which is concomitant with the Probandum, subsists in a part of the Homologue and is concomitant with the Reverse also; ---e. g. 'this is a non-cow, because it has horns' (horns are found in non-cows and in cows also); [this is too wide];--(8) that which is concomitant with the Probandum, subsists in the Homologue and in a part of the Reverse; -e. g. 'Sound is eternal because it

later writers, that in which the predicated character is admitted by both parties to subsist; and the term ' Reverse' will stand for '*vipakşa*', that in which the predicated character is admitted by both parties to be non-subsistent.

is inlangible' (intangibility subsisting in all eternal things and also in some non-eternal things); [this is too wide];-(9) that which is concomitant with the Probandum, subsists in a part of the Homologue, and also in a part of the Reverse ; e. g. 'Sound is non-eternal, because having generality and individuality, it is perceptible to us by our external sense-organs'; here the qualifying term ' having generality and individuality ' is added with a view to exclude Generality (which has no generality), Inherence (which also has no generality) and Individuality (which has no further individuality); the term 'perceptible to us' serves to exclude atoms; and 'perceptible by external organs' excludes the Soul; [this reasoning is valid];--(10) that which is concomitant with the Probandum and the Homologue, and in whose case there is no Reverse; e. g. when a person states the following reasoning entirely on the basis of his own doctrine-'Sound is non-eternal. because it is a product' [which is valid if the man holds that sound is actually produced; and yet the reasoning to the contrary also would be valid- ' Sound is eternal because it is not a product'-when put forward by the man on the basis of his own doctrine that Sound is never produced, it is only manifested]; [this is oulid];-(11) that which is concomitant with the Probandum, in whose case there is no Homologue, and which subsists in a part of the Reverse; e. g. 'Sound is eternal, because it is perceptible by externul sense-organs'; [this is contradictory];-(15) that which is concomitant with the Probandum, in whose Var. P. 167.

case there is no Homologue, and which does not subsist in the Reverse; e. g. 'the living body is not without soul, as (if it were) it would not be the receptacle of the sense-organs'; [this is *valid*];--(16) that which is concomitant with the Probandum, and in whose case there is neither Homologue nor Reverse; e. g. 'all things are eternal because they are knowable'; [this is too specific]. These are the sixteen kinds of Probans concomitant with the Probandum; out of these, five (3, 9, 10, 11 and 15) are true Probans. and the rest are only apparent (fallacious) Probans. Of the former five, two, the *third* and the *ninth*, are affirmativenegative, not subsisting in the Reverse at all; the *tenth* and *eleventh*, as propounded by a person entirely on the basis of his own doctrines, are universal-affirmative; and the fifteenth is negative.

The following are the sixteen kinds of Probans subsisting in a part of the Probandum (the second group of sixteen, mentioned in the Text at the bottom of p. 165):-(1) that which subsists in a part of the Probandum, and is concomitant with the Homologue and the Reverse; e. g. ' Earth, Water, Fire and Akāsha are nou-eternal, because they are inodorous':--(2) that which subsists in a part of the Probandum, is concomitant with the Homologue and subsists in a part of the Reverse; e. g. 'speech and mind have generality and individuality and are perceptible by our external sense-organs, because they are non-eternal';--(3) that which subsists in a part of the Probandum, is concomitant with the Homologue and does not subsist in the Reverse; e. g. 'speech and mind are non-eternal because they are products';--(4) that which subsists in a part of the Probandum, does not subsist in the Homologue and is concomitant with the Reverse; e. g. 'speech and mind are eternal, because they are products '•;---(5) that which subsists in a part of the Probandum, does not subsist in the Homologue and subsists in a part of Reverse; e. a. 'speech and mind are possessed of generality and individuality and are perceptible by our external sense-organs, because they are elernal';-(6) that which subsists in a part of the Probandum, and does not subsist in either the Homologue or the Reverse; e. g. 'Sound is non-eternal because it has for its non-constituent cause a disjunction born of disjunction';--(7) that which subsists in part of the Probandum and

<sup>•</sup> This subsists in a part of the Probandum, as *Dhvamez* is an eternal thing and is a product. The reading **unit** is wrong; as the reasoning with this word would be perfectly valid.

in a part of the Homologue, and is concomitant with the Reverse ; c. q. 'atoms are non-eternal because they are inodorous';-(8) that which subsists in a part of the Probandum, in a part of the Homologue and in a part of the Reverse; e. g. 'speech and mind are non-eternal, because they are incorporeal';--(?) that which subsists in a part of the Probandum and in a part of the Homologue, and does not subsist in the Reverse; e. g. 'speech and mind are non-eternal, because possessed of generality and individuality they are perceptible by our external sense-organs '•;-(10) that which subsists in a part of the Probandum, is concomitant with the Homologue, and in whose case there is no Reverse; e. g. 'Colour and Cognition are non-sternal, because they are incorporeal, like sensation'; when this reasoning would be put forward on the basis of a definite (Bauddha) doctrine [according to which the skandhus of Sensation, Name and Impression, which are different from the skandhas of Colour and Cognition, are non-eternal, and as such constitute the Homologue with which the 'incorporeality ' is concomitant]; +--(11) that which subsists in a part of the Probandum, and in whose case there is no Homologue 1; e. g. 'the eye and cognition are noneternal, because they are incorporeal, like Colour &c.':-(12) that which subsists in a part of the Probandum. Var : P. 168. which does not subsist in the Homologue, and in whose case there is no Reverse; e. g. 'sound and mind are non-eternal, because they are audible';-(13) that which

are non-eternal, because they are audicle; -(13) that which subsists in a part of the Probandum §, in whose case there is no Homologue and which is concomitant with the Reverse;

• The Benares Edition reads बाबाव्यकी for बाब.चवी; neither is satisfactory ; the former gives better sense ; but the syntax is not clear.

+ The words enclosed within brackets in the Benarcs Edition are not wanted.

‡ वाज्यसूचातीयेक्सेच of the Bib. Ind. edition is wrong reading. The correct reading is supplied by the Benares edition---वायोकसेच.

§ In several places in this para. the Bonares edition reads and alter but the original reading at the very outset is undatagin; and ex-hypothesi every one of these sixteen is undataging.

e. g. 'sound and mind are eternal<sup>\*</sup>, because they are products';—(14) that which subsists in a part of the Probandum, in whose case there is no Homologue and which subsists in a part of the Reverse; e. g. 'the eye and cognition are eternal, because they are corporeal';—(15) that which subsists in a part of the Probandum, in whose case there is no Homologue, and which does not subsist in the Reverse; e. g. 'the body† is not without Soul, because (if it were) it would not be the receptacle of the sense-organs';—(16) that which subsists in a part of the Probandum, and in whose case there is neither Homologue nor Reverse;—e.g. 'All things are non-eternal because they are incorporeal.' All these sixteen kinds of Probans, subsisting as they do in only a part of the Probandum, are all fallacious.

The following are the sixteen kinds of Probans not subsisting in the Probandum (the third group of sixteen mentioned in the *Tcat*, bottom of p. 165) :--(1) that which does not subsist in the Probandum, and which is concomitant with the Homologue and the Reverse ; e.g., 'the Earth is non eternal, because it is inodorous';--(2) that which does not subsist in the Probandum, which is concomitant with the Homologue and subsists in a part of the Reverse ; e.g. 'Sound is non-eternal, because it is not auditle'; -(3) that which does not subsist in the Probandum, is concomitant with the Homologue and does not subsist in the Reverse ; e.g. 'Sound is a thing (i. e. a Substance, a Quality or an Action), because it is inaudible and is possessed of a generality ';§--(4) that which

• The reading would make the reasoning quite valid, which it is not.

† The reasoning with the term 'wdite' 'body' is invalid ; if it were 'uitwuitt', living body', it would make it valid.

‡ विषयावृत्ति: and विषयद्ति, both readings will suit here ; but the Jalparya favours विषयावृत्ति :

§ If mere 'inaudibility' were put forward, that would apply to Generality etc. also, which are not 'arfla'; so that the Probans, in that case, will not be **www.will** is added; which excludes Generality and the rest, which have no generality at all.—*Talparya*. 'The name arfla applies to Substance, Quality and Action'—says the Vaishēgika Sūtra 8:2-3.

does not subsist in the Probandum or in the Homologue, and which is concomitant with the Reverse; e. g. ' Sound is a thing, because it has no generality ';--(5) that which does not subsist either in the Probandum or in the Homologue, and which subsists in the Reverse;  $\bullet \cdot \cdot \cdot \cdot g_{\bullet}$  : Sound has a cause, because it is not a thing ':--(6) that which subsists neither in the Probandum, nor in the Homologue, nor in the Reverse ; e. g. 'Sound is eternal, because it is a nonentity';--(7) that which does not subsist in the Probandum, which subsists in a part of the Homologue and which is concomitant with the Reverse; e. q. 'Sound is intangible, because it is a substance';-(8) that which does not subsist in the Probandum and which subsists in a part of the Homologue and also in a part of the Reverse; e. g. 'Sound has a cause because it is corporeal';--(9) that which does not subsist in the Probandum, which subsists in a part of the Homologue and which does not subsist in the Reverse; e. g. 'Sound has a receptacle because it is visible'; this reasoning fulfulling the said conditions according to the doctrine of the Vaishesikast;-(10) that which does not subsist in the Probandum, which is concomitant with the Homologue and in whose case there is no Reverse; e. g. Sound is non-eternal because it is not audible'; this reasoning being urged on the basis of a particular doctrine (of the Sautrantikas, for whom nothing is eternal, whence no 'Reverse' in the said reasoning would be possible);-(11) that which does not subsist in the Probandum, which subsists in a part of the Homelogue, and in whose case there is no Reverse : e. g. Sound is non-eternal, because it is corporeal ';-(12) that which does not subsist in the Probaudum or in the Homologue, and in whose case there is no Reverse; e. g. 'Sound is noneternal, because it is a non-entity ';--(13) that which does not

• furugfu is the correct reading ; fururgfu would make this identical with (6).

† Tuis has been added with a view to meet the objection that Inherence is visible and yet without a receptacle, and so visibility is not non-subsistent in the Reverse. According to the Vaishëşikas however Inherence is not visible, being beyond the. reach of the Senses, and knowable only by Inference (see Prashastapala, P. 329). subsist in the Probandum, in whose case there is no Homologue, and which is concomitant with the

Reverse; e. g. 'Sound is eternal because it is inaudible';—(14) that which not does subsist in the Probandum, in whose case there is no Homologue and which subsists in a part of the Reverse; 'Sound is eternal because it is incorporeal'; (15) that which does not subsist in the Probandum, in whose case there is no Homologue, and which does not subsist in the Reverse; e. g. 'Sound is eternal because is is a nonentity';—(16) that which does not subsist in the Probandum, and in whose case there is neither Homologue nor Reverse; e. g. 'All things are non-eternal because they are non-entities.' All these sixteen, not subsisting in the Probandum, are Fallacious Probans.

"It has been said above (p. 166, l. 1), that the two groups of sixteen will afford 64 varieties,† through the diversity caused by either the qualifying factor or the qualified factor being unknown [when the Probans is stated in a qualified form];--now how does this come about ?" This comes about from the fact of both the concomitant and the non-concomitant Probans being stated in a qualified form; that is to say, the sixteen that are concomitant with the Probandum (the first group of 16 described above) and also those that subsist in part of the Probandum (the second group of 16 described above),-these 32 become 6 when we take into consideration the diversity caused by the fact of either the qualifying factor or the qualified factor being unknown. Of these we shall give examples of the concomitant Probans first-(1) 'Sound is non-eternal, because being undenotable it is knowable'; where the qualifying factor (Leing undenotable) is unknown (sound being known to be something

<sup>+</sup> The Bib. Ind. reading is corrupt. The correct reading is supplied by the Benares edition ' ME: WIE' for ' WW: WIEW'.

quite denotable by words);—(2) 'Sound is non-eternal because being knowable, it is undenotable,'; where being undenotable is the qualified factor and is unknown. We can find similar varieties in regard to every one of the 16 Probans concomitant with the Probandum; and the same examples will serve in both cases (by reversing the qualified and qualifying factors, as just shown). As examples of similar varieties of the Probans that subsists in a part of the Probandum, we have the following:—(1)' Earth, Water, Fire, and Ākāsha are non-eternal, because being undenotable they are inodorous', where the qualifying factor (being undenotable) is unknown;—(2) 'the same, Earth etc., are non-eternal, because being inodorous they are undenotable', where ' undenotability' is the qualified factor and is unknown. Similarly with all other Probans subsisting in a part of the Probandum.

Similarly we may trace the 64 varieties due to the diversity caused by the fact of the qualified or the qualifying factor being inapt *E. g.*, 'Sound is non-eternal, because being a product it is knowable' [where the qualified factor, knowability, is inapt, being absolutely incapable of proving what it is put forward to prove], and 'Sound is non-eternal, because being knowable it is a product' [where knowability is the qualifying factor, and is inapt]. Similarly with every one of the examples.

Similar 64 varieties would be available, due to the diversity caused by the qualifying or the qualified factor being doubtful; e.g. 'this is the peacock's sound, because while containing the sadja and the other notes of the musical scale, it does not consist of distinct letter-sounds,' [where the qualifying factor, the presence of the other notes besides sadja, is doubtful, the peacock's voice being held to consist almost entirely of the 'sadja' note alone]; and ' this is the peacock's sound, because while not consisting of distinct letter-sounds, it contains the sadja and other notes of the musical scale' [where the presence of the other notes is the qualified factor, which is doubtful].

The (8 times 64, 192) instances enumerated above are those in which both parties admit of the unknown and doubtful characters of the qualifying and qualified factors entering into the nature of the Probans subsisting in the Probandum. Those instances again where only one or the other of the two parties admits of the unknown character, will be 128, made up of those that are concomitant with the Probandum and those that are not concomitant with it (subsisting in only a part of it)\*. The same 64 varieties again become 192 (3 times 64) through the diversity caused by-(1) the fact of the qualified and qualifying factors being not co-existent, (2) the fact of the qualified and qualifying factors being doubtful, and (3) the fact of the qualifying and qualified factors being inapt. Again there are 123 varieties caused by the diversity due to the gualified and the qualifying factors having unknown substrata, -- unknown. to one or to both parties. These again, as before, lead on to another group of 192<sup>†</sup>. For example-'This place is fiery because it is smoky' [where the qualified factor, the place, is held by both parties to be not the substratum of fieriness1; and 'the Soul exists because it has the qualities of Desire and

Var : P. 170.

for instance.]

the rest' [where the Soul, as the substratum of existence or of the qualities, is not accepted by one of the parties, the Bauddha or the Vedāntin,

Following is an instance where the qualifying factor is inapt, not-concomitant and unknown :-- ' Sound is non-eternal, because while following after effort it is a product' [where the qualified factor, being a product, is itself apt to prove noneternality, and the qualification 'following after effort' is

# grives any would be 132; but as the number will be only twice 64, the Idiparya rightly interprets it as 128, expounding the compound Eritist as 'thirty less than 2'.

वरीगवाण्यतरपदामनिहवा हातिंदव' वहन हे पुन: प्रवर्षदेव हागवतं कहन

It having been shown above (Text, P. 52) that what is proved by the Inference is not the place as being flery,-but the Fiery Place.

entirely superfluous, and hence inapt]. The following is an instance where the qualified factor is not-concomitant, and inapt :--- 'Sound is non-eternal, because while differing with the difference in its cause, it is apprehended.'

The following is an instance where the qualified factor is not co-existent :-- ' Primordial Matter exists, because there is uniformity among its diverse modifications '<sup>‡</sup>. The following is an instance where the qualifying factor is not co-existent---'The words colour, taste, odour, touch and sound have denotations entirely different from that of the word sandal, because, while not bearing (to the sandal.) the relation of compound and component, they are referred to by means of that word'. § The same reason when stated inversely affords the instance of the non-existent qualified factor.

An instance where the Probans put forward is actually known to be otherwise, we have in the following argument as put forward by others (the Mimānsakas)—'Word is eternal, because it is repeated (by several persons).' [Where, as a matter of fact it is known that repetition proves, not only eternality, but non-eternality also, as will be shown below, in Adhyāya II]. The following again is an instance

• The same reasoning, when stated in the form 'because while being a product, it follows after effort', would also be an instance of the qualified factor being inapt etc., etc.

+ 'Being apprehended' is the qualified factor; and as it belongs to eternal things also, it is *inopt*, unable to prove *non-sternality*, which is proved by the other character, of 'differing with difference in the cause'.

<sup>‡</sup> What is meant by this reasoning is that every modification of matter—in the shape of the several things of the world—shows this uniform character that it is of the nature of pleasure, pain and stupefaction. The fallacy of this lies in the fact that the 'uniformity' found in the modifications is put forward to prove the existence of Primordial Matter; so that the Probans is in a substratum other than that of the Probandum.—*Tátparya*.

§ We have the assertion 'colour &c. of the sandal', which shows that the things, colour &c., belong to the sandal and are not its component parts. So that the absence of this relation subsists in the *things*, colour &c.; while what are referred to by means of the word 'sandal' are the words 'colour' &c.

I i. c. when stated in the form-'because while they are referred to by means of the word sandsi, they do not bear the relation of compound and component.'

Up to this, we have had 882 varieties.

Downloaded from https://www.holybooks.com

where the qualifying factor is doubtful and unknown—' This place is fiery, because while being smoky it gives light', this reasoning being urged while the presence of smoke is merely suspected.\* When the same reasoning is put forward in the inverse form ('because while giving light it is smoky') we have an instance of the doubtful qualified factor.

Thus then we find that the doubtful, the unknown, and the non-concomitant, (which have been shown to be 32 in number) become sixty-four, through the diversity caused by its being unknown to both or one of the two parties. † And these, by the computation indicated above, make up the number 384. The same number we have in connection with those Probans that are known to be otherwise. The same computation applies to those in whom the qualifying factor is contradictory, and also to those in whom the qualified factor is contradictory. And examples of these are to be found under the Varfika dealing with the individual Fallacious Probans (on the next five Sūţrās), and may also be observed by the student himself.

Thus then, by the several computations detailed above, the number of Probans, right and wrong, through due distinction being drawn between the diversities attending the qualifying and qualified factors, comes to be 2032. And if we take into consideration the diversities due to being unknown and other defects of the Probans, the variety becomes innumerable. As for the Probans not subsisting in the Probandum, inusmuch as they are absolutely non-existent (in the Probandum) they could not be qualified by any qualifications; and as such they are not mentioned under the defects attending the qualified and qualifying factors.

<sup>•</sup> The Jaiparys reads Muilduid for Muilduid which is found in both editions. The translation follows the reading of the Jaiparys.

Thus have been described in full detail those Probans that are concomitant and non-concomitant with the actually var: P. 171. existing Probandum. Of these the sixteen principal varieties of the 'unknown' Probans are such as do not subsist in the Probandum. The Inconclusive Probans have only six main varieties; among those concomitant with the Probandum, the number of the Contradictory Probans is only four; and the last of them, subsisting in every possible Probandum, is too universal. The other Fallacious Probans, which are Unknown, Inconclusive and Contradictory, are, each of them, diversified through being non-concomitant and unknown; • and the examples of these are to be found among those we have already cited.

Some people assert that the Inconclusive Probans is the same as that which is not unconcomitant with the contradictory. But this is not right; simply because it is an impossibility; we have already explained that 'avyabhichāra'; absence of non-concomitance, is not possible in reference to two contradictory things (i. e. nothing can be concomitant with two contradictories). If however we do admit of such concomitance, then the number of varieties of such a Probans becomes 25; there are five Probans; and each of these being opposed (or contradicted) by similar and dissimilar Probans, give rise to five pentads. Examples of every one of these twenty-five varieties are not possible; hence they are not illustrated.

<sup>+</sup> The 'five pentade' are thus explained in the *Taiparya* :---There are two kinds of the universal affirmative Probans, that which is concomitant with the Homologue and that which is not so concomitant; the negative Probans is only one; and the positive-negative Probans is of two kinds, that which is concomitant with the Homologue and that which is not concomitant with it. These five are opposed by similar and disvimilar Probans; *i.e.*, the universal affirmative Probans is contradicted by another universal affirmative Probans; as also by the other four kinds; similarly

<sup>•</sup> The Benares edition reads **a**Slagradifertion would mean—'the other Fallacious Probans, which are Inconclusive, become, diversified through being non-concomitant contradictory and well-known-non-concomitant'. The former reading is decidedly better.

Such are the Fallacious Probans. whose varieties have been briefly described as above; and with a view to include all these varieties, the Author has put forward the Sūtra, which sets out the divisions of the Fallacious Probans. "We find that the fact that the number of Fallacious probans is five is implied by the definitions provided (in the next five Sutras); i.e. that the number of Fallacious Probans is five is clearly indicated by the five Sūtras that propound the definitions of the five Fallacious probans; so that the present Sutra, if it were simply meant to restrict the number to five, would be entirely superfluous." It is certainly not superfluous; as all that the definition does is to differentiate (a thing from like and unlike things); that is, all that the definitions (provided in the next five Sūtrus) do is to differentiate the Fallacious Probans from one another; and they do not restrict the number to five; the definitions do not indicate that the number of Fallacious Probans is five only.

#### SUTBA (5).

The Inconclusive Probans (1).

Bhāşya.

[P. 51, L. 11 to P. 52, L. 5]. From among the aforesaid five Fallacious Probans-"THE INCONCLUSIVE" IS THAT WHICH IS TAINTED BY INDECISION .'-Sū. 5.

The term 'vyabhichāra', 'indecision', means non-fixity on any one point; and that which is accompanied by this 'indecision' is the 'indecisive'. As for example, in the reasoning

with each of the other four kinds ; so that with each of the five there are five contradictories ; thus giving the number 25, which is the number of those that are concomitant with contradictories.

•The term, what was is explained by the **many factor** as follows-'taxa', arate areaminet ar 'ard' after and after a says the Bhays below (P. 52, 1. 4). On this So, the *fatparys* remarks that the terms 'inconclusive' and 'indecisive' boing synonymous-which is the term defined and which the defining term should vary with the student. If he knows the meaning of 'inconclusive' and not that of 'indecisive' then the latter shall be for him the defined term, and the former the defining term, and so vice versa.

*†1. E.*, When a Probans is found to be concomitant with neither the probandum only, nor the negation of the probandum only,—but with both—then it is said to be 'tainted by syubhichara or indecision'.

Sound is eternal, because it is intaugible,-the jar which is tangible has been found to be non-eternal.--and Sound is not tangible,-therefore, being intangible, Sound must be eternal'. -we find that the character of intangibility has been put forward as proving the character of non-eternulity; while as a matter of fact the two characters do not bear to each other the relation of proof and proved (Probans and Probandum); fas all non-eternal things are not tangible, e.g. Buddhi is non-eternal and yet it is intangible]; for we find that the Atom is tangible and yet eternal\*. If the Soul and such other things (which combine elernality with intangibility) be cited as the instance (supporting the reasoning), then, -- inasmuch as the Probans has been defined (above, in Sū. 1-1-34) as that which establishes the Probandum through similarity to the instance',--' intangiblity ' will have to be regarded as the Probans; and this would be found to be not necessarily concomitant with eternality, -e. g. in the case of Bud Ihi, which is intangible and yet non-eternal. So that in both kinds of instance [in that of dissimilarity, in the case of jur cited before, which is tangible and non-eternal, --- and in that of similarity, as in the case of Soul, which is intangible and eternal], there is 'indecision', non-concomitance, (between intaugibility and non-et-runlity); and thus they cannot be accepted to be related as probans and probandum; and thus, not fulfilling the conditions of the Probaus, what is cited in the above reasoning cannot be a true Probans.

IIf the term 'अनैफान्तिक:' be taken as embodying the definition. and 'सब्यभियार:' as the term defined, in that case the word ग्रमैकान्तिक ;, should be explained as follows :]-Iu the reasoning cited, eternality is one anta', point, and 'non-eternality' is another one 'anta', point; that which subsists in-is concomitant with-one point would be 'ekanta', one-pointed; and the contrary (that is not concomitant, with one) would be 'anaikania', not one-pointed; as this would be concomitant with both (the Probandum, eternality, and its contrary, non-eternality).†

### Varlika on Sutra 5.

[P. 17], L. 16 to P. 173, L. 16].

From among the aforesaid five Fallacious Probans, the Inconclusive is that which is indecisive-says the Bhasya. The

540

<sup>•</sup> So that we cannot deduce *intengibility* from *etsmality*. † In this case the definition of this Fallacious Probans will be ' that which is positively or negatively concomitant with (i. e. whose presence or absence is concomifant with) both, the probandum as well as the reverse'; and this will be a true definition, as serving to exclude all the other Fallacious Probans, the Contradictory etc.

term 'Ekania' means that which is fixed on one point (Ekasmin ant Eniyatah').

"What is indecisiveness ?"

Indecisiveness consists in the Probans subsisting in the Probandum, in the Homologue and also elsewhere; hence that Probans is called 'indecisive' which, while subsisting in the Probandum and its Homologue, subsists in other things also; and such subsisting constitutes 'indecision' (or non-concomitance, with the Probandum). In connection with every individual thing, except Knowability (which belongs to all things), there are two aspects (positive and negative); e. g. 'eternality'--'non-eternality', 'pervading'---' non-pervading', and so on; and if it is found that what is put forward as the Probans applies to both these aspects, it is called 'Inconclusive.'

"The term 'inconclusive' being a negative term (not-

conclusive), does the negative particle con-

- [The Bauddha urges the following objection]:-

Var : P. 172.

note Paryudāsa, exclusion (so that 'not-conclusive', denoting exclusion of something, which implies the inclusion of others, stands for that something positive. which is other than conclusive)? or morely prasajyapratisedha, preclusion (so that 'non-conclusive,' denoting mere preclusion which does not imply inclusion, stands for a simple negation or non-existence, the absence of the conclusive) ?\* "What does this mean?' It means that if exclusion is meant, then every Fallacious Probans can be called 'Inconclusive': If 'Inconclusive' stands for what is non-conclusive, then every kind of Fallacious Probans becomes included in the term; [as it is only the true Probans that is 'conclusive', every Fallacious Probans would be not-conclusive]; and this would mean that there is only one kind of Fallacious Probans (the Inconclusive). If, on the, other hand, the negative particle means simple preclusion or non-existence, the term 'inconclusive' would mean the nonexistence of the conclusive; and certainly this non-existence

<sup>•</sup> As a rule, in negative compounds the former connotation is accepted.

could not stand for indecision or non-concomitance [as concomitance and non-concomitance are properties belonging to positive things; and they can never subsist in m re non-existence, which, by its very nature, is something with egard to which nothing can be predicated]; so that in this case it would be wrong to call any Fallacious Probans 'inconclusive.'"<sup>+</sup>

Our answer to the above is that we do not admit the view that the negative particle (in 'Inconclusive') connotes eaclusion; we hold that it connotes Preclusion. "But Preclusion (implying only non-existence of certain things) would be mere negation (with regard to which nothing could be predicated)." Non-existence is not mere negation; as it serves to qualify a positive character; the term ' inconclusive' means that character which is possessed of this qualification that it does not subsist in only one aspect of a thing; where the non-subsisting appears as a definite qualification of the character; and as such it cannot be regarded as a mere negation; as a matter of fact, no relation of qualification and qualified can belong to a more negation; no more negation could ever be spoken of as 'subsisting in one aspect of a thing ' or ' not subsisting in one aspect of the thing.' "Why so?" Because we find this true in the case of the negative compound 'Non-Brahmana'; in this compound word 'nonbrahmana' we find that the negative particle connoting preclusion, serves to preclude what follows in the next term ('brāhmaņa'); and certainly it does not signify mere negation; and exactly similar is the case with the term under consideration ('Inconclusive', which also is negative compound.;

<sup>†</sup> For a discussion as to the signification of the negative particle, our reader is referred to the writer's Prabhakara Mimagea, P. 237.

<sup>&</sup>lt;sup>†</sup> In connection with this discussion the *Tatparya* makes the following observation:—The orthodox Naiyāyika view is that the negative particle in a negative compound always connotes exclusion; and this also is the most reasonable view. But the answer given by the author of the Vārtika to the Bauddha objection is put forward in the other way, because the Bauddha himself is very fond of preclusion, and employs this to oriticise everything; so that our author, in order to make his answer all the more effective, offers it on the basis of the Bauddha's own view. So

The example of the 'Inconclusive' Probans (cited in the Bhaeya) is- Sound is eternal, because it is tangible.' [When Sound is called 'asparshavan', the possessive affix in this term is explained as 'shabdasya asparshalvam, 'where] the Genitive ending (in ' shabd isya') indicates a difference between 'Sound' and 'intangibility'). Now what is this ('intangibility' as different from 'Sound')? The 'intangibility' (of Sound) may mean either that it enjoys its own existence while not being the receptacle of tangibility, or that it is related to existence while not being the receptacle of tangibility; - in both cases it would be something different from the Sound itself; so that the Genitive ending would be fully significant. "How can this be? [How can the meaning of 'intangibility' be as ex plained ?)" It must be accepted to have the said meaning, on the ground that the term 'intangible' is used when the said idea is present, and it is not used when it is not present; that is to say, when a certain thing enjoys its existence while being tangible, the term 'intangible' is not used with regard to it,--nor is it used in connection with what is an absolute non-entity; it is used however in connection with a thing which enjoys its existence while being inlangible. And further, we can learn the exact meaning of the term 'intangible' by following the exact signification of the sentence that expresses the same idea; and we find that the word 'intangible' means exactly what is meant by the sentence 'the thing is related to existence while not being the receptacle of tangibility'. [So that it is clear that we may take the term 'intangibility' in either of the two senses mentioned above |.

[The Bhāeya, p. 52, l. 4, has indicated the possibility of the Sūtra being interpreted in such a manner as to make

that what our text means is that 'even admitting your view that the negative compound connotes *preclusion*, we hold that what is precluded is not a mere insignificant non-entity, but a positive entity qualified by the non-existence of another positive entity'.

Such a definition would not be at all improper, we reply; Var: P. 173. as what is meant by the term 'inconclusive' is known from ordinary usage; there is need for an explanation, in a scientific treatise, of only such things as are not known from ordinary usage; it would be absolutely futile to provide explanations of things that can be known from ordinary experience; and we know it from ordinary experience that the word 'inconclusive' signifies that which subsists in both aspects of a thing. If you think that it is improper to make use of terms that have not been explained in the treatise itself, then it would become necessary to provide adequate explanations of such ordinary words as 'pain' and the like! The conclusion thus is that the view expressed by the Bhāşya is quite reasonable.

"Such a definition as has been propounded in the Sütra would not be a correct definition, as it would not be comprehensive."

What you mean is that the definition of the Inconclusive Probans provided by the *Sulra* does not include all kinds of Inconclusive Probans,—such for instance as the *Too Specific* Probans [which, as subsisting in neither of the two aspects of the Probandum, could not be said to subsist in

Downloaded from https://www.holybooks.com

both aspects]\*. But what you say is not right; as the *Too Specific* Probans is actually included in the definition. "How?" [When we speak of subsisting in both aspects, we mean subsisting either positively or negatively; *i. e.* what is meant is that when it is found that the Probans put forward is such as can either be affirmed or denied in reference to both aspects, *i. e.* to the Probandum as well as its Reverse, it is called 'inconclusive'; and certainly] the Too Specific Probans also, when taken negatively, is actually found to be such as has its negation common to both aspects; and thus is capable of being called 'Inconclusive'.

Some philosophers have included the 'Neutralised' Probans under the 'Inconclusive'. They argue thus-"An example of the Neutralised Probans we have in the reasoningis non-eternal, because it is something · The Soul different from the Body'; and here we find that Difference from the Body is something that subsists in eternal as well as non-eternal things (e. g. in the Atom and in Baddhi); and thus it fulfills the conditions of the 'Inconclusive' These philosophers have failed to grasp the Probans." exact signification of diversity of definitions and diversity of examples; when we assert that 'the Inconclusive is that which is indecisive', we provide a definition of the Inconclusive or nou-concomitant Probans; and if the characteristics mentioned in this definition were found in the 'Neutralised Probans', then alone could the definition be said to be too wide, (as including a Fallacious Probans other than the Inconclusive); but the fact that a certain example of the Inconclusive Probans is found to fulfil the conditions of some other kind of Fallacious Probans. does not

<sup>•</sup> An example of the Too Specific Probans we have in the reasoning -'the Earth is eternal, because it is odorous;' here it is found that 'odorousness' would fulfil the conditions of the definition if it subsisted in *both* eternal and non-eternal things; as a matter of fact it subsists in neither; as belonging to *Earth* alone, it subsists in no other eternal or non-eternal things.

constitute a defect in the definition of the 'Inconclusive' Probans; as the only circumstances that make a definition defective are—the non-inclusion of what is meant to be defined and the inclusion of what is not meant to be defined; and certainly neither of these defects is shown (by the fact of a certain concrete example fulfilling the conditions of more than one definition)\*. In this connection it would be well if you looked into the definition of the 'Neutralised' Probans, which follows later on.

## Sutra (6).

The Contradictory Probans (2).

A CERTAIN DOCTRINE (OR VIRW) HAVING BEEN ACCEPTED, THE PROBANS THAT IS CONTRADICTORY TO IT IS CALLED THE 'CONTRADICTORY.'-(SU. 6).

### Вназча.

[P. 52, L. 7 to L. 16.]

The term ' ladcirodhi', ' contradictory to it', means that which contradicts it, i. e. that which contradicts (sets aside, renders impossible †) the doctrine that has been accepted. E.g. | When the author of the Yogabhāşya on Yogasūtra III-13 1 makes the two statements]-- 'This world, being a modification, ceases from manifestation, because its eternality is denied'-and-' Even when thus ceasing, it continues to exist, because its utter destruction is denied," Here we find that what the Probans in the former reasoning-'because its eternality is denied '-means is that 'no modification can be eternal'; and this is certainly contradictory to the doctrine enunciated in the second statement, that 'even when ceasing, the modification continues to exist.' "How?" Well, the 'manifestation' of a thing is only the attaining of existence, and 'ceasing' is falling off; so that if the modification, when fallen off (apeța, ceasing) from its existence (vyak!eh, from manifestation), does 'continue to exist', then it is not possible to deny its eternality; because the very fact that the modification continues to exist even after manifestation

<sup>• &#</sup>x27;W WUTT' is the reading in both editions ; the Benares edition puts the W within brackets ; but without the W the sentence remains incomplete and meaningless.

<sup>†</sup> In Bh@;ya ou Su. 5-2-4, 'is contradicted ' has been explained as 'is rendered impossible'.

The real words of the बागणावन are बरेसल मेंचे.कर्म विचारा &c. as quoted in the Vartika.

should constitute its *elernality*; and 'denial of its eternality' should necessarily imply the possibility of the modification falling off from its existence; as it is only what actually falls off from existence that has been found to be non-eternal; while that which *still exists* does not fall off from existence; 'so that 'continuing to exist' and 'falling off from existence' are two mutually contradictory concepts; and as such can never co-exist. Thus it is found that the Probans put forward ('denial of eternality') actually rejects the very doctrine (of continuity of existence) on whose basis it is put forward.\*

Vārļika on Sa. 6.

[P. 173, L. 18 to P. 175, L. 3.]

A certain dectrine having been accapted, the Probans contradictory to it is called 'Contradictory'—says the Sūţra. Now what is the real meaning of the Sāļra? Its meaning is that the Contradictory Probans is that which is contradictory to something that has been admitted. When thus interpreted, it includes all the different kinds of the 'Contradictory Probans' which would otherwise remain unnoticed; that is to say, the definition is made to include all the general kinds of the Contradictory Probans; as thus interpreted, the definition

• There is a marked difference between the Bhāşya's account of the Contradictory Probans and that given by the later Logicians. It is clear from the Bhāşya that what is meant is that the Probans is contradictory to some doctrine that its propounder has already accepted. The later Logicians define it as that which proves the contradictory of the proposition which it is put forward to prove. The earliest mention of this later view is found in the Värlika, which puts it forward as an alternative explanation of the definition given in the Suira. The words of the Suira afford directly the meaning assigned to them in the Bhāşya; but how the words may be made to yield the later view is thus explained in the **WINTERT SUMP** are the view of the group of the opponent repeats the view he is going to refute and then propounds the refuting reason, this reason is contradictory] **WAT THEM** are and then to prove a conclusion contrary to what it is meant to prove]. The former of these two explanations is not right; the latter represents the generally accepted view. The Parishuddhi thus distinguishes 'Virodha' from 'Anasiddhanta'.- 'We have

The Parishuddhi thus distinguishes 'Virodha' from 'Apasiddhia'.-- We have Apasiddhasia when the ascertion made goes against what the speaker homself has declared previously on the basis of a more authoritative pramana; while there is Visodha when the assertion itself contains within itself the elements of contradiction, when one part of it asserts one thing and another part a totally contradictory thing.' means 'that which contradicts or sets aside an admitted fact, and that which is contradicted or set aside by an admitted fact'.\*

"In that case [if the Probans is 'Contradictory' when it sets aside or is set aside by an admitted fact], there would be only one kind of 'Fallacious Probans', the Contradictory only [as all the five kinds fulfil the conditions herein laid down as pertaining to the Contradictory]."

It is quite true that the Contradictory Probans is the only one kind of Fallacious Probans. The fact is that all the varieties of Fallacious Pro-

bans are included in the common name 'Contradictory', on the ground of every one of them having the common character of being 'contradictory' in the above-mentioned sense (that it is set aside by or sets aside an admitted fact); but though similar, they are subdivided into five sub-classes; just as though all things are included in the name 'knowable', yet they are " In that case the Contradic ory divided into sixteen classes. itself should not be mentioned (as one of the five sub-classses) " It would not be right to omit it †; as it is necessary to mention that also for the purpose of indicating the special features of what has been comprehended in a general way: just as in the case of 'knowable' (where 'knowable' is mentioned as one of the 16 classes also); (the special feature meant to be indicated is that) while the other four kinds of Fallacious Probans, the Inconclusive and the rest, have a two-fold character-that of being contradictory and that of being inconclasive, or mistimed, or the rest, -- the Contradictory has the single characteristic of being contradictory only; so that being of a kind different, in this respect, from the other four, it is necessary to mention it separately; just as in the common expression of ' trinolapa' [ where though the ' ulapa', soft grass, is already included in ' frina', grass, yet it is mentioned apart from the latter because it is distinguished from

<sup>•</sup> The *Tatparya* adds—That which so sets aside or isset aside, either in its own form, or in its character of Probaus. That is either the Probaus that is put forward embodies in itself a conception opposed to an admitted fact; or it, as a Probaus, proves a conclusion that is opposed to an admitted fact.

<sup>†</sup> The Bib. Ind. edition omits ' T T Carry ' which is necessary.

the other kinds of grass by being soft]. Thus then, inasmuch as the Inconclusive and the other three Fallacious Probans fulfil a two-fold condition, it is only right that they should have a two-fold name ('Inconclusive-Contradictory', 'Mistimed-Contradictory' and so on);—e. g. the Inconclusive Probans is 'inconclusive' because it subsists in the Probandum, and also in its Homologue and its Reverse, and it is 'contradictory', as it makes impossible the form of the Probans as it puts it; and similarly with the other three kinds of Fallacious Probans.

The example (cited in the Bhāsya, of the Contradictory Probans) is—' This threefold world ceases from manifestation, because of the denial of its eternality',—' though ceasing, it continues to exist, because of the denial of its destruction'; here we find that the 'denial of destruction ' (put forward in the second statement) implies that the eternality of the world is an admitted fact<sup>\*</sup>; and this is 'contradicted' by the 'denial of eternality' (in the first statement); so that the two statements are found to nullify each other; and this nullification of each other constitutes their 'contradiction.' †

• The ' जनिस्वस्य ' is wrong ; there should be no "

.

+ It might be urged against this view that the Probans denial of eternality, in contradicting the 'denial of destruction', contradicts a doctrine laid down in the Shastra of the Sankhyas; and as the authority of the Shastra is unimpeachable, the said Probans may be said to be annulled by the more authoritative statement of the Shāstra ; so that this should be an instance of the annulled, rather than of the contra-This is the objection that is sought to be met by the Vartika by dictory, Probans. indicating that the two statements are ' contradictory ' (and not annulled) because they upset each other, and there is no upsetting of only one by the other (as there is in annulment). That is to say, when a Probans is found to be rejected by a more authoritative proof, then alone is there an 'annulment' of it ; while in the two state ments in question, neither is really more authoritative than the other ; both are found in the Shdefra; so that there is no superiority and inferiority; both are of equal authority ; and hence they upset each other ; wherein lies their contradiction .-- Tatparya. It seems however that the Varika does see some force in the objection that might be urged; and therefore proposes another interpretation of the definition ; and it is interesting to note that it is this second interpretation that has been accepted by the later Logicians.

Or. the 'contradiction' may be said to be that between the Proposition and the Probans; i. e. when there is contradiction between the Proposition and the Probans, we have what is called the 'Contradictory' Fallacious Probans. \* " But the 'Contradiction of the Proposition' has been dealt with separately, among the Clinchers ; where then could it appear as a fallacious Probans (as distinct from being a Clincher)? For this reason it is not right to define the Contradictory as that wherein there is contradiction between the Proposition and the Probans." There is no force in this objection; inasmuch as the 'contradiction' subsists in both (the Proposition as well as the Probans), we may speak of it as belonging to the one or the other, according as we choose. When we speak of ' the contradiction of the Proposition and the Probans', it is clear that the contradiction subsists in both; so that if we choose to speak of the contradiction (simply) as in the Proposition t, then we call it the 'contradiction of the Proposition' (which is mentioned among the Clinchers); while if we choose to speak of the contradiction as in the Proposition by the Probans,-or in the Probans, by the Proposition-then we call it a case of the 'Contradictory Probans' (which is mentioned among the Fallacious Probans); so that there is nothing wrong in making use of the two terms, 'Contradiction of the Proposition' and 'Contradiction of the Probans'.! As an example of 'Contradiction

• The example cited in the *Bhisya* will fit in with this definition also: 'ceases from manifestation' means that there is 'ceasing' from manifestation only, and not from existence; while 'denial of eternality' implies cessation from existence, complete destruction; as what is meant by a thing being no i-eternal is that it is liable to cease entirely from existence; and thus the 'denial of eternality', which is the Probans contradicts the Probandum, 'ceases from manifestation'.

† The reading of this whole passage is defective in both editions. The Bib. Ind. reads **x**[त्राया in both places ; the Benares edition reads **x**[त्राया in the first soutence and **x**[त्राया in the second. But from the explanations given by the *Tstparya*, it appears better to read **x**[त्राया : in both places.

. In the first the contradiction subsists in the Proposition,—this contradiction being by any other part of the five factors of the reasoning; it may be that the Proposition contains a contradiction in its own terms, or that it is contradicted by the Probans, or by the Example, or by any other well-ascertained fact; so that the 'contradiction of the Proposition ' is a very much wider term; as is made clear by the *Tatparya* on Su. 5-2-4;—while in the second, the contradiction is of the Proposition (it is true), but (particularly) in the Probans and by the Probans.

Downloaded from https://www.holybooks.com

of the Probans' (where the contradicting is done by the Probans) we have the reasoning-' Sound is eternal. because it is a product' [where the character of being a product, which is admitted by both parties, as subsisting in Sound, and which is what is ascertained by Direct Perception, contradicts - i. e. renders impossible-the Proposition that Sound is eternal]:--an example of the 'Contradiction of the Proposition ' (where there is contradiction involved in the terms of the Proposition itself) we have in the reasoning where the Proposition is stated in the form-' the ever-existent Soul does not exist '\* [Here we have a Clincher, and not a Fallacious Probans] :--as an example where there is contradiction between the Proposition and the Probans [where the Probans not being one that is universally acknowledged, is not authoritative enough to render the Proposition impossible and absurd; and both thus being of equal strength, there is mutual rejection] we have the reasoning-'Substance is something different from

Quality, because no such different thing (differ-Vār : P. 175. ent from the Qualities) is ever found to exist \*

[Here also we have a Clincher, and not Fallacious Probans]. + Another example of 'Contradiction of the Probans' we have in the reasoning-'there is no single entity, because the word entity is used in reference to a group', where the very use of the word 'group' implies the admission of the existence of a single entity; as the group is certainly a single entity. ‡ [This is a Fallacious Probans].

• The contradiction lies in the literal signification of the word 'dimd'; literally the

the other hand, if it is true that no such different thing is perceived, then it is absurd to say that Substance is something different from Qualities. The point in which this second example of 'Contradiction of Probans ' differs from the former example —' Sound is eternal because it is a product'—is this:—the character of being a product is such an universally acknowledged and hence authori-tative Probans that it would render the Proposition of eternality absurd, even if it were (for the time being) not admitted by one of the two parties : as its truth can be oasily brought home to him; while the Probans in the second example—' because the word entity is used in reference to a group '—is one that is based entirely on usage, and as such cannot have its truth brought home to the man not accepting that usage ; so that it would contradict, or render absurd, the Proposition, only if both parties acknowledged its truth — Tatagarut. acknowledged its truth.-Tatparya.

<sup>•</sup> The contradiction lies in the literal signification of the word 'af ma'; literally the word means the ever-existent, being explained as af &f is all at your are fast. † This is precisely the example that has been cited by the Bhāya unter S0. 5-2-4, where the following explanation is added, to show that no superiority attaches either to the Proposition or to the Probans. 'If it is true that Substance is something different from Gaality (as the Proposition puts it), then it is absurd to say that nothing differ-ent from Colour and other Qualities is ever found to exist (as the Probans puts it); on the other hand, if it is true that no such different thing is perceived, then it is absurd

### Sutra (7).

The Neutralised Probans-the Third Fallacious Probans.

THE NEUTRALISED PROBANS IS THAT WHICH IS PUT FORWARD TO ESTABLISH A DEFINITE CONCLU-SION, WHILE IT IS ONE THAT ONLY GIVES BISE TO SUSPENSE (AND VASCILLATION) IN REGARD TO THE POINT AT ISSUE.

#### Sūțra (7).

#### BHISYA.

## [P. 53, L. 2 to L. 12.]

The term 'prakarana', 'point at issue', stands for the two opposite views on a doubtful question, neither of which is definitely ascertained ;-the 'chinta', 'suspense', in regard to such point at issue, consists in that desire to ascertain the truth, that whole process of investigation, which, starting with the doubt, ends with the definitive cognition ;--- now that Probans which really only gives rise to the said suspense, if nut forward as leading to definitive cognition, does not differ (in point of being doubtful) from the point at issue ; as both sides would be equal (equally doubtful); and thus being similar to (sama) the point at issue (prakarana), it does not lead to any definite conclusion. Example-' Sound is non-eternal, because we do not find in it the properties of the eternal thing; and we have found, in the case of such things as the Dish and the like, that what is not found to possess the properties of an eternal thing is non-eternal.'

<sup>•</sup> The two opposite views, which constitute the 'point at issue ', have been here called 'prakarana' in the sense that these views are what are made the probandum (eddhyafoina prakriyafs) by the two parties......The 'supense' in regard to these views, is due to the real truth on the point being not known ; e. g. when a man puts forward the fallacious reasoning—' Sound is mon-eternal because the properties of an eternal thing are not found in it'--the person to whom this is addressed falls into a suspense, as he does not find, in Sound, either such properties as are invariably concomitant with e'ernality, or such as are inseparable from non-eternality; having therefore his doubts thus aroused, he proceeds to enquire and investigate. So that the urging of the properties of an eternal thing, as brought forward to prove eternality,—while it leads only to a doubt as to eternality and non-eternality,—constitutes the Fallacious Prolems called 'Prakaragaama'.....' Both sides would be equal '-i.a. just as the not finding of the properties of the eternal thing would indicate non-eternality indicate eternality.........The explanation of the term as ' similar to the point at issue' (prakaranasya semach) is only by way of indicating what the etymology of the word signifies; it is not meant that similarity to the point at 'saws constitutes the denotation of the term; in fast what the term really denotes is only being means the set only equally to the properties is only being and the term of the sense constitutes the denotation of the term; in fast what the term of th

That reasoning, in which what is put forward as the Probans is the character that is admitted (by both parties) to be common (to the Probandum and its Reverse), is 'equal to doubt' (in not leading to a certain conclusion); and such a Probans, therefore, has been called 'Indecisive';— in the case of the Prakaranasa ma], on the other hand, what gives rise to the 'prakarana', the point at issue, is (not D.ubi, but) only that factor of Doubt which consists in the fact of there being found nothing which could favour either of the two opposite views; e. g. in regard to the reasoning cited, we find that in Sound, properties of an eternal thing are not found, just as properties of a non-elernal thirg are not found; and this not finding of peculiarities favouring either of the two views gives rise to 'suspense in regard to the point at issue'. "How?" Because in the contrary case (i. e. in the case of our finding peculiarities favouring either of the two views), there would be an end to the 'point at issue' (one of the views being definitely ascertained; for example, if we actually found, in Sound, properties of the elernal thing, it would no longer be a 'point at issue'; or if we found in it properties of the noneternal thing, then also it would cease to be a 'point at issue'. Thus then we find that, inasmuch as such a Probans gives rise to (lends support to) both the opposite views, it cannot lead to a definitive cognition in regard to either one of them. \*

#### Vartika on Su. 7.

### [P. 175, L. 6 to P. 176, L. 7].

The Neutralised Probans is that which §c. §c.—says the Sūţra; now the question arises—From what does the 'suspense in regard to the point at issue 'arise? It arises, we reply, from the real truth not being known. Inasmuch as when the real truth in regard to a thing becomes known, all suspense with regard to it ceases, the conclusion is that what gives rise to the suspense in regard to the point at issue is the not

<sup>\*</sup> The difference between the Inconclusive and the Neutralised probans, as brought out in the Bhāya, is thus explained in the *Tâtparyu*—The Probans in the reasoning 'Sound is non-eternal, because properties of an eternal thing are not found in it' would be called 'Inconclusive', only if the *not-finding of the properties of a eternal* thing were known to subsist in a thing which is admitted by both parties to be eternal; or e. g. the not-finding of the properties of the non eternal thing were known to subsist in a thing admitted by both parties to be *non-eternal*. As it is however, neither of these two conditions is fulfilled by the case of the eternat hing, and also the *not-finding* of the properties of the son-sternal thing; that is all ; and these two circumstances neutralising on another, we call the Probans ' neutralised.'

knowing of the special features of a thing, which is known in a vague general way. For example, in the reasoning—' Sound is eternal because it is not found to possess the properties of a non-eternal thing '—we find that because there is 'nonperception' (of the real character, and of the properties of the eternal as well as of the non-eternal thing), there is doubt (*i. e.* there are two opposite views); so that what is put forward as the Probans is not a true Probans.

An objection is raised—" This Probans does not in any way differ from the Unknown Probans; because the nonperception of the properties of the non-eternal thing in Sound is as much unknown (lit. to be proved) as the Eternality itself [so that the reasoning cited affords the example of only the Unknown Probans ; which shows that the Neutralised Probans should not be mentioned apart from the Unknown]." •

It is by no means the same as the 'Unknown' Probans; as in the case of the 'Neutralised' Probans what is put forward as the Probans is that which only gives rise to doubt (diversity of views); that is to say, when the character put forward as the Probans is as much ' unknown ' and (' to be proved ') as the Probandum itself, it is called the 'Unknown'; while when the character put forward as the Probans is only such as gives rise to doubt and suspense (and diversity of views), it is called the ' Neutralised ' Probans. †

• The case of the reasoning cited is held to be one of neutralised Probans, in view of the fact that just as there is non-perception of the properties of the eternal thing, so there is also the non-perception of the properties of the non-eternal thing; hence both are neutralised by each other. It is contended by the opponent that under the circumstances, both the non-perceptions would be uncertain, unascertained; and as such this should fall under the 'unknown' Probans. The *Tatparya* adds—Both the opposite views are 'Sādhya' to be proved; and it is these that constitute 'prakarana', according to the Bhāşya; so that ' prakarana' and 'sādhya' being synonymous, 'prakaragasama' comes to be only another name for the sādhyasama, the 'unknown' Prot ans, defined in the next Sāţira.'

† So that even though the etymological signification of the two names 'sādāyasama' and 'prakaraņasamu' is the same, their actual meanings are entirely different : the 'Unknown' being that which is uncertain and still to be ascertained ; while the 'meutralised' is that which is thwarted by an equally doubtful contrary.

There are some people who hold that there is no difference between the 'neutralised 'Probans and the 'inconclusive' Probans, as both of them give rise to doubt. But for these people there would be no difference between Perception, the Inconclusive Probans and the Neutralised Probans; as Perception also is a cause of doubt! "[In the case of Perception, it is not Perception alone that produces doubt, but] Doubt is produced by a group or composite (of three factors): so that the said absurdity cannot arise in connection with Perception. That is to say, Doubt is brought about by a composite cause, consisting of the following three factors-the perception of similarity, uncertainty in regard to the peculiar features, and the remembrance of the peculiar features (as shown above, under Sū. 1-1-23); and it is not brought about by perception alone; hence (not being a cause of Doubt) Perception could not be regarded as non-different from the Inconclusive Probans and the Neutralised Probans." The assertion that Doubt is brought about by a composite or group does not set aside the fact urged ; i.e. when you say that Doubt is brought about by a group (of causes), you do not deny the fact of Perception being a cause of Doubt; so that what we have urged against you still remains in force. \*

Then again (there is a further difference between the Inconclusive and the Neutralised Probans)—What is meant by a reasoning having a 'neutralised' Probans is that the character that it puts forward (as the Probans) is one of two contrary characters, both of which are equally unperceived; that is to say, when both the peculiar characters of a thing are equally not-perceived, if one of them is put forward for the var : P. 176. removing of the doubt, it is a case of the 'neutralised' Fallacious Probans; specially as it is impossible to regard the non-perception of both peculiar features as a 'neutralised' Probans; that is to say, it is not

<sup>•</sup> When you say that the cause consists of a group, it follows that every component of this group is itself a cause, as a group of non-causes could not be a cause.

possible to indicate (as neutralized Probans) the non-perception of both pecularities.\*

Some writers have cited (as an example of the Neutralised Probans) the character of being different from the body (as put forward to prove the eternality of the Soul); but this example does not fall within the scope of the Sūtra; because if the man knows the truth (in regard to the Soul's eternality), -then, even though he perceives its being different from the body,-he does not proceed to enquire into the matter : while, if he does not know the said truth.---if he perceives its being different from the body,-he proceeds with the enquiry : so that 'being different from the body' is an 'Inconclusive' Probans; and as such does not fall within the scope of the present Sútra. †

#### Sūlra (8).

(4) The Unknown Probans.

THE UNKNOWN PROBANS IS THAT WHICH. BE-ING STILL TO BE PROVED, IS NOT DIFFERENT FROM THE PROBANDUM. 1

#### Bhasya.

## [P. 53, L. 14, to L. 19.]

[As an example of this Fallacious Probans, we have the reasoning]-'Shadow is a substance',-the Probandum, to prove which is put forward the Probans 'because it has motion';

• This is added with a view to meet the objection that the non-perception of two contrary charact rs would be common to both the opposite views ; so that such a Pro-

non-eternal things.

1 'That whose subsistence in the Subject is as unsettled as that of the Probandum'-says the wing wing . The Tappa ye has the following notes on the text of the Sütra :- The definition here provided is meant to include all the four kinds of  and this Probans does not differ from the Probandum, inasmuch as it is still to be proved; and hence it is an 'Unknown' Probans. Because that Shadow 'has motion' is not known, and it has got to be made known, just as much as the Probandum (that Sound is a substance). What has got to be 'known' or ascertained is the following—'Does the shadow move, like the man ? or is it that as the object obstructing the light moves along, there is a continuity of the obstruction, which leads to the continuity of the *absence of the light*, and it is this *alsence of light* which is perceived (as the shadow)?' What actually happens is that as the object moves along, it obstructs certain portions of light, and what is perceived as ' shadow' is only the continued absence of those portions of light that are obstructed (by the moving object); as ' obstruction' is only negation of approach.\*

#### Vārtika on Sū. 8.

## [P. 176, L. 9 to P. 177, L. 6.]

The Unknown Probans is that which, being still to be proved, is not different from the Probandum,—says the Sūtra. The meaning of this is that when the character put forward by way of proof is such that it does not differ from the Probandum, i. e., which is such as has still got to be made known, just as the Probandum,—it is that Fallacious Probans which has been called the 'Unknown.' We have an example of this in the reasoning—'Shadow is a substance because it has motion';

proved and as such similar to the Probandum. If the definition had been stated simply as —'the solid probans is that which is unknown', then, we could not include in this that Probans which is unknown to only one of the parties (and known to the other); while this becomes included when we add utwitering, as the Probandum also is unknown to only one of the two parties. And if we had only the term utwitering then this would apply to the utwitering only; as it is only this that is exactly similar to the Probandum,—in that both are unknown before proof (by one party only) and both become known after proof; and all the other kinds of unknown would become excluded. Hence the Sütra has added the term 'sadhyatuff', being still to be proved; and is the Probandum also is still to be proved; or else it would not be a 'probandum' at all ; hence the Probandum is called 'unknown' because it is still to be proved; and some of the unknown are such as wanting in proof only temporarily (such as unutried), while others have this want permanently, not being capable of being proved at all ; and to this latter class belong the unutried and hence it applies to the Probandum also. But we should not lose sight of the fact that the definition has to be taken as subject to the general definition of 'Fallacious Probans'; so what the definition means is that probandum.

• In the last sentence, the readings adopted in the body of the text are defective; the correct readings are supplied in the footnotes; and these are supported by the two Puri Mss. also.

where we find that the moving of the shadow requires proof exactly as its substantiality does. [In this manner the reasoning provides us with an example of the Probans which is itself absolutely Unknown, which is the first kind of 'unknown' Probans, the Svarupasiddha.]. "But its mobility follows from its being seen in different places. That is to say [in support of the mobility of the shadow we have the following fivefactored reasoning]-'Shadow is mobile, because it is found in a different place, -everything that is found in a place other than where it has been before is found to be a moving object. as for instance, the Jar,-shadow is found in a place different from its former place,-hence shadow has motion." This argument is not right; as the Probans herein put forward is one whose substratum or basis is unknown [which is the second kind of the Unknown Probans, the *āshrayāsiddha*]; that is to say, even as you put it, your Probans is one whose substratum is unknown; the perceiving of the shadow in a different place would be possible (and apt) only if the shadow had substantiality [as it is only a substantial thing that can be seen in different places]; as a matter of fact however the substantialily of the shadow is still unknown (unsettled and unproved);\* so that the Probans (being found in different places) comes to be one whose very substratum or bisis is unknown (and unsettled). Even admitting that there is perception of the shadow in different places, we find that it is still tainted by the fallacy of being 'unknown', in the sense that it is capable of being otherwise explained; that is to say when one perceives the shadow in a place other than it occupied before, this is due to other causes than the moving of the shadow [i. e., it is purely circumstantial]; and being due to other causes it does not prove † what it is meant to prove. [Thus providing us with an example of the third kind of the 'Unknown Probans' that which is 'otherwise known,' Anyalhasiddha,' oircumstan-

<sup>&</sup>lt;sup>o</sup> The *Taiparya* supplies a series of arguments against the substantiality of Shadows. The Mimānsaka Bhāttā admits *Tamas* as a substance; but the Prābhākara holds it to be mere *absence of light*. (See Prābhā Mim. pp. 266—268). + Bead wivefa for wivia

tial.] "But how otherwise can the perception of the shadow in different places be explained?" We can explain it as due to the continuity of the absence of light following from the continuity of the object obstructing the light; that is to say, as the object obstructing the light moves along, we perceive things (the spot of earth for instance) qualified by the absence of light; and it is to this 'absence of light' that we give the name 'shadow.'

Thus it is shown that there are three kinds of the Unknown

Var: P. 177. Probans—(1) the absolutely unknown, which is exactly similar (in this respect) to what is sought to be proved by it, (2) that whose basis is unknown, and (3) that which is otherwise known (the circumstantial). †

The reasoning—'Sound is eternal, because it is intangible' is not a right example of the Unknown Probans; as the intangibility of sound is neither to be proved, nor is it one whose substratum is unknown, nor is it capable of being otherwise

• It is only when the relation of the Probans to the Probandum is *natural* that the former can prove the latter; and not when it is circumstantial or accidental. The well-known example of this circumstantial Probans is provided by the reasoning— 'this child must be dark because he is Maitra's child,' where the darkness of the other children of, Maitra is due to causes other than that of being Maitra's child; it is due to such causes as the eating of a particular kind of food by their mother. So that the relation between 'Maitra's child' and 'darkness' is purely accidental; and as such the one is possible without the other. In cases of valid Probans, the Probans is such that it cannot be explained except on the basis of the Probaudum, which it therefore establishes; but here the Probans being capable of being explained otherwise than on the basis of the Probandum, it does not necessarily prove this latter. This is what is meant by the Probans being 'anyafkāsiādān', 'Otherwise known.'

† The Variika has deduced examples of all three from the single reasoning cited in the Bhaiya; the Talparya supplies distinct examples:—(a) In the reasoning 'Sound is eternal because it is visible,' the visibility of Sound is something absolutely unknown; (b) in the reasoning 'there can be no God, because he has no body,' the bodileseness put forward has no basis or substratum if there is no God; and (c) 'l.e is dark because he is Maitra's child' has a Probans, 'being Maitra's child,' which is one whose relation to the Probandum is purely accidental. The Parishad ihi adds—'Where the Subject is unknown we have Ashrā yāsiddha (b); where the Probans itself is unknown we have Svarāpīsiddha (a); and where the concomitance it unknown we have Vyāpyā trāsiddha. By 'unknown,' is meant either uncertainty or conviction to the contrary cxplained. We have already provided proper examples of the Unknown Probans in accordance with our explanation of the definition provided by the Sūţra. So that the objection urged (by the Bauddha) on the basis of the said example ('Sound is eternal because it is intangible') is entirely peside the mark; in fact it only shows that the objector has understood neither the meaning of the Sūţra, nor the literal meaning of the words, nor the exact nature of the Fallacious Probans, nor the exact nature of the wrong Example.

# Sūţra (9).

(5) The Belated or Mistimed Probans.

THE BELATED OR MISTIMED PROBANS IS THAT WHICH, AS ADDUCED, IS BEHIND TIME.

### (Sa. 9.)

#### - Bhāsya.

### [P. 54, L. 1, to P. 55, L. 5.]

When one factor of the thing adduced as Probans is found to be affected by lapse of time, it is said to be adduced behind time; and it is then called 'Belated.' Example—'Sound is eternal, because it is manifested by conjunction, like Colour; the Colour that is manifested by the conjunction of light with the jar is one that was in existence before, as well as after, its manifestation; similarly the Sound also that is manifested

560

<sup>&</sup>lt;sup>6</sup> A Bauddha writer has tried to find fault with the definition provided by the Süţra; and he has done this on the basis of an example that he has cited. He says that the reasoning—'Sound is eternal because it is intangible, like, Buddhi'- provides an example of the Unknown Probans; and yet it does not fulfil the conditions of the definition. Because, he argues, the term 'sidhydrishistah' in the Süţra can only mean that whose example is not different from the Prolandum; and yet the example in the said reasoning, Buddhi, is one that is known to be not eternal; so that it is not 'not different from the Probandum,' which is eternality. The Värika admits all this and meets it by simply pointing out that the example taken up by the objector has shown that—(a) he has not understood the meaning of our Süţra; the present Sūţra is meant to provide a definition of the Unknown Probans, while the reasoning cited by him provides an instance of the Indecisive Probane, which has been defined in a preceding Sūţra;—(b) that he has not understood the literal signification of the term 'sūdhydishistah,' which was never meant to be taken as a Baluwriki compound as the objector has taken i;—(c) that he does not understand the difference between the wrong probans and the wrong example; as what he should have pointed out in the reasoning was the defect in the 'Probans,' intangibility'; while what he has done is to point out a defect in 'Buddhi' which is only an Example.

by the conjunction of the drum and the stick, or by the conjunction of the wood and the axe, is one that is in existence before and after its manifestation; so that, being minifested by conjunction, Sound must be regarded as eteraal. This is not a valid Probans; because when adduced, it is behind time.

elt is clear from this passage and from the explanation of the **willing training** as given here and in the Vartika, that the conception of this fallacy has undergone a complete change at the hands of the later logicians. The latter regard that Probans as minited and fact ; when, for instance, the coolness of fire is adduced as Probans ; in accordance with this view they have given to their fallacy the name of urfue, 'annulled ;' while what the Bhisya means is that we have the Wisian fallacy when one part of the Probans is found to be such as is not true at the time in connection with that with which it is put forward ; e.g. 'manifested by conjunction,' as adduced to prove the eternality of sound, is found to be a Probans of which one part, conjunction, is not present at the time that Sound appears, though it was there before that appearance ; so that it is behind time, 'belated.' The name wiwis w-Belated -can rightly be applied to only this ; the wifes of the moderns was never true ; so that the name 'belated' cannot apply to it. With a view to meet this discrepancy between the two views, the *Tútparya* has adopted the method of a very forced interpretation of the Bhāşya. It says that the open ng sentence of the Bhāşya states both views—the 'svamaţa,' his own view, as also the 'paramaţa,' the view of others; the *Tútparya* taking care to brand what clearly is the Bhāşya view as 'paramaţa,' and the m dern view as 'svamaţa'; and it gets the two views out of the two meanings of the word artha, 'thing,' in the Bhasya. According to the view of the Tapparya, 'thing' stands for the Subject of the Proposition, in which the Probans should subsist; and the Subject-like every other thing-has two factors, the thing itself and its qualities : and when one of these factorsthe quality-is found to be affected by lapse of time, we call it 'belated'; e.g. when coolness of fire is urged as proving its eternality, we find that the coolness, which is adduced as a quality of the subject, Fire, is 'belated,' because its contrary has been actuced as a quarry of the subject, *rive*, is "celated, because its contrary has been already definitely ascertained. By the view of the *Bhiya* itself the 'thing' is the *Probans* itself; and it is called 'belated,' when not the whole of it, but only a part of it is found to be *behind time*; as in the case of the Probans 'manifested by con-junction'; where it is found that though the manifestation is true, the conjunction has passed off when the Sound appears. And when the *T&t parya* fluds the ex-ample given in the *Bhiya* not fitting in with its own view, it seeks to meet this difficulty by saying that the example according to the true view has not been given in the Bhinya, because several examples of it have already been given; when for instance it has been said that no conclusion can be deduced from what is contrary to well-ascertained fac s of perception or to scripture; so that the Bhūgya This method however is not cities an example only according to the paramata. quite in keeping with the practice of Bhasyas. All Bhasyas-that of Vatswayana among them-err more on the side of diffuseners than of conciseness.

The Bhāşya view really does not lend support to the modern view of the fallacy of Annulment; if only a pert of the Probans is 'behiud time,' it cannot be said to be contrary to, and hence annulled by, well-accrtained facts of perception etc.; so in order to remove this difficulty, the Tāțparya has taken the term 'one part' of the Bhāşya to refer to the Subject, and not to the Probans. As regards the objection that might be urged against the Bhāşya that it does not—if its own explanation of the Sūţra is accepted—mention the 'annul ed' at all among the Fallacious Probans,—it has to be borne in mind that a true Fallacious Probans is that which has some semblance of being a valid Probaus, and as a matter of fact, anything so absurd as the coolness of fire cannot be used to have any 'semblance' to a valid Probans. Then again, it has to be borne in mind that we can apply the term 'behind time' or 'belated' to only what was true before, but is not true at the time in connection with that with which it is adduced; and this also can never apply to anything so absurd as coolness of fire. So that the modern view would appear to be unsupported, not only by the Bhāşya and the Vār{ika, but also by the Sāfra. In the case of Colour, the time at which the manifesting conjunction appears does not go beyond (i. e. does not differ from) that at which the manifested colour exists; as it is only during the time at which the conjunction of the light and jar is present that colour is perceived; while Colour is not \* perceived when the conjunction has ceased to exist. The case of Sound however is entirely different; for instance, it is only after the conjunction of the drum and stick has ceased that Sound is heard by the man at a distance; in fact it is heard at the time of the Disjunction (i. e. at the time that the stick has ceased to touch the drum); so that the manifestation of Sound is beyond the time of the conjunction; and as such it cannot be caused by that conjunction ; because as a rule when the cause has ceased to exist, the effect does not appear [so that if conjunction were the cause of the manifestation of Sound. the latter should cease after the former has ceased]. Thus then, it is found that what is adduced as the Probans is not 'similar to the example '; and as such it cannot prove the Proposition ; hence it is a Fallacious Probans. +

The Bauddha logician has defined the 'Belated Probans' as that which is adduced at a time other than that at which it should beadduced; e. g. when one party has urged the reasoning simply as Sound is eternal, like the jar', and he adduces the Probans, 'because it is a product', only after he has been asked 'Why?' Having thus explained and exemplified the Sutra. the Bauddha has found fault with it as follows :- The question--- 'Why?'--- that the Opponent puts--- is it put aller the first party has completed his say, or before that? If the former, then the first party is open to the clincher of ' Deficiency ', his reasoning being deficient in that it does not state the Probans at all, and hence it cannot be a case of Fallacious Probans being urged. If on the other hand the question is put before the first party has completed his say, then the **Probans** does not cease to be a truly valid Probans, simply because it is urged after some time; if it fulfills all the condi-

<sup>•</sup> This **w** is absolutely necessary. It is found in the Pari Mss. † The *Talparya* remarks that the Fallacious Probans as here explained would only be a form of the Unknown Probans, and as such the 'Belated' should be the same as the 'Unknown'; and the fact that, even hough this objection should have been brought forward by the Bhaya if the explanation provided by the Bhaya was really para-mata, yet it has not been urged—has been met by the specious reasoning that the defect was so apparent that the Bhaaya did not think it worth while to urge it. But we have to remember that the 'Belated' as explained by the Bhaaya, is not included in any of the three kinds of 'Unknown' accepted by the older logicians ease the wat is and weating (see above); it falls under what the later logicians have called the wiwifus the parly 'unknown ', of which however no mention is found either in the Bhasua or in the Vartika.

tions of the valid Probans, it does not lose its validity simply because of the interruption by the over-zealous Opponent. This is met by the Bhasya by rejecting the suggested interpretation of the Sutra] ----- The Sutra does not mean that ' belatedness ' consists in the reversing of the order of the Factors of Reasoning. Why? Because we have the general law that-'when one thing is by its inherent capability connected with another thing, the connection subsists also when they are remote from one another, and on the contrary when the two things are not connected at all, mere proximity is ineffective';--and according to this law even when the Probans is stated in an order other than the usual one, it does not lose its character of the 'Probans'-which consists in its similarity or dissimilarity to the Example (Su- 4-1-34 and 35); and so long as it does not lose the character of the 'Probans', it cannot be called a 'Fallacious' Probans. And further, the 'reversing of the order of the Factors' is what has been stated (in Sū. 5-2-11) as constituting the Clincher of 'Inopportune'; so that if the same were mentioned here (as a 'Fallacious Probans'), that would be a needless repetition. Thus we conclude that such is not the meaning of the Sūtra.\*

### Varlika on Su, 9.

### [P. 177, L. 8 to P. 178, L. 8.]

The 'Belated' Probans is that which, as adduced, is behind time—says the Sūţra. That is to say, that Probans which, as adduced, has one factor of it affected (tainted) by lapse of time, and is thereby partially vitiated, is said to be 'behind time', and this is what is called 'Belated.' Example— 'Sound is eternal, because it is manifested by conjunction.' As a matter of fact, at the time that Sound is heard, the Conjunction is not there ; so that 'Conjunction ', which is adduced as the Probans, is one that is beyond the time of the hearing (of the Sound); that is, there is no Conjunction at the time

<sup>&</sup>lt;sup>6</sup> The examples of 'annulment' by the more authoritative contrary cognition of the Subject are thus supplied by the *Parishuddhi*—(1) 'The jar is all-pervading, because it is an entity, like **Akāsha**'—where the all-pervadingness of the jar is opposed to what we know of the jar by perception ;—(2) 'the atom is made of component parts, because it is corporeal, like the jar '—where the conclusion is opposed to what we know of the atom by Inference ;—(3) 'the Meru consists of stone, because it is a mountain, like the Viadhya '—where the conclusion is opposed to what we know of the Meru from the scriptures. The following is an example of the annulment of the conception of the Probans as adduced—(1) 'Water and thir are ho', because their touch is different from that of Earth, like Fire'—where the fact of the touch of Air being different from that of Earth is opposed to our perception ; and so on.

that the Sound is heard; for instance, when wood is being cut, the sound of the cutting is heard after the conjunction of of the wood and the axe has ceased.

"This Probans—' because it is manifested by Conjunction'—is no other than the *Inconclusive*; inasmuch as it has been found that *non-eternal* things also are so manifested; for example, the jar (which is manifested by the conjunction of light)."

There is no force in this contention; as in the reasoning (cited by us as the example) what is meant to be proved by manifestation by conjunction is only continuity of existence; that is to say, what is meant by the proposition is not that sound is eternal, everlasting, but that it continues to exist, it stays; so that the Probans cannot be said to be ' inconclusive'; for nothing that does not stay is ever found to be ' manifested by Conjunction' [and if it were so found, then alone could the Probans be regarded as ' inconclusive'].

The Sagra cannot mean that what constitutes the 'belatedness' of the Probans is the reversing of the order of the reasoning-factors; as the power (of the factors) is such; that is to say, by merely being stated last (after the other factors have been stated) the Probans does not lose the character of 'Probans', which consists in 'similarity to the Example'; and so long as it does not lose the character of 'Probans', it cannot be called a 'Fallacious the character of 'Probans.' Then again, the 'reversing of the order of the Factors' has been mentioned as a Clincher, called 'Inopportune' (under Sū. 5-2-11); so

Var : P. 178.

that if the same were meant by the present Satra' also, there would be a needless repeti-

tion. "But that reversing of factors which constitutes the 'belatedness' of the Probans consists in the fact that it is adduced after the Proposition has been levelled down; and certainly this is not the same as the Clincher "Inopportune '[which consists in the whole reasoning being stated at a single stretch, in which the Probans is stated

last, instead of coming just after the statement of the Proposition]." What you mean is that (while in the 'Inopportune' reasoning, all the factors are put forward at a single stretch, but in an improper order.) what happens in the 'Belated' Probans is that it is adduced after the Proposition has been levelled down to the position of an unproved conclusion ; so that the latter cannot be the same as the Clincher.\* But in this case it behaves you to point out by what it is 'level-"It is levelled down by the non-mention of the led down.' If the 'levelling down' is due to the non-Probans." mention of the Probans,-in what way does this constitute any defect in the Probans? "It is certainly a defect. of the Probans that it is adduced last." That it is stated last is not the fault of the Probans; it is the fault of the speaker; as a matter of fact, by itself the Probans cannot prove anything; its doing so is dependent upon its being adduced by the reasoner; so that the fault lies with the reasoner, and not with the Probans ; specially as the Probans remains efficient (also when adduced afterwards),-as has been explained (in the Bhāşya).

Thus then, we conclude that the Sūtra cannot mean that the 'belatedness' of the Probans consists in the reversing of the order of the reasoning Factors,—nor in its being adduced after the Proposition has been levelled down.

Lecture (3). CASUISTEY. (Sūţras 10—17) Bhāşya on Sū. (10). [P. 55, L. 6 to L. 8]. Next we proceed to describe Casuistry. \* Sū. 10.

> CASUISTBY CONSISTS IN OPPOSING A PROPOSI-TION BY ASSIGNING TO IT A MEANING OTHER THAN THE ONE INTENDED. (Suita 10).

It is not possible to cite specific examples in connection with the general definition; they will be cited along with the definition of the several kinds of Casuistry.

Vārļika on Sū. 10.

[P. 173, L. 14 to L. 16].

Casuistry consists &c. &c.—says the Sūţra. A certain proposition having been put forward (by the first party), containing a word with a wide signification, which conveys more than one meaning,—if opposition is offered to it by imposing upon it a meaning entirely different from that intended by the person (propounding the proposition),—this constitutes Casuistry.

Bhāşya on Sū. (11),

[P. 55, LL. 8-9].

The division of Casuistry is as follows-

Sūţra (11).

IT IS OF THREE KINDS-(a) VAKCHHALA, VERBAL

· CASUISTRY, (b) SAMANYACHOHHALA, GENEBALIS-

ING CASUISTRY, AND (C) UPAOHABACHCHHALA,

FIGURATIVE CASUISTRY.—Sūţra (11).

Vārțika on Su. 11.

[P. 178, LL. 16-17].

It is of three kinds—This is meant to restrict the number of the particular kinds of Casuistry; and as in other 'cases,

c.

<sup>•</sup> The sequence is thus explained by the *Parishuddhi*—When the disputant finds that his reasoning is vitiated by a fallacy, and he finds himself unable to remove the fallaciousness, he, still desperately trying to snatch victory to himselt, puts forward

so here also, these three kinds include all the several kinds of Casuistry.

[P. 55, L. 11 to P. 56, L. 18].

From among these-

### Sūįra (12).

(A) VERBAL CASUISTEY CONSISTS IN ASSUMING A MEANING OTHER THAN THAT INTENDED TO BE CONVEYED BY A WORD, — WHEN THE MEANING (INTENDED) IS NOT DEFINITELY SPECIFIED. — Sūţra (12).

For instance, when the proposition is put forward in the form-'navakambalo' yam māņavakah,' where what the speaker means is that 'the young boy is one whose blacket is new,' the compound word 'navakambalah' being equivalent to the expression 'navah kambalo yasya,-though this latter uncompounded expression sufficiently clearly defines the particular idea desired to be conveyed, the same is not done by the compounded word 'navakambalah' (which is ambiguous, being capable of affording more than one meaning); --- and what the Casuist does is to assign to the compounded word a meaning other than the one intended by the speaker, and expounding the compound as 'nava kambalah yosya', takes it to mean that the young boy is one who has nine llankels, and says-'you say that the young boy has nine blankets ';-having thus imposed upon the man an idea that he never intended •to convey, he proceeds to oppose the assertion by showing its absurdity-'this boy has only one blanket, where are the nine blankets?' Thus this is a case of Casuistry which is urged on the occasion of an ambiguous word being used; and being based upon a word, it is called ' Verbal' Casuistry.

This Casuistry is to be met by urging the necessity of the Casuist himself pointing out the peculiar circumstances favouring his own interpretation of the ambiguous word; for instance, the word '*Navakambalah*' is ambiguous,—signifying 'one who has a *new* blanket' and also 'one who has *nine* blankets'; under the circumstances, when you take it to mean

improper auswers -- of which there are two kinds--Casuistry and Futile Rejoinder. The former comes first, as though wrong in sense, it is verbally and apparently right, while Jeff is more absurd, as it involves the contradiction of oue's own assertions.

'one who has nine blankets' (and then turn to me and say that the man has only one blanket, and not nine), this is hardly fair: as it is necessary to point out the peculiar circumstances that favour either of the two possible significations,-from the statement of which peculiar circumstances it would be known that the word (in the context in question) expressed that particular meaning; -- as a matter of fact you have no such peculiar circumstances that you could urge (in favour of your own interpretation); so that what you have brought against us is a false and futile attack.\* Further, the connection of a word with its denotation is well known in the world to consist in the conventional restriction of a certain word having a certain denotation-in the form that 'of such and such a verbal expression such and such is the denotation'; and this conventional restriction is found to be general (wide) in the case of general terms, and particular (specialised) in the case of particular terms; and whenever these words are used, they are used according to previous usage, and never in a way in which they have never been used before; the use of a word again is only for the purpose of bringing about the cognition of its meaning, and it is only when the meaning has been comprehended that there follows any activity (as resulting from the hearing of that word). Thus the use of words being for the sake of bringing about the comprehension of its meaning, the exact usage of the general term is determined by the force (of circumstances); i.e. when such expressions are used as-'take the goat to the village,' 'bring butter', 'feed the  $B_t \bar{a}hmana$  '-every one of these words ('goat' 'butter' and 'brāhmaņa') is a general or common term, and yet it is applied, in actual usage, to particular individuals composing what is denoted by that term ; and to what particular individuals it is applied is determined by the force of circumstances; the term is applied to that particular individual (goat, for instance) with which it is found possible to connect the direction of the particular activity (of taking to the village, for instance); it being absolutely impossible for the entire generality (of all Goats f. i.) to be connected with the direction expressed by the words ['take to the village',] [no one man at any one time could take to a village all the goats that there are in the world, all of which are denoted by the general term 'goat']. Similarly the term under discussion, -' navakanbalah' is a general term [as it has two significations]; and as such, when it is used it has to be taken as applied to that to which it has the capability to apply, under the circumstances;—so that when it is addressed in regard to a person having only one *new* blanket, it has to be taken as signifying 'one who has a new blanket'; and under the circumstances, the *possessing of nine blanket's* being found impossible, the word cannot signify 'one who has *nine* blankets'. Thus when you assign to your opponent's word a meaning that it cannot possibly convey, your attack must be regarded as entirely futile.\*

#### Vārțika on Sū. 12.

[P. 178, L. 17 to P. 179, L. 10.]

'When the meaning is not definitely specified 'fo.--says the Sūţra. What is said to have its meaning not definitely specified is that word or sentence which, as actually heard, is general (wide in its scope); as an example of a sentence that is general or ambiguous, we have-- 'this boy is navakambala' [which means 'the boy has a new blanket' and also 'the boy has nine blankets']; and an example of the general or ambiguous word we have the word 'ashvah' [which when taken as a noun, denotes the horse; and when taken as a verb, denotes 'you have become large', 'ashvah' being the First Preterite, second person, singular form of the root 'shva'].

An objection is raised-" It is never possible to speak.of

Var. P. 179. anything by means of an unspecified or general term; as in actual usage no such word is ever used whose denotation is not specified. In fact nothing can be spoken of by means of an unspecified term; nor is it right to use any such term; whenever any expression is used,

<sup>&</sup>lt;sup>•</sup> At the time that the exact denotation is fixed by convention for the first time, it is not said to pertain to any particular individual; the denotation fixed is entirely generic in its character; and it comes to be applied to particular individuals only through the force of such circumstances as the particular context in which the term is used, the particular person using it, the particular person to whom is addressed, the particular time and place at which it is used, and so on. So that when the speaker has used a general term on a particular occasion and under particular circumstances, his exact meaning can be easily determined; and the fact that the word has a vague generic denotation is not his fault; the fault lies with the original convention that fixed that denotation; and as this convention is fixed by persons other than the particular speaker who uses the word, he cannot be blamed for making use of such a word : blaming him for it is altogether unfair.—*Tatparys*.

it always brings about the comprehension of a particular thing; and any indication by it of a generic thing would be absolutely improper."

By no means, we reply. The use of a generic term and the denoting by it of generic things is quite possible, when the term is used by itself, and there are no such specificatory conditions as a particular context, &c. That is to say, when such a sentence as 'Shv2!o dhavaii' is pronounced without reference to any context, &c., the person merely hearing it thus pronounced is naturally confused (as to the exact meaning of the sentence—whether it means 'Shv2!o dhavaii', 'the dog is running from here,' or as meaning 'Shv2!ah the white-skinned man, suffering from leucoderma, dhavaii', 'washes']; and when there is this confusion, he assigns to it a meaning that was not intended by the speaker, and then opposes the statement. Similarly in the case of an ambiguous word.

The Salra has introduced the term 'Arlha', 'meaning,' with a view to preclude the word; as Casuistry always pertains to the meaning of words, and not to the words themselves; for instance, in the case in question the Casuist cannot offer his opposition in the form 'the word that you are using is not navakambala.'

'The meeting of Casuistry is in the following manner :---Whether the opposition is offered knowingly or unknowingly, ----in either case it is highly improper; that is to say, if the casuist actually knows what the term 'navakambalah' means (in the particular context), and yet he urges that 'the boy is not navakambala', then he urges something entirely foreign to the subject, thus becoming subject to the Clincher of 'Arthāntara, 'Irrelevancy'; for he comprehends one meaning and urges an altogether different meaning;----if on the other hand, he offers the opposition without knowing what the word actually means, he becomes subject to the Clincher of 'Ignorance.'

#### Sūfra (13).

(B) GENEBALISING CASUISTBY CONSISTS IN THE URGING OF AN ABSURD SIGNIFICATION, WHICH IS BENDEBED POSSIBLE BY THE USE OF A TOO GENEBIC TERM-(Sūtra 13).

#### Bhūşya.

#### [P. 56, L. 16 to P. 57, L. 10.]

When one man says—'Oh, this Brāhmaņa is endowed with learning and character', and another replies—'learning and character are quite natural to a Brāhmaṇa',—the latter assertion is met by opposition, by assigning to the word ('Brāhmaṇa') a meaning other than the one intended,—that is by assigning to it an entirely absurd meaning;—this opposition being in the following. form—'If learning and character are natural to the Brāhmaṇa, then they should be found in the delinquent Brāhmaṇa\* also; as he also is a Brahmaṇa'.

That word is called 'too generic' which, while applying to the thing desired to be spoken of, also over-reaches it; e. g. the Brahmanahood—which is denoted by the term '.Brāhmana'—is sometimes found to be concomitant with 'learning and character', and sometimes it is found to over-reach it, i. e. not concomitant with it. And as the opposition offered is based upon this 'too generic' character of the term used, it has been called the 'Generalising Casuistry.'

This Casuistry is to be met by pointing out that what the speaker (of the second sentence) means is not to propound a reason (for what the previous speaker has said with regard to a particular Brāhmaņa being endowed with learning and character), but only to make a reference (i. e. a representation of what has been asserted in the previous sentence); as the second assertion is meant to be mere praise (of the particular Brāhmana mentioned in the preceding sentence); so that there is no room for the assigning of the absurd signification. For instance, when one says 'corns grow in this field', another man may say 'in this field even seeds do not have to be sown,'—it is

<sup>&</sup>lt;sup>o</sup> The Brähmana who has not gone through the rites and ceremonies essential for all Brähmanas is called a 'vraty's ' delinquent.'

certainly not meant that seeds are not to be sown in the field; and yet what is said clearly is that they are not necessary; and by this the field, which is the receptacle of the growing corn, is praised; so that the assertion 'seeds do not have to be sown in this field' is meant to be a reference to the particular field with a view to praise it; and though the growing of the corn depends upon the seeds, this is not what is meant to be expressed by the seutence. Similarly in the case in question, by the assertion 'learning and character are only natural to the Brahmana what is meant is that the particular Brahmana possesses learning and character, and not that he possesses them because he is a Brāhmaņa; what is meant to be expressed is not the cause (of the man's possessing learning and character); the assertion is a reference to a particular object, which it is meant to eulogise; the meaning being that 'it is because the man is a Brahmana that the causes beinging about learning and character have become effective; so that when the man praises the particular object, he does not deny the operation of causes leading up to the result (that makes the object worthy of that praise). Thus it is not right to offer opposition to the assertion by assigning to it an absurd signification.

### Vārļika on Sū. 13,

# [Page P. 179, L. 13 to L. 17.]

Generalising Casuistry &c.—says the Sūtra. A word is said to be 'too generic' when it over-reaches what is intended to be spoken of. Example: 'The Brāhmaṇa is endowed with learning and character'; the Opponent opposes this statement by urging that the fact of being a 'Brāhmaṇa' cannot be the cause of the possession of *learning and character*. This opposition is met by showing that the assertion means something entirely different,—being meant to be a praise, and not the statement of a cause. And further, this opposition also is open to the two-fold objection (urged above in connection with first kind of Casuistry, at the 'end of the Vārlika) based upon its having been urgel knowingly or unknowingly (in either case the opposition being subject to a Clincher).

# Safra 14.

(C) A STATEMENT BEING MADE ON THE BASIS OF THE SECONDARY (FIGURATIVE) DENOTATION OF WORDS, IF IT IS OPPOSED BY A DENIAL OF THE EXISTENCE OF WHAT IS ASSERTED (ON THE BASIS OF THEIR PRIMARY DENOTATION),—THIS CONSTITUTES FIGURATIVE (OR SHIFTING) CASUISTRY.\* SQ{ra 14.

#### Bhūşya.

### [P. 57, L. 12 to P. 58, L. 3.]

By the term 'dharma' in the Sūtra is meant that property of the word which consists in its use in accordance with its primary denotation; but sometimes [when the primary denotation is found inapplicable] this property (usage) becomes subject to option (in the shape of a second denotation); and this secondary usage consists in using a word, which has been found to have one primary denotation, in a sense different from that denotation;—and when a statement is made in accordance with this secondary denotation, we have what has been called in the Sūtra 'dharmavikalpanirdesha'. E. g. When the statement is made 'the platforms are shouting', (which is

The explanation of the Safra provided by the Nyāyasāfrāvivaraņa is as follows: 'Dharma' stands for one of the two denotations of a word-primary or secondary; -fasya, 'of that'-viridhah kalpah, 'more than one alternative meaning'-yafra, 'in which'; nirdēshē, vādyukļashabdē-safi i.e., the words used by the first party being such as admit of more than one meaning';-'ar{hasadbhāvēna, tādrishaika{araoriffyā sadar{hatālparyaprayuk{avākyē, aparavīffyā ar{hāntaratā{paryakalpanayā pratishēdhoh,-the statement declaring the existence of a thing by one denotation, if the existence of that is denied in accordance with the other denotation,-it constitutes fgurative casuistry.

† The words of the Bhäşya are ' fasya girdishë', 'when there is a statement of that'-i. e. of the secondary meaning; but as the statement is not of the meaning, the  $T^{a}tporya$  has taken the words to mean 'fena'-'dharmavikalpina'-'nirdishë'-'vakyë'; so that the meaning is 'when there is statement in accordance with the secondary meaning.' The *Parishuddhi* remarks that all this twisting of the words of the *Bhäşya* has been done with a view to reconcile the *Bhäşya* to the Variska. But we fail to see much difference between the two.

The meaning of the Sūtra is not quite clear; the translation is in accordance with the explanation given by the *Bhāsya*; according to the *Vās ţika* (on Sū. 16, below), the term **uning with a first** where means 'the denial of the presence of the thing'; and this suggests to the mind a very much simpler interpretation of the Sūtra itself: 'when the statement is made in regard to the **univ** *property*, of a thing, if this is opposed by the denial of the *thing* itself, we have the Shifting Casuistry'. This appears to be more in keeping with what follows in the next two Sūtras; and it is also supported by the *Vācţika* (P. 180, L. 13) where it says that in the Shifting Casuistry what is denied is the object' the thing, 'dharmin. Though this statement, not being found to be in keeping with the interpretation of the Bhāşya, has been twisted by the *Tātparya* and the *Pari-shuddhi* to mean something totally different.

made on the basis of the secondary meaning of the term 'platforms', which here stands for the men on the platforms); and it is opposed by a denial on the basis of the primary meaning [i. e. taking the word as if it had been used in itsprimary denotation],—this denial being in the form 'Certainlyit is the men seated on the platforms that are shouting, andnot the platforms themselves.'

"But in this case, where is 'the assumption of a contrary meaning' [which, according to Satra 1-2-10] is a necessary condition in all Casuistry]?"

It consists in assigning to the word a meaning different from that with reference to which it has been used; *i.e.*, the word having been used in reference to its secondary meaning, the Opponent assigns to it the primary meaning;—and as this Casuistry pertains to the figurative or secondary signification of words, it is called 'Figurative Casuistry.'

What is meant by 'upachāra', 'secondary or figurative denotation' is that meaning which is indicated by such causes as association and the like; and we have the *figurative use* of a word only when there is such a meaning indicated by association &c. [so that figurative significations cannot be had recourse to at random].

This third kind of Casuistry is met in the following manner :--- Whenever a statement is made, a concurrence with. or denial of, the words used, and their significations, should be in accordance with the intention of the person making that statement,-and not at random, according to one's own wish.\* It is well known in ordinary parlance that a word may be used either in its primary direct sense or in its secondary figurative sense; and when such usage is generally accepted, † if a certain word is used, the concurrence with it. or the denial of it, should be in keeping with the speaker's intention, and not at random; so that when the speaker uses a term in its primary sense, the concurrence with, or denial of, his statement should be in reference to that sense of his words. and not in reference to any sense that the Opponent may choose to impose upon it; similarly if he uses the term in its secondary sense, it is this sense that should be concurred with or denied. On the other hand, when the speaker uses a term

+ The Puri MS. reads wa stat

<sup>•</sup> The Tatparya takes **u-qa**: to mean **u-qa**, by trick. But the ordinary meaning of **u-q** appears to be more suitable. The sense is that you should concur with, or deny, the statement in the form and in the sense in which it is made by the speaker, and you are not to impose your own reading or year own interpretation on it.

in its secondary sense, and his Opponent denies it in reference to its primary sense, —then this denial becomes a mere arbitrary denial, and it cannot be regarded as an opposition to the first party.

Vārļika on SR. 14.

[P. 179, L. 20 to P. 180, L. 5].

A statement being made etc. etc.—says the Sūțra. What the term '*dharmuvikalpanirdēshē*' means is that a word has

Var. P. 128. a twofold signification—the primary and the secondary; e. g. the word 'platform' pri-

marily signifies a structure reared up by bringing together pieces of wood; but when (as occurring in the statement 'the platforms are shouting') that primary signification is found to be incompatible by reason of the impossibility of the action of shouting belonging to the wooden structure, the word is applied to the persons seated on the structure (to whom the shouting is applicable); and this forms the 'secondary ' signification of the word. Such is the ordinary method of using words; now if one were to oppose the statement made by attributing to it a meaning at variance with the said method, —it would constitute what is called 'Figurative Casuistry.'

This form of Casuistry also is open to the aforesaid retort of having been put up consciously or unconsciously &c. (see end of Vartika on Sū. 12).

Sūțra (15).

[An objection is raised]-

"FIGURATIVE CASUISTRY IS ONLY VEBBAL CASUISTRY; AS IT DOES NOT DIFFER FROM IT."

### Bhāṣya.

## [P. 58, L. 5 to L. 7].

[An objection is raised]—"Figurative Casuistry does not differ from Verbal Casuistry; as the assigning of a different meaning (from the one intended by the speaker) is common "to both. For instance, in the example cited, ---in the state-"ment 'the platforms are shouting,' the word ('platform') in-"tended to be taken in the secondary sense of *the persons* occu-"pying the place (on the platform) is assumed to have the "primary sense of the *place* itself; and the opposition offered "is based upon this assumption."

### Vartika on Su. 15.

[P. 180, L. 8 to L. 9].

"Figurative Casuistry is regarded to be the same as "Verbal Casuistry, because of there being no difference between "the two. In what does the non-difference consist? It "consists in this, that, just as there is assumption of a different "meaning in the case of Verbal Casuistry, so is there also in "the case of Figurative Casuistry."

> Sā (ra (16). [Answer]—

IT IS NOT SO; AS THERE IS A DIFFERENCE IN JT.

Bhūşya.

### (P. 58, L. 9 to L. 11].

[The answer to the objection urged in the preceding Salra is that] Figurative Casuistry is not the same as Verbal Casuistry; as in the former, the denial of the presence of the thing constitutes a difference. "Difference from what?" From the mere assumption of a different meaning (which is found in Verbal Casuistry); as a matter of fact the 'assumption of a different meaning' is one thing, and the 'total denial of the presence of the thing denoted' is something entirely different.

Vārțika on Su (10).

[P. 180, L. 9 to L. 13].

The Saira points out that the reason that has been urged in the preceding Saira—' because there is no difference' is one that is unknown,—i. e. untrue. "Why is the reason untrue?" Because in the case of one (i. e. Figurative Casuistry) what is denied is the existence of the denoted thing,—the meaning of the denial being that there are no such things as shouting platforms;—while in the other case (i. e. in the case of Verbal Casuistry) the presence of the thing itself is admitted,—the possession by the boy of the blanket being accepted,—and what is denied is only the blankets' property of 'numerousness'; so that in one case • the thing is denied, while in the other the property; and this fact constitutes a tremendous difference.

# Sū[ra (17).

#### Bhāşya.

### [P. 58, L. 13. to L. 16.]

What the Opponent in Satra 15 has done is to accept the twofold division of Casuistry and to deny the third kind; this denial being on the ground of some sort of a similarity (between the third and the first kinds). But just as this reason (the presence of some sort of similarity) serves to set aside threefoldness, so ought it to set aside twofoldness

The following explauation by the Tatparya is noteworthy: —In the sentence' the platforms are shouting', the shouting is predicated of the platforms, whereby the shouting is the predominant factor and platform the subordinate factor; that is why the secondary figurative usage applies to the 'platform', and not to the shouting;—hence when the Casuist offers his opposition in the words ' the platforms certainly do not shout', what is donied is the shouting, the predominant factor. This is what is meant by the Vārţika saying that the thing itself is denied. In the case of the statement 'this boy is narakambala'—the 'navakambala' is prodicated of the boy; and what the Casuist denies is not the entire 'navakambala', but only the qualifying part of it 'nava.' So that in the former case the entire predicate, and in the latter only a part of the preducate, is denied. This constitutes the ' tremendous difference.'

The Parishuddhiremarks that the above explanation has been provided by the **Taiporya** in view of the fact that what the words of the Variika apparently mean is not quite right. It is not true that in one case it is the thing that is denied, and in another the property; because the shouting is as much a property of the platform, as the sumerousness is of the blanket.

also; as there is some sort of similarity between these two (first and second kinds) also. If the mere presence of some similarity cannot do away with the twofold division, then it should not do away with the threefold division either.

### Vārļika on Sū. 17.

## [P. 180, L. 17 to P. 181, L. 2.]

If the two etc.—says the Sū/ra. "What is the meaning of this Sutra?" The meaning is that sheer incongruity sets aside the twofold division also, which division is admitted by the Opponent. "By what reasoning do you make out that the twofold division is admitted ?" When it is asserted that 'Figurative Casuistry is the same as Verbal Casuistry,' it is implied that the Generalising Casuistry (the second kind of Casuistry) is something different (from Verbal Casuistry). And (if the twofold division is set aside, and all Casuistry is held to be of one and the same kind; then) the specification becomes entirely useless; that is to say, if the opinion held by our opponent is that all Casuistry is of one and the same kind. then, in that case, the specification (made in Sūtra 15)-that 'Figurative Casuistry is the same as Verbal Casuistry, because there is no difference' [which puts forward the non-difference of only two out of the three kinds]-becomes entirely meaningless.

"But in what way could all kinds of Casuistry become regarded as one only ?"

If the presence of some sort of similarity were to establish identity, then there would be only one kind of Casuistry; as

Var. P. 181. there is some sort of similarity among all the three kinds, they should all become of one kind only; as there is some sort of similarity among all of them.

"What is that similarity?"

The similarity consists in the 'opposing of the assertion' and in the 'assuming of a different meaning,'-these two conditions being present in all kinds of Casuistry, [as declared in Su. 1-2-10].

### LECTURE (4).

[Sūtras 18-20.]

Defects of Reasoning due to the Incapacity of the Reasoner.

BHASYA ON SU, 18.

## [P. 58, L. 17 to P. 59, L. 3.]

Next to Casuistry-

(Sūţra 18.)

FUTILE REJOINDER IS THAT OBJECTION WHICH IS TAKEN ON THE BASIS OF MERE<sup>\*</sup> SIMILABITY AND DISSIMILABITY. (Sūţra 18.)

When a certain reasoning has been put forward, the objection to it that follows, takes birth  $(j\bar{a}yat\bar{v})$ —is called 'Jáți', 'Futile Rejoinder.' This objection is in the form of opposition, an attack, a denial,—on the basis of similarity and dissimilarity. That is to say, when the Probans put forward by the first party is one that is intended to prove the conclusion through its similarity to the Example,—and an objection is taken on the basis of its dissimilarity (to that Example.);—or when the Probans put forward is intended to prove the conclusion through its dissimilarity to the Example,—and an objection is taken on the basis of its similarity to the Example,—and an objection is taken on the basis of its similarity to the Example,—and an objection is taken on the basis of its similarity to it;—we have what is called 'Jāți' (Futile Rejoinder),; because it comes up—is born —as an opponent (to the original reasoning).†

• The Nyāydsāţravivarana explains that Futile Rejoinder is that which is urged on the basis of similarity and dissimilarity only,—i. e. irrespective of any idea of invariable concomitance; in fact, it continues, 'similarity and dissimilarity' do not enter into all cases of Futile Rejoinder; as is clear from the definitions and examples provided under Adh. 5; it makes a Futile Rejoinder when no notice is taken of invariable concomitance. This is what has led the modern Logicians to define Jāți, Futile Rejoinder, simply as 'asaţ uțțaram', 'wrong answer ', i. e. an answer which is either incapable of shaking the opposite view, or which is vitiated by selfcontradictions.

The *Tâţparya* has an interesting note. It is not always reprehensible to put forward a Futile Rejoinder; for instance, when a man, upholding the authority of the Veda, is met by a series of arguments against its authority, and at the spur of the moment he does not find proper answers to these arguments, he is fully justified in urging what is really a Futile Rejoinder, if he feels that by so doing he will stave off the atheistic tendency of the audience produced by his opponent's arguments. But in other cases a Futile Rejoinder is urged only unknowingly.

 $\dagger$  In view of the real nature of soveral Futile Rejoinders—which are not urged on the basis of a similarity or dissimilarity to any *Example* at all,—the *Vartika* says that when the *Bhāya* talks of similarity or dissimilarity to the Example, it is only by way of illustration. As there are several Futile Rejoinders that are urged on the basis of similarity or dissimilarity to other things also. Vārļika on Su. 18.

## [P. 181, L. 4 to L. 11.]

Futile Bejoinder is that gc. gc.—says the Sūtra. By speaking of the 'objection taken on the basis of similarity,' and of the 'objection taken on the basis of dissimilarity', what is meant is that it is urged against the right view expounded by the first party;—the sense being that when the arguments in support of a view have been propounded, there is a stand made against that view; and this standing against is as if it were an opponent set up against it.

The Sülra should be taken as it stands, and not as indicating the 'similarity and dissimilarity to the Example' (as the Bhāşya has taken it). "Why do you lay stress on this ?" Because we wish to make the definition provided by the Sūtra applicable to all cases of Futile Rejoinder. As a matter of fact, every kind of Futile Rejoinder becomes included only when we take it as it stands,-taking it as indicating ' similarity ' and 'dissimilarity 'to anything (not necessarily to the Example only). If a definition does not include all that it is intended to include, it is regarded as defective [and this would be the case with the definition provided by the Sūtra if it were interpreted according to the Bhasya ; as, in that case, it would not include all those cases of Futile Rejoinder which are urged on the basis of similarity and dissimilarity to things other than the Example], It is only by way of illustration that the Bhāsua should be taken as speaking of similarity and dissimilarity to the Example; the sense being that, just as objection is taken on the basis of similarity and dissimilarity to the Example, so it is urged also on the basis of similarity and dissimilarity of other things [and it should not be taken as restricting the definition to only such objections, as are taken on the basis of similarity and dissimilarity to the Example only].

### Sū[ra (19).

IT IS A CASE OF CLINCHER WHEN THERE IS MISAPPREHENSION, AS ALSO WHEN THERE IS INCOMPREHENSION.<sup>®</sup> (Sū. 19.)

### Bhāsya.

# [P. 59, L. 5 to L. 8.]

'Misapprehension' is that comprehension which is either wrong or reprehensible.<sup>+</sup> The man who misapprehends things becomes defeated; and 'Clincher' consists in this defeat. It is a case of 'incomprehension' when, the subject being one on which something has to be said, if the person does not say anything; that is, for instance, if he either does not oppose what has been sought to be proved by the other party, or does not meet the objections that have been urged against himself.

The non-compounding (of the words '*viprațipațți*,' and '*aprațipațți*,', whose compounding would have made the Sūțra terser) is meant to indicate that these two are not the only Clinchers [there being several others, as described in detail in Adi. V, all which become implied by the use of the particle 'cha'].

### Vārțika on Su. 19.

## [P. 181, L, 12 to L. 19.]

It is a case of Olincher etc.—says the Sāļra; when a thing really exists, or is described, as different (from the man's own idea of it), there is either 'incomprehension' or 'misapprehension'. There are two kinds of 'incomprehen-

• The Parishuddki, not satisfied with the Safra as it stands, takes it as implying the following generalised definition :-- 'When a controversy has been started, any action that is indicative of either party's ignorance constitutes a *Clincher*.' It further says that Clincher is treated of last, as it puts an end to all controversy; no further discussion can proceed when once one of the parties falls into a Clincher.

 $\dagger^{\circ}A$  misapprehension is called simply 'wrong', when the subject-matter is something too subtle to be grasped by an ordinary intellect; it is called 'repreheusible' when it pertains to something gross, an ordinary thing quite within the range of ordinary minds.—*Tāțparys*. sion'--(1) that non-cognizance in which the predominating element consists of what the other party has said [when, for instance, the man fails to comprehend the proofs adduced by the other party, or the objections urged by him], and (2) that non-cognizance in which one's own part forms the predominating element [when, for instance, the man fails to find arguments for meeting the objections urged by the other party].

"It is possible for a Clincher to be urged even where the "man has put forward a sound argument; how then can "Clincher be said to be indicative of 'misapprehension' or "incomprehension' [as the reasoning being a sound one, it "should be taken *ipso facto* to have been urged with full know-"ledge and due comprehension of the issues involved]. That "is to say, it may so happen that a man supports his conten-"tion by a perfectly sound argument, and yet when his op-"ponent meets him with a Futile Rejoinder, he becomes con-"founded and fails to find the proper answer to that rejoin-"der;—how can this be said to be a case of either 'misappre-"hension' or 'incomprehension?"

Even in such a case there would be (a) 'incomprehension' and (b) 'misapprehension' consisting in the man (a) not comprehending the soundness and strength of his own arguments, and (b) in his regarding his own sound arguments as unsound.

> Bhāşya on Sūļra (20). [P. 59, L. 8 to L. 17].

A question arises—" Example has been described as of one kind only; are Futile Rejoinder and Clincher also each of one kind only? Or are these of diverse kinds, like Doctrine?" The answer to this is provided in the following Sūţra.—

Satra 20.

THERE IS A MULTIPLICITY OF FUTILE REJOINDERS AND CLINCHERS, OWING TWO THERE BEING SEVERAL AND DIVERSE VARIETIES OF BOTH. (SQ. 20). As 'Objection taken on the basis of similarity and dissimilarity' can be of several diverse kinds—there must be several varieties of Futile Rejoinder. Similarly as 'misapprehension and incomprehension' are of several diverse kinds, there must be several varieties of Clincher also. The term 'vikalpa' stands for several varieties or diverse varieties.

As examples of the diversity of Clinchers (defined in Sū. 5, 2.1-24)—the Clinchers of Ananubhāṣaṇa, Ajñāna, Aprațibhā, Vikṣēpa, Maţūnujňā and Paryanuyojyoj ēkṣaṇa, are indicative of incomprehension; while the rest are indicative of misapprehension.

Thus have Pramana and other categories been (a) 'mentioned' (in Sū. 1.1.1) and (b) 'defined' in the order of their mention; and they will (in the next four Adhyāyas) be (c) 'examined' in accordance with their definitions. Thus is the threefold function of the Scientific Treatise to be regarded as duly fulfilled.

Thus ends the first Adhyāya of Vātsyāyana's  $Bh\bar{a}sya$  on the  $Ny\bar{a}ya-S\bar{u}ta$ .

Vārțika on Sū. 20.

[P. 182, L. 1 to L. 11.]

There is a multiplicity, etc. etc.—says the Sū{ra. This Sūtra is meant to indicate how many kinds of Futile Rejoinder and Clincher there are ; and what is meant is that, inasmuch as objections taken on the basis of similarity and dissimilarity are several and diverse, there are many kinds of Futile Rejoinder ;---and inasmuch as incomprehension and misapprehension are several and diverse, there are many kinds of Clincher. As regards the question-as to which kinds of Futile Rejoinder are urged on the basis of similarity, and which on the basis of dissimilarity,-and as to which kinds of Clincher are indicative of misapprehension and which of incomprehension,-all this should be found in their proper places, where they are described in detail in connection with their detailed definition (in Adh. 5).

Thus have Pramana and the other categories been 'mentioned' and 'defined.' And the 'Examination' of these, in accordance with this mention and definition, will follow.

'In this first Adhyaya have been described—(a) the main theme of philosophy (embodied in Sü. 1.1.1.), (b) the process of metempsychosis (described in Sü. 1.1.2), (c) the cessation of metempsychosis by Knowledge (described in Sū- 1.1.2), and (d) the mention and definition of the several categories (described in the rest of the Adhyāya).

Thus ends the first Adhyāya of Udyoṭakara's  $V\bar{a}r$ {ika on the Ny $\bar{a}yas \hat{u}$ {ra-Bh $\bar{a}sya$ .

MOTILAL BANARSIDASS

#### THE NYÄYA SÜTRAS OF GAUTAMA Translated by Satisa Chandra Vidyābhūsaņa Revised and edited by Mindlal Sinha

The present edition has the following special features. It contains (1) the Sanskrit Text (Sūtra) in Nagari characters, followed by (2) the meaning of each and every word of the Sūtra, (3) English translation of the Sūtra and (4) its exposition. It also has six useful Appendices. App. A contains the Nyāya Sūci Nibandhana of Vācaspati Miśra in English translation. App. B gives the Sūtras omitted in the second edition. App. C contains a summary of Vātsyāyana's Bhāsya in English. App. D gives an alphabetical list of the Sūtras. App. E gives the Word Index to the Nyāya Sūtras. And App. F contains the Index of Words in English. Rs. 80

#### ENCYCLOPEDIA OF INDIAN PHILOSOPHIES: Vol. II Nyāya-Vaišeşika Ed. Karl H. Potter

The volume provides a detailed resumé of current knowledge about the classical Indian philosophical System of Nyāya-Vaišeşika in its earlier stages. It covers the literature from the beginning, i.e. the Sūtras of Gautama and Kaṇāda upto the time of Gaṅgeśa (c. 1350 A.D.).

Herein are included summaries of the major works of the school such as Nyāya Sūtras of Gautama, Vaišeşika Sūtras of Kaņāda, the Bhāşyas of Vātsyāyana and Prasastapāda, the Vārttika of Uddyotakara, and the works of Udayana, Vācaspati Miśra, Jayanta, Śrīdhara, Bhāsarvajña, Varadarāja, Śivāditya, Kesavamiśra and others.

These summaries are arranged in a relative chronological order to assist the reader in tracing the development of the school's thought. Scholars around the world have collaborated in the undertaking. Rs. 150

#### GAUTAMA : THE NYÂYA PHILOSOPHY N. S. Junankar

In this study of Nyāya Philosophy as propounded by Gautama and explained by Vātsyāyana and Uddyotakara the author has examined the empirical foundations of its theory of cognition and proof and the validity of the conclusions based on them. The analysis reveals that the Nyāya theory does not warrant the nature, career and destiny of the self (Ātman). The conceptual framework rests upon the questionable assumption that not only is the experience of the expert (āpta) incorrigible but his communication of that experience is authentic. The study is both a challenge to the traditional presentation of the Indian cultural heritage and a constructive hypothesis for further research and re-appraisal on new lines. Rs. 130
